This volume in the series deals with the major Medicinal and Aromatic Plants MAPs of South America, providing information on major aspects of this specific group of plants on that continent (botany, traditional usage, chemistry, production/collection practices, trade and utilization). Brazil, in particular, offers an immense amount of biodiversity, including plants with great pharmacological interest and medicinal importance. The Amazon Basin, in northern Brazil has a highly diverse biota and still harbours a variety of unknown and unstudied plant species for medicinal values. Contributions are from internationally recognized professionals, specialists of the Medicinal and Aromatic Plant domain and have been invited mostly from the members of the International Society for Horticultural Science and International Council for Medicinal and Aromatic Plants.

This volume focuses on the intangible elements of human cultures, whose relevance in the study of archaeology has often been claimed but rarely practiced. In this book, the authors successfully show how the adoption of ethnoarchaeological perspectives on non-material aspects of cultures can support the development of methodologies aimed at refining the archaeological interpretation of ancient items, technologies, rituals, settlements and even landscape. The volume includes a series of new approaches that can foster the dialogue between archaeology and anthropology in the domain of the intangible knowledge of rural and urban communities. The role of ethnoarchaeology in the study of the intangible heritage is so far largely underexplored, and there is a considerable lack of ethnoarchaeological studies explicitly focused on the less tangible evidence of present and past societies. Fresh case studies will revitalize the theoretical debate around ethnoarchaeology and its applicability in the archaeological and heritage research in the new millennium. Over the past decade, 'intangible' has become a key word in anthropological research and in heritage management. Archaeological theories and methods regarding the explorations of the meaning and the significance of artifacts, resources, and settlement patterns are increasingly focusing on non-material evidence. Due to its peculiar characteristics, ethnoarchaeology can effectively foster the development of the study of the intangible cultural heritage of living societies, and highlight its relevance to the study of those of the past.

The new novel from the author of *As We Have Always Done*, a poetic world-building journey into the power of Anishinaabe life and traditions amid colonialism In fierce prose and poetic fragments, Leanne Betasamosake Simpson's Noopiming braids together humor, piercing detail, and a deep, abiding commitment to Anishinaabe life to tell stories of resistance, love, and joy. Mashkawaji (they/them) lies frozen in the ice, remembering the sharpness of unmuted feeling from long ago, finding freedom and solace in isolated suspension. They introduce the seven characters: Akiwenzii,

the old man who represents the narrator's will; Ninaatig, the maple tree who represents their lungs; Mindimooyenh, the old woman, their conscience; Sabe, a gentle giant, their marrow; Adik, the caribou, their nervous system; and Asin and Lucy, the humans who represent their eyes, ears, and brain. Simpson's book *As We Have Always Done* argued for the central place of storytelling in imagining radical futures. Noopiming (Anishinaabemowin for "in the bush") enacts these ideas. The novel's characters emerge from deep within Abinhinaabeg thought to commune beyond an unnatural urban-settler world littered with SpongeBob Band-Aids, Ziploc baggies, and Fjällräven Kånken backpacks. A bold literary act of decolonization and resistance, Noopiming offers a breaking open of the self to a world alive with people, animals, ancestors, and spirits—and the daily work of healing.

In this leadership memoir, take a step backstage at Cirque du Soleil. Vice Chairman Daniel Lamarre shares his experiences leading the awe-inspiring organization, and teaches readers what it takes for anyone, regardless of position or industry, to embrace the value of creative leadership. Without creativity, there is no business. At the core of Cirque du Soleil's lavish, multi-million-dollar productions is Vice Chairman Daniel Lamarre, who has mastered the ability to bring business and creativity together across multiple languages and cultures in a way that has never been seen before. The secrets he shares in *Balancing Acts* are rooted in tremendous faith in your own creative skills, even if you are convinced you have none, and those of the sharpest minds within your organization. In this book, Daniel shares the untold stories behind Cirque's biggest shows, including *Beatles Love*, *Michael Jackson One*, the aquatic marvel, *O*, and many more. Through these tales of triumph and trials, he will teach you: How to shatter the perceived limitations standing in the way of your ability to think creatively and innovatively; When to step up and when to step back so that your team can create a masterpiece that doesn't break the bank; How in using the methods Daniel has uncovered, modern companies with entrenched bureaucracies can bring creativity and business together to foster innovation; and How to use creative thinking to lead your organization to new heights. Whether you work for one of the most creative organizations on the planet like Cirque du Soleil, in a stuffy corporate job, or somewhere in between—*Balancing Acts* is filled with principles that can strengthen and accelerate any business on the planet.

