 European competitiveness in a global perspective is a major issue on the agenda of the European Union and European industry. The question of competitiveness is often related to continual technological change and changing work structures to create more flexible and adaptive work places. But these changes are in themselves insufficient to meet the demands of a turbulent business environment, if they are not brought about in close relationship with and anchored to the development of the human resource potential. Technological innovation and modern post-Tayloristic work structures place new demands on workers. Workers' abilities and competencies must be raised in virtually every sphere - in what are termed the new key/core

competencies related to knowledge and cognitive skills, social skills, general and work related personality characteristics together with a high level of technological ability. At the same time, to make optimal use of the human potential, the way in which work is organised and accordingly the way in which people are managed, must allow workers to develop and use the required competencies. An integrated Human Resource Development approach is needed in which workers abilities and competencies take a central place. European competitiveness, from this perspective, implies a strategic choice by European companies and policy makers to invest in people and their (potential) abilities.

Queensland Government Mining Journal Delene Kvasnicka
 Vols. for 1946-47 include as sect. 2 of a regular no., World oil atlas.

Timber

The basic magazine in a basic industry.

Modern Materials Handling

James Oliver sold his first "chilled" plow in 1870--"chilled" because the cast iron was cooled quickly with water to harden the metal and strengthen the plow. And when Oliver Chilled Plow Works merged with the Hart-Parr Company in 1929, the might of capital, expertise, and engineering resources came together to create one of the most successful and revered small tractor manufacturers of all time. This book follows the Oliver tractor from its inception through its development over the years, until the last model rolled off the assembly line in 1976. A story of entrepreneurship and industry, of machinery and American know-how, this illustrated history captures the spirit of Oliver farm equipment as its tractors and crawlers, hay balers and threshers turned American farmland to gold. Throughout, brilliant color photographs and historical images bring the story of the Oliver tractor vividly and vibrantly to life.

Pit and Quarry

Vols. for 1919- include an Annual statistical issue (title varies).

Index of Patents Issued from the United States Patent Office

Vols. 30-54 (1932-46) issued in 2 separately paged sections: General editorial section and a Transactions section. Beginning in 1947, the Transactions section is continued as SAE quarterly

transactions.
