Stadtkonzepte**

1908/2008 ; urban concepts 1908/2008 ; [anlässlich der Ausstellung Multiple City - Stadtkonzepte 1908/2008, Pinakothek der Moderne München, 4. Dezember 2008 - 1. März 2009] John Wiley & Sons

This book, filled with gorgeous photographs, explains the theory, history, and intricacies of Japanese gardening. The creation of a Japanese garden combines respect for nature with adherence to simple principles of aesthetics and structure. In Japanese Garden Design, landscape architect Marc Peter Keane presents the history and development of the classical metaphors that underlie all Japanese gardens. Keane describes the

influences of Confucian, Shinto and Buddhist principles that have linked poetry and philosophy to the tangible metaphor of the garden in Japanese culture. Creative inspiration is found in the prehistoric origin of Japanese concepts of nature; the gardens of Heian aristocrats; the world-renowned Zen garden, or rock garden; the tea garden; courtyard garden; and stroll garden. Detailed explanations of basic design concepts identify and interpret the symbolism of various garden forms and demonstrate these principles in use today in Japanese landscape architecture. Topics include: Design Principles Design Techniques Design Elements Godspirit in Nature Poetry in

Dieses Heft
thematisiert etwas
Alltägliches und
zugleich
Lebensnotwendiges:
Essen. Dabei geht es
uns um mehr als
Nahrungsaufnahme.
Was wir essen und mit
wem wir essen, kommt
immer auch einem
Statement gleich. Wir
bieten Ihnen in diesem
Heft diese
unterschiedlichen
Facetten zum Thema
gleichsam wie ein
Buffet an und hoffen,
dass es für Sie
Genussvolles
bereithält. In den
Eingangsbeiträgen
thematisieren Daniel
Kofahl und Guido Fuchs
aus
ernährungssoziologisch
er und theologischer
Perspektive

Zusammenhänge von Essen und Religion, von Fest und Mahl. Der Mediziner Michael H. Schoenberg weist darauf hin, wie wichtig die richtige Ernährung während und nach einer Krebstherapie ist. Essen in einem Kirchenraum anzubieten ist Ausdruck einer Kirche, die ihren Standpunkt vor Gott und den Menschen in der Welt gefunden hat. Konkret wird dies, wie Ilka Sobottke berichtet, im Projekt Vesperkirche in Mannheim. Im Interview mit Oliver Raferzeder erfahren wir vom Mut eines jungen Unternehmers, eine Bäckerei zu eröffnen, damit Brot wieder seinen Wert bekommt. Der Exeget Martin Ebner zeigt auf, dass das gemeinsame Mahl ein wesentliches

und herausforderndes Identitätsmerkmal für Christ/innen ist. Weil Menschen zur Befriedigung ihres Hungers Leben zerstören, ist es erforderlich darüber nachzudenken, wann und wie dieses Handeln gerechtfertigt werden kann. Dieser Fragestellung geht der Moraltheologe Michael Rosenberger in seinem Beitrag nach. Andrea Trenkwalder-Egger beschreibt, wie die Gabenökonomie in der US-amerikanischen Zivilgesellschaft umgesetzt wird und welche Impulse daraus für die soziale Arbeit gezogen werden können. Um eine gute Produktion von Nahrungsmitteln, die auf den Bauernhöfen ihren Anfang nimmt, gewährleisten zu können, braucht es

nach Meinung von Josef Holzbauer nicht nur einen Struktur-, sondern einen Kulturwandel. Essen hält Leib und Seele zusammen, aber es kann auch ein Bereich sein, in dem sich Konflikte und Störungen manifestieren. Anna Steinpatz beschreibt die Dynamiken von Essstörungen und geht dabei auch der Frage nach, wie Theologie und Pastoral darauf reagieren können. Als Nachschlag darf ich Ihnen die Beiträge von Ilona Nord über inklusives Predigen und den Beitrag von Tilman Allert über den Kaugummi empfehlen. Liebe Leser/innen, es ist für Sie aufgetischt.

Discard Studies

Verso Books

Winner of the EDRA

book prize for 2012. In

cities around the world, individuals and groups are reclaiming and creating urban sites, temporary spaces and informal gathering places. These 'insurgent public spaces' challenge conventional views of how urban areas are defined and used, and how they can transform the city environment. No longer confined to traditional public areas like neighbourhood parks and public plazas, these guerrilla spaces express the alternative social and spatial relationships in our changing cities. With nearly twenty illustrated case studies, this volume shows how instances of insurgent public space occur across the world. Examples range from community gardening

in Seattle and Los Angeles, street dancing in Beijing, to the transformation of parking spaces into temporary parks in San Francisco. Drawing on the experiences and knowledge of individuals extensively engaged in the actual implementation of these spaces, *Insurgent Public Space* is a unique cross-disciplinary approach to the study of public space use, and how it is utilized in the contemporary, urban world. Appealing to professionals and students in both urban studies and more social courses, Hou has brought together valuable commentaries on an area of urbanism which has, up until now, been largely ignored.