Tous les médecins sont confrontés, un jour ou l'autre, à un patient souhaitant s'informer sur les possibilités de traitements non conventionnels de son affection et s'interroger sur le bien-fondé d'un traitement alternatif. Médecins et patients se posent les mêmes questions. Mais face aux allégations de " charlatanisme " concernant les pouvoirs curatifs de thérapies alternatives, comment l'un et l'autre peuvent-ils trouver des arguments cliniques ? Une démarche raisonnée s'imposait. Il était temps de mettre à la disposition des professionnels les informations les plus récentes sur la

médecine alternative origines, concepts sous-jacents, fondements scientifiques et mode d'exercice clinique. Cet ouvrage, traduit du livre anglais *The Desktop Guide to Complementary and Alternative Medicine* de Edzard Ernst, propose une approche critique de la médecine alternative fondée sur la littérature : organisé de manière pratique sous forme de guide, il prend appui sur des preuves et évalue l'efficacité de 60 médecines alternatives. Objectif, ce livre met en garde le médecin contre les méfaits de certaines pratiques, pose des méthodes de diagnostic et de traitement et propose des synthèses claires sur les bénéfices et risques des médecines alternatives.

Up until now, mountain ecosystems have not been closely studied by social scientists as they do not offer a readily defined set of problems for human exploitation as, do for instance, tropical forests or arctic habitats. But the archaeological evidence had shown that humans have been living in this type of habitat for thousands of years. From this evidence we can also see that mountainous regions are often frontier zones of competing polities and form refuge areas for dissident communities as they often are inherently difficult to control by centralized authorities. As a consequence they fuel or contribute disproportionately to political violence. But we are now witnessing changes and increasing vulnerability of mountain ecosystems caused by human activities. Human adaptability to mountain ecosystems This volume presents an international and interdisciplinary account of the exploitation of—and human adaptation to—mountainous regions over time. The contributions discuss human cultural responses to key physical and cultural stressors associated with mountain ecosystems, such as aridity, quality of soils, steep slopes, low productivity, as well as transient phenomena such as changing weather patterns, deforestation and erosion, and the possible effects of climate change. This volume will be of interest to anthropologists, ecologists and geologists as mountainous landscapes change fast and cultures disappear and they need to be recorded, and mountain regions are of interest for studies on environmental change and cultural responses of mountain populations provide clues for us all. Critical to understanding mountain adaptations is our comprehension of human decision-making and how people view short- and long-term outcomes.

This laboratory manual will be welcomed by all research scientists involved in the extraction, fractionation and isolation of compounds from natural materials, especially those working with plants. The book is clear and concise, and features practical exercises to illustrate the techniques described in every chapter. It will provide an invaluable research reference tool for those scientists investigating the potential benefits of ethnomedicine and the properties of chemicals isolated from natural flora.

Medicines are the core of treatment in biomedicine, as in many other medical traditions. As material things, they have social as well as pharmacological lives, with people and between people. They are tokens of healing and hope, as well as valuable commodities. Each chapter of this book shows drugs in the hands of particular actors: mothers in Manila, villagers in Burkina Faso, women in the Netherlands, consumers in London, market traders in Cameroon, pharmacists in Mexico, injectionists in Uganda, doctors in Sri Lanka, industrialists in India, and policymakers in Geneva. Each example is used to explore a different problem in the study of medicines, such as social efficacy, experiences of control, skepticism and cultural politics, commodification of health, the attraction of technology and the marketing of images and values. The book shows how anthropologists deal with the sociality of medicines, through their ethnography, their theorizing, and their uses of knowledge.

Toxicological Survey of African Medicinal Plants provides a detailed overview of toxicological studies relating to traditionally used medicinal plants in Africa, with special emphasis on the methodologies and tools used for data collection and interpretation. The book considers the physical parameters of these plants and their effect upon various areas of the body and human health, including chapters dedicated to genotoxicity, hepatotoxicity, nephrotoxicity, cardiotoxicity, neurotoxicity, and specific organs and systems. Following this discussion of the effects of medicinal plants is a critical review of the guidelines and methods in use for toxicological research as well as the state of toxicology studies in Africa. With up-to-date research provided by a team of experts, Toxicological Survey of African Medicinal Plants is an invaluable resource for researchers and students involved in pharmacology, toxicology, phytochemistry, medicine, pharmacognosy, and pharmaceutical biology. - Offers a critical review of the methods used in toxicological survey of medicinal plants - Provides up-to-date toxicological data on African medicinal plants and families - Serves as a resource tool for students and scientists in the various areas of toxicology

