Advanced machining

processes has
significant
contributions to the
manufacturing
industries, especially
since many new
invented materials
have advanced
properties, which are

difficult to machine using conventional machining processes. Therefore, advanced machining processes take a lead in dealing with these types of material. This book focuses on electrical machining and electrical dressing processes. Chapter 1 explains the electrochemical machining (ECM), includes process parameters that involved in the ECM processes. Chapter 2 deals with another advanced machining process, i.e. electro-discharge machining (EDM). Several process parameters that contribute to the EDM processes are also discussed. Electrical dressing is described in Chapter 3 as a special application of ECM and EDM. Finally, other

types of non-conventional machining are explained in Chapter 4. [UGM Press, UGM, Gadjah Mada University Press]

The book consists of a selection of papers presented at the Asia-

Pacific Research Conference on Social Sciences and Humanities. It contains essays on current legal issues in law and justice, and their role and transformation in a globalizing world. Topics covered include human rights, criminal law, good governance, democracy, foreign investment, and regional integration. The conference focused on Asia and the Pacific, two regions where law has taken an important position in creating and shaping the regional integrations, new legal institutions, and norms. This reconfirms the idea that the legal system is extremely important in the global world. This book provides new insights and new horizons on how law and justice

took part in globalizing human interaction, especially in the Asia-Pacific region. The culture of television in Indonesia began with its establishment in 1962 as a public broadcasting service. From that time, through the deregulation of television broadcasting in 1990 and the establishment of commercial channels, television can be understood, Philip Kitley argues, as a part of the New Order's national culture project, designed to legitimate an idealized Indonesian national cultural identity. But Professor Kitley suggests that it also has become a site for the contestation of elements of the New Order's cultural policies. Based on his studies, he further speculates on the increasingly significant

role that television is destined to play as a site of cultural and political struggle.

The Asian Water Development Outlook charts progress in water security in Asia and the Pacific over the past 5 years. This 2016 edition of the report uses the latest available data to assess water security in five key dimensions: household access to piped potable water and improved sanitation, economic water security, providing better urban

water services to build more livable cities, restoring healthy rivers and ecosystems, and resilience to water disasters. The region shows a positive trend in strengthening water security since the 2013 edition of the report, when 38 out of 49 countries were assessed as water-insecure. In 2016, that number dropped to 29 out of 48 countries.

The Knowledge Deficit illuminates the real issue in education today -- without an effective curriculum, American students are losing the global education race. In this persuasive book, the esteemed education critic, activist, and best-selling author E.D. Hirsch, Jr., shows that although schools are teaching the mechanics of reading, they fail to convey the knowledge needed for the more complex and essential skill of reading comprehension. Hirsch corrects popular misconceptions about

hot issues in education, such as standardized testing, and takes to task educators' claims that they are powerless to overcome class differences. Ultimately, this essential book gives parents and teachers specific tools for enhancing children's abilities to fully understand what they read.

This volume examines the ways in which the socio-economic elites of the region have transformed and expanded the material bases of their power from the inception of neo-liberal policies in the 1970s through to the so-called progressive 'pink tide' governments of the

past two decades. The six case study chapters—on Chile, Brazil, Ecuador, Colombia, El Salvador, and Guatemala—variously explore how state policies and even United Nations peace-keeping missions have enhanced elite control of land and agricultural exports, banks and insurance companies, wholesale and import commerce, industrial activities, and alliances with foreign capital. Chapters also pay attention to the ways in which violence has been deployed to maintain elite power, and how international forces feed into sustaining historic and contemporary configurations of power.

 This report reviews quality estimates between private and public secondary schools in Colombia and Tanzania. Quality is measured by student performance on standardized achievement tests. Estimated sample selection effects suggest that Colombian students sort themselves by type of institution (private or public), but Tanzanian students appear to be selected by a hierarchical mechanism, with the worst students entering private institutions. These effects are consistent with the different institutional frameworks for educational choice in these countries. For each country, private

schools offer an achievement advantage. By standardizing for differences in student and school attributes, private school students have higher achievement test scores.

Amid the lush abundance of Java's landscape, two boys spend their days exploring the vast lakes and teeming forests. But as time passes the boys come to realize that their shared sense of

adventure cannot bridge the gulf between their backgrounds, for one is the son of a Dutch plantation owner, and the other the son of a servant. Inevitably, as they grow up, they grow estranged and it is not until years later that they meet again. It will be an explosive and emblematic meeting that marks them even more deeply than their childhood friendship did.

Asian Development Bank Research and development on optical wavelength-division multiplexing (WDM) networks have matured considerably. While optics and electronics should be used appropriately for

transmission and switching hardware, note that "intelligence" in any network comes from "software," for network control, management, signaling, traffic engineering, network planning, etc. The role of software in creating powerful network architectures for optical WDM networks is emphasized. Optical WDM Networks is a textbook for graduate level courses. Its focus is on the networking aspects of optical networking, but it also includes coverage of physical layers in optical networks. The author introduces WDM and its enabling technologies and discusses WDM local, access, metro, and long-haul network architectures. Each chapter is self-

contained, has problems at the end of each chapter, and the material is organized for self study as well as classroom use. The

material is the most recent and timely in capturing the state-of-the-art in the fast-moving field of optical WDM networking.