Henri Lefebvre and the

Theory of the Production of Space
Penguin

The modern idea of 'mastery' over nature always had its critics, whether their motives were aesthetic, religious or environmentalist. By investigating how the most fundamental element - water - was 'conquered' by draining fens and marshes, straightening the courses of rivers, building high dams and exploiting hydro-electric power, *The Conquest of Nature* explores how over the last 250 years, the German people have shaped their natural environment and how the landscapes they created took a powerful hold on the German imagination. From Frederick the Great of Prussia to

Johann Gottfried Tulla, 'the man who tamed the wild Rhine' in the nineteenth century to Otto Intze, 'master dambuilder' of the years around 1900, to the Nazis who set out to colonise 'living space' in the East, this groundbreaking study shows that while mastery over nature delivers undoubted benefits, it has often come at a tremendous cost to both the natural environment and human life.

PERMANENT PUBN

A Journey Back to

Nature

Studies in German Literature of the Nineteenth and Twentieth Centuries

Legare Street Press

Shortlisted for the

Deutscher Memorial

Prize 2023 This book

presents an

encompassing, detailed and thorough overview and reconstruction of Lefebvre's theory of space and of the urban. Henri Lefebvre belongs to the generation of the great French intellectuals and philosophers, together with his contemporaries Michel Foucault and Jean-Paul Sartre. His theory has experienced a remarkable revival over the last two decades, and is discussed and applied today in many disciplines in humanities and social sciences, particularly in urban studies, geography, urban sociology, urban anthropology, architecture and planning. Lefebvre, together with David Harvey, is one of the

leading and most read theoreticians in these fields. This book explains in an accessible way the theoretical and epistemological context of this work in French philosophy and in the German dialectic (Hegel, Marx, and Nietzsche), and reconstructs in detail the historical development of its different elements. It also gives an overview on the receptions of Lefebvre and discusses a wide range of applications of this theory in many research fields, such as urban and regional development, urbanization, urbanity, social space, and everyday life.

Terry Eagleton's book,

in this vital new series from Blackwell, focuses on discriminating different meanings of culture, as a way of introducing to the general reader the contemporary debates around it.

Gartenbuch Springer

This volume provides the most current research on smart cities. Specifically, it focuses on the economic development and sustainability of smart cities and examines how to transform older industrial cities into sustainable smart cities. It aims to identify the role of the following elements in the creation and management of smart cities: • Citizen participation and empowerment • Value creation mechanisms • Public administration •

Quality of life and sustainability•
 Democracy• ICT•
 Private initiatives and entrepreneurship
 Regardless of their size, all cities are ultimately agglomerations of people and institutions. Agglomeration economies make it possible to attain minimum efficiencies of scale in the organization and delivery of services. However, the economic benefits do not constitute the main advantage of a city. A city's status rests on three dimensions: (1) political impetus, which is the result of citizens' participation and the public administration's agenda; (2) applications derived from technological advances (especially in ICT); and (3)

cooperation between public and private initiatives in business development and entrepreneurship. These three dimensions determine which resources are necessary to create smart cities. But a smart city, ideal in the way it channels and resolves technological, social and economic-growth issues, requires many additional elements to function at a high-performance level, such as culture (an environment that empowers and engages citizens) and physical infrastructure designed to foster competition and collaboration, encourage new ideas and actions, and set the stage for new business creation. Featuring contributions with models, tools and

cases from around the world, this book will be a valuable resource for researchers, students, academics, professionals and policymakers interested in smart cities.