This reference work provides a wealth of information regarding medicinal plants and phytochemicals. It is addressed both to researchers and teachers. The handbook describes phytochemicals, which, by the strictest definition, are chemicals that are produced by plants. During the last decades, more and more groups became actively involved in exploring plants for useful metabolites that lead to the identification of several useful curative agents and many promising molecules to fight and/or prevent diseases, including carcinogenesis and stroke. But when we talk about phytochemicals, there are also medicinal plants where not a single molecule is responsible for

the observed properties. This reference work therefore reviews and compiles the information on both these aspects. The volumes contain contributions on phytochemicals and herbal extracts. A large number of natural products obtained from plants and microorganisms is used in cosmetic, drug, flavor and fragrance industries. For this compilation, a range of the most important medicinal herbs and phytochemicals were selected and are described by the recognized authors in the field. The present reference work encompasses the information about well established phytochemicals, biology and biotechnology of medicinal plants or their products, their biosynthesis, novel production strategies, demand and uses, metabolism and bioavailability. There is a surge of information published in recent years on herbal medicine and their pharmacologic effects with single books available on varied subjects. However, all this information is widespread and difficult to overview. Researchers who wish to keep a pace with the rapidly developing field of natural products can now consult this newly compiled handbook to find all information about bioactive molecules and medicinal plants thoroughly compiled in one place!

In medicine the understanding and interpretation of the complex reality of illness currently refers either to an organismic approach that focuses on the physical or to a 'holistic' approach that takes into account the patient's human sociocultural involvement. Yet as the papers of this collection show, the suffering human person refers ultimately to his/her existential sphere. Hence, praxis is supplemented by still other perspectives for valuation and interpretation: ethical, spiritual, and religious. Can medicine ignore these considerations or push them to the side as being subjective and arbitrary? Phenomenology/philosophy-of-life recognizes all of the above approaches to be essential facets of the Human Condition (Tymieniecka). This approach holds that all the facets of the Human Condition have equal objectivity and legitimacy. It completes the accepted medical outlook and points the way toward a new 'medical humanism'.

The 2018 FAO-OIE-WHO (Tripartite) zoonoses guide, "Taking A Multisectoral, One Health Approach: A Tripartite Guide to Addressing Zoonotic Diseases in Countries" (2018 TZG) is being jointly developed to provide member countries with practical guidance on OH approaches to build national mechanisms for multisectoral coordination, communication, and collaboration to address zoonotic disease threats at the animal-human-environment interface. The 2018 TZG updates and expands on the guidance in the one previous jointly-developed, zoonoses-specific guidance document: the 2008 Tripartite "Zoonotic Diseases: A Guide to Establishing Collaboration between Animal and Human Health Sectors at the Country Level", developed in WHO South-East Asia Region and Western Pacific Region. The 2018 TZG supports building by countries of the resilience and capacity to address emerging and endemic zoonotic diseases such as avian influenza, rabies, Ebola, and Rift Valley fever, as well as food-borne diseases and antimicrobial resistance, and to minimize their impacts on health, livelihoods, and economies. It additionally supports country efforts to implement WHO International Health Regulations (2005) and OIE international standards, to address gaps identified through external and internal health system evaluations, and to achieve targets of the Sustainable Development Goals. The 2018 TZG provides relevant country ministries and agencies with lessons learned and good practices identified from country-level experiences in taking OH approaches for preparedness, prevention, detection and response to zoonotic disease threats, and provides guidance on multisectoral communication, coordination, and collaboration. It informs on regional and country-level OH activities and relevant unisectoral and multisectoral tools available for countries to use.

[Folk Medicine in Southern Appalachia](#) Springer

In the first comprehensive exploration of the history and practice of folk medicine in the Appalachian region, Anthony Cavender melds folklore, medical anthropology, and Appalachian history and draws extensively on oral histories and archival sources from the nineteenth century to the present. He provides a complete tour of ailments and folk treatments organized by body systems, as well as information on medicinal plants, patent medicines, and magico-religious beliefs and practices. He investigates folk healers and their methods, profiling three living practitioners: an herbalist, a faith healer, and a Native American healer. The book also includes an appendix of botanicals and a glossary of folk medical terms. Demonstrating the ongoing interplay between mainstream scientific medicine and folk medicine, Cavender challenges the conventional view of southern Appalachia as an exceptional region isolated from outside contact. His thorough and accessible study reveals how Appalachian folk medicine encompasses such diverse and important influences as European and Native American culture and America's changing medical and health-care environment. In doing so, he offers a compelling representation of the cultural history of the region as seen through its health practices.
