This volume distinguishes itself from existing research on materials design, development, and evaluation, and focuses on material mediation in actual processes of teaching and learning, a subject that has been under-researched in the field of applied linguistics and second language education. This edited volume includes diverse perspectives on the roles that materials play in language learner pedagogy. Moving beyond the field of English language teaching, readers will find novel contributions offering a diversity of language teaching contexts, learner populations, and topics in the theory and/or practice of second and foreign language teaching. Chapters explore the ways in which affordances and constraints of classroom materials impact teachers and learners, while at the same time they bring their own (evolving) resources, identities, beliefs, and expertise to modify and adapt the materials to better suit their local language teaching and learning environments. As such, this text is ideal for use as supplemental reading in a wide variety of applied linguistics, second/foreign language education, TESOL, and instructional course design courses.

Tapping into the existing resources and staff available within your school, The Revitalized Tutoring Center provides an effective strategy to improve instruction and student performance. This practical guide shares the blueprint, best practices, and resources necessary to create and implement a robust, embedded tutoring center. This dynamic peer tutoring model brings together teachers, peers, and community members in a support network that identifies students in need and facilitates individualized instruction. With a peer tutoring model in place, schools are better positioned to initiate and sustain a variety of initiatives such as PLCs, RTI,

formative assessment, community partnerships, and service learning, while creating equitable access and opportunity for all. This book illustrates how instructional leaders can leverage existing resources in a sustainable and cost-effective way to implement a model that ultimately leads to cultural changes, innovation, and significant academic improvement.

Ecosystem services is one of the most powerful guiding principles for ecology, biodiversity conservation and the management of natural resources. It provides the basis of assessing the multiple values and services that ecosystems can provide to humankind, including diverse issues such as carbon sequestration, flood control, crop pollination and aesthetic and cultural services. The second edition of *Ecosystem Services: Key Issues* has been fully revised and updated to address policy and scientific developments, as well as new and emerging issues, such as nature-based solutions, zoonotic diseases and environmental justice. It includes new and updated case studies from across the world and each chapter contains further reading, learning objectives and discussion questions to aid student learning. The book details the historical roots of ecosystem services in the

second half of the twentieth century, through initiatives such as the Millennium Ecosystem Assessment, The Common International Classification of Ecosystem Services (CICES) and the United Nations Sustainable Development Goals. It shows how ecosystem goods and services can be categorised and valued in economic as well as non-monetary terms, while also highlighting some of the difficulties and limitations of valuation techniques. The author describes how themes such as systems thinking, social-ecological resilience and natural capital relate to ecosystem services, and how these can contribute to more sustainable and equitable development. This book will be essential reading for students and scholars of ecosystem services, ecology, environmental science, biodiversity conservation, environmental economics, natural resource management and sustainable development. It will also be of use to professionals and policymakers who are looking to integrate ecosystems and their services into their decision making processes.

The Business Environment Macmillan Higher Education

Now in a new edition, The Business Environment provides a unique and stimulating introduction to the subject. Outlining the classic "PESTLE" structure in Part One, it goes on to explore such key issues as globalization, sustainability, equal opportunities, and entrepreneurship in Part Two. Raise standards and improve learning for all students through equitable grading Grading—one of the most important responsibilities of teachers with major implications for students’ academic and life trajectories—is ironically also among the most enigmatic and frequently avoided topics in education. Although most teachers sense that common grading practices are often ineffective, there is limited understanding of how those practices can undermine effective teaching and harm students, particularly those historically underserved. It is long past due to implement grading practices that are more accurate, bias-resistant, and motivational, and which improve student learning, empower teachers, and transform classrooms as a result. In this newly updated edition of the best-selling *Grading for Equity*, Joe Feldman provides a valuable resource for anyone invested in grading and its impact on students’ education, mental health, and future opportunities. Offering a research-based alternative to the status quo, this practitioner-friendly guide provides Extensive revisions that reflect how the pandemic and the Black Lives Matter movement shifted traditional grading systems New data from both academic research and classrooms that demonstrate the benefits of equitable grading for all students Clear

approaches to implement equitable grading practices Updated information on several equitable grading practices, including proficiency scales A new concluding chapter that explores implementing equitable grading system-wide With a down-to-earth style driven by the author’s own curiosity as a teacher, principal, district administrator, and university instructor, this book will invite and challenge you to think about how more equitable grading, when implemented effectively, creates a more rigorous, humane, and positive school experience for all.

A Society and Environment Teachers Book A Routledge

What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of

understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of Understanding by Design apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

*Ecosystems and Human Well-Being* is the first product of the Millennium Ecosystem Assessment, a four-year international work program designed to meet the needs of decisionmakers for scientific information on the links between ecosystem change and human well-being. The book offers an overview of the project, describing the conceptual framework that is being used, defining its scope, and providing a baseline of understanding that all participants need to move forward. The Millennium Assessment focuses on how humans have altered ecosystems, and how changes in ecosystem services have affected human well-being, how ecosystem changes may affect people in future decades, and what types of responses can be adopted at local, national, or global scales to improve ecosystem management and thereby contribute to human well-being and poverty alleviation. The program was launched by United National Secretary-General Kofi Annan in June 2001, and the primary assessment reports will be released by Island Press in 2005.

Leading scientists from more than 100 nations are conducting the assessment,