The Conquest Of Nature Verso Books
This textbook on urban ecosystems answers important questions about the ecological structure, functions and socio-ecological development of cities worldwide. Based on how cities are developing today in an increasingly urbanized world, it explains ecological challenges for cities of the 21st century such as resource efficiency, climate change, moderation of quality of life and resilience. The book combines theories of urban

development and ecology with practical applications and case studies, thus identifying potential for improvement and examples of good ecological urban development worldwide. It shows that cities are by far not only problem areas but also offer great potential for a good life and that the various urban ecosystems can make a considerable contribution to this. The "eco-city" is thus not a utopia, but a real goal that can be pursued step by step in a targeted manner, taking into account the local and regional context. Four renowned urban ecologists have contributed their specific experience in sub-areas without losing sight of the big

picture. Jürgen Breuste is an urban ecologist and works at the Paris Lodron University in Salzburg, Austria, on the topics of sustainable urban development, urban biodiversity, ecosystem services and eco-cities. Dagmar Haase is Landschaftsökologin and works at the Humboldt University of Berlin on urban ecosystem services and land use modeling. Stephan Pauleit is a landscape planner and works at the Technical University of Munich on strategies for the sustainable development of urban landscapes. Martin Sauerwein is a geographer and works at the University of Hildesheim on geo-ecology in cultural landscapes, geoarchaeology and

soil protection. The textbook addresses a broad audience of students, teachers and also to practitioners in the fields of ecology, urban ecology, urban development, sustainability, urban geography, nature and landscape conservation, spatial planning, landscape ecology, social sciences and urban studies. The numerous photos and graphics, many of them in four colors, as well as clear tables illustrate the facts. Case studies, examples and explanations allow a deeper insight. Questions at the end of each chapter allow the progress of knowledge to be checked, and a comprehensive bibliography for each chapter provides further studies. This

book is a translation of the original German 1st edition Stadtökosysteme by Jürgen Breuste published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2016. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors. An argument that social, political, and economic systems maintain power by discarding certain people, places, and things. Discard studies is an emerging field that looks at waste and wasting broadly construed. Rather than focusing on waste and trash as the primary objects of study, discard studies looks at wider systems of waste and wasting to explore how some materials, practices, regions, and people are valued or devalued, becoming dominant or disposable. In this book, Max Liboiron and Josh Lepawsky argue that social, political, and economic systems maintain power by discarding certain people, places, and things. They show how the theories and

methods of discard studies can be applied in a variety of cases, many of which do not involve waste, trash, or pollution. Liboiron and Lepawsky consider the partiality of knowledge and offer a theory of scale, exploring the myth that most waste is municipal solid waste produced by consumers; discuss peripheries, centers, and power, using content moderation as an example of how dominant systems find ways to discard; and use theories of difference to show that universalism, stereotypes, and inclusion all have politics of discard and even purification—as exemplified in “inclusive” efforts to broaden the Black Lives Matter movement. Finally,

they develop a theory of change by considering "wasting well," outlining techniques, methods, and propositions for a justice-oriented discard studies that keeps power in view.

Sense of Place, Health and Quality of Life Random House
Nirgends wachsen die Städte heute so schnell wie auf dem afrikanischen Kontinent. Seit der Unabhängigkeit, also seit den 1960er-Jahren, wurden acht neue Millionenstädte fast aus dem Nichts erbaut – von Lilongwe (Malawi) und Dodoma (Tansania) bis Abuja (Nigeria) und Yamoussoukro (Elfenbeinküste). In diesen chaotisch gewachsenen Megacitys dominiert der europäische

Modernismus. Eine »afrikanische« Architektur, ja eine afrikanische Urbanität muss erst entstehen. *AgroCity* ist ein Beitrag dazu. Reportagen aus verschieden gearteten städtischen Vororten zeigen den Unterschied zwischen Townships, Minenstädten und Slums auf. Essays beschäftigen sich mit Fragen wie: Wann wird eine Stadt eine Stadt? Wie könnte einst eine afrikanische Stadt aussehen und lebenswert sein? Wie können aus Bäuerinnen und Bauern Menschen mit urbaner Orientierung werden? Denn das Städtewachstum in Afrika ist auch die Folge einer massenhaften Landflucht, weg von übernutzten und

ausgelaugten Böden einerseits und sozialer Langeweile andererseits. Was tun in dieser doppelten Krise? Dieses Buch präsentiert Skizzen für eine städteplanerische Mischung und Versöhnung von Stadt und Landwirtschaft. Eine solche AgroCity hat südlich der Sahara durchaus eine Chance, und Al Imfelds Überlegungen bergen zahlreiche Anregungen auch zum urbanen Zusammenleben hier bei uns.

Spiel/Feld Urbane Landwirtschaft : ökologische Bildung und praxisorientiertes Entwerfen Echter Verlag

A significant body of theoretical and empirical studies describes 'sense of place' as an outcome

of interconnected psychological, social and environmental processes in relation to physical place(s). Sense of place has been examined, particularly in human geography, in terms of both the character intrinsic to a place as a localized, bounded and material entity, and the sentiments of attachment/detachment that humans experience and express in relation to specific places. Scholars in a wide range of disciplines are increasingly exploring the relationship between place and health, and recently, the field of public health has been encouraged to recognize sense of place as a potential contributing factor to well-being. It is evident

that over the last few decades, sense of place has developed into a versatile construct. This important book brings together work related to sense of place and health, broadly defined, from the perspective of a variety of fields and disciplines. It will give the reader an understanding of both the range of applications of this construct within approaches to human health as well as the breadth of research methodologies employed in its investigation.

Urban Catalyst

Rotpunktverlag
Learn about human nature, behavior and how the mind works with The Psychology Book. Part of the fascinating Big Ideas

series, this book tackles tricky topics and themes in a simple and easy to follow format. Learn about Psychology in this overview guide to the subject, great for beginners looking to learn and experts wishing to refresh their knowledge alike! The Psychology Book brings a fresh and vibrant take on the topic through eye-catching graphics and diagrams to immerse yourself in. This captivating book will broaden your understanding of Psychology, with: - More than 100 groundbreaking ideas in this field of science - Packed with facts, charts, timelines and graphs to help explain core concepts - A visual approach to big subjects with striking illustrations and

graphics throughout - Easy to follow text makes topics accessible for people at any level of understanding The Psychology Book is the perfect introduction to the science, aimed at adults with an interest in the subject and students wanting to gain more of an overview. Here you'll discover key concepts by psychologists who have significantly enhanced our understanding of the human mind and behavior. Learn about everyone who's contributed to the big ideas in psychology, incorporating the ideas of today's scientists as well those of the ancient philosophers and pioneers. Your Psychology Questions, Simply Explained If you thought it was difficult

to learn psychology and its many concepts, The Psychology Book presents the key ideas in a clear layout. Learn about the key personalities of the 19th and 20th centuries whose work has made significant contributions to our understanding of human behavior. Fantastic mind maps and step-by-step summaries explain the line of thought clearly for students of psychology and for anyone with a general interest in understanding the human mind. The Big Ideas Series With millions of copies sold worldwide, The Psychology Book is part of the award-winning Big Ideas series from DK. The series uses striking graphics along with

engaging writing, making big topics easy to understand.

When Biology Became Destiny Jovis Verlag

This open access book brings together research findings and experiences from science, policy and practice to highlight and debate the importance of nature-based solutions to climate change adaptation in urban areas. Emphasis is given to the potential of nature-based approaches to create multiple-benefits for society. The expert contributions present recommendations for creating synergies between ongoing policy processes, scientific programmes and practical implementation of climate change and nature conservation

measures in global urban areas. Except where otherwise noted, this book is licensed under a Creative Commons Attribution 4.0 International License. To view a copy of this license, visit <http://creativecommons.org/licenses/by/4.0/> Sustainable Smart Cities Chelsea Green Publishing

This revised edition focuses on the spaces of production in cities--both the modernist period and today--and the technologies that have contributed to shifts in factory architecture, manufacturing, and urban design. Vertical Urban Factory tracks the evolution of the vertical urban factory from the first industrial revolution to the present and provides an analysis of the

political, social, and economic factors that have shaped today's global industrial landscape. Ultimately, it provokes new concepts for the future of urban manufacturing, and the necessity of creating new paradigms for sustainable, self-sufficient urban industry. Illustrated with historic and contemporary photographs, manufacturing process diagrams, and infographics by MGMT Design.

Insurgent Public Space Cambridge University Press
This beautiful series lavishly illustrates the world's major fresco cycles from the early fourteenth through the seventeenth centuries. Each book also contains a

comprehensive text, a biography of the artist, a bibliography, and a glossary.

The Book of Trees

Routledge

The founder of the Garden City

Association outlines his radical new approach to urban planning. First published in 1898.

Food and the City

Prometheus Books

Reflects on urban development against the background of various urban concepts. This book documents 16 topics of urban development on the basis of texts, photographs and historical planning material. "Multiple City" reflects on current urban development against the background of various urban concepts over the past 100 years. It is possible to

trace the history of multiple manifestations, parallel strategies and diametrical developments. Urban concepts and urbanist discourse enjoy temporary booms, but leave behind enduring evidence. Today, a wide range of phenomena, interpretations and debates exist in conjunction with each

other. This publication documents 16 important topics of urban development on the basis of texts, up-to-date photographs and historical planning material. Well-known authors adopt standpoints on current urban developments in 32 essays. This book makes it possible to experience urban development as an exciting discourse that involves us all.
