[Our Moon Has Blood Clots](#) Springer Science & Business Media
 The epoch-making work of János Bolyai is presented here, together with a supplement outlining Hungarian political and science history to help the reader to get acquainted with the miserable fate of János Bolyai and with his intellectual world. A facsimile of a copy of Bolyai's original 1831 *Scientia Spatii* (also known as the Appendix) is included, together with a translation. Comments and notes, and a survey of the effects of his work, complete the volume.

The Record Interpreter Cambridge University Press

The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the "2030 Agenda for Sustainable Development". On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. The Encyclopedia encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 3, namely "Ensure healthy lives and promote well-being for all at all ages" and contains the description of a range of terms, to grow a better understanding and foster knowledge. Ensuring healthy lives and promoting the well-being for all at all ages is essential to sustainable development. Significant strides have been made in increasing life expectancy and reducing some of the common killers associated with child and maternal mortality. Major progress has been made on increasing access to clean water and sanitation, reducing malaria, tuberculosis, polio and the spread of HIV/AIDS. However, many more efforts are needed to fully eradicate a wide range of diseases and address many different persistent and emerging health issues. Concretely, the defined targets are: Reduce the global maternal mortality ratio to less than 70 per 100,000 live births End preventable deaths of newborns and children under 5 years of age, with all countries aiming to reduce neonatal mortality to at least as low as 12 per 1,000 live births and under-5 mortality to at least as low as 25 per 1,000 live births End the epidemics of AIDS, tuberculosis, malaria and neglected tropical diseases and combat hepatitis, water-borne diseases and other communicable diseases Reduce by one third premature mortality from non-communicable diseases

through prevention and treatment and promote mental health and wellbeing Strengthen the prevention and treatment of substance abuse, including narcotic drug abuse and harmful use of alcohol Halve the number of global deaths and injuries from road traffic accidents Ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all Substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination Strengthen the implementation of the World Health Organization Framework Convention on Tobacco Control in all countries, as appropriate Support the research and development of vaccines and medicines for the communicable and non-communicable diseases that primarily affect developing countries, provide access to affordable essential medicines and vaccines, in accordance with the Doha Declaration on the TRIPS Agreement and Public Health, which affirms the right of developing countries to use to the full the provisions in the Agreement on Trade-Related Aspects of Intellectual Property Rights regarding flexibilities to protect public health, and, in particular, provide access to medicines for all Substantially increase health financing and the recruitment, development, training and retention of the health workforce in developing countries, especially in least developed countries and small island developing states Strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks Editorial Board Mohamed Walid Abdullah Meherun Ahmed Monica de Andrade Masoud Mozafari Giorgi Pkhakadze Tony Wall Catherine Zeman/div/div

This 2002 book is a guide to Italian usage for students who have already acquired the basics of the language and wish to extend their knowledge. Unlike conventional grammars, it gives special attention to those areas of vocabulary and grammar which cause most difficulty to English-speakers. Careful consideration is given throughout to questions of style, register, and politeness which are essential to achieving an appropriate level of formality or informality in writing and speech. It surveys the contemporary linguistic scene in Italy and gives ample space to the new varieties of Italian that are emerging in modern Italy. The influence of the dialects in shaping the development of Italian is also acknowledged. Clear, readable and easy to consult via its two indexes, this is an essential reference for learners seeking access to the finer nuances of the Italian language.

Pathobiology of Human Disease bridges traditional morphologic and clinical pathology, molecular pathology, and the underlying basic science fields of cell biology, genetics, and molecular biology, which have opened up a new era of research in pathology and underlie the molecular basis of human disease. The work spans more than 48 different biological and medical fields, in five basic sections: Human - Organ Systems - Molecular Pathology/Basic Mechanisms of Diseases - Animal Models/Other Model Systems - Experimental Pathology - Clinical Pathology Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers from research professionals to advanced undergraduate students. - Reviews quantitative advances in the imaging and molecular analysis of human tissue, new microarray technologies for analysis of genetic and chromosomal alterations in normal and diseased cells and tissues, and new transgenic models of human disease using conditional, tissue-specific gene targeting - Articles link through to relevant virtual microscopy slides, illustrating side-by-side presentation of "Normal" and "Disease" anatomy and histology images - Fully-annotated with many supplementary full color images, graphs, tables, and video files linked to data sets and to live references, enabling researchers to delve deeper and visualize solutions

Event Studies is the only book devoted to developing knowledge and theory about planned events. It focuses on event planning and management, outcomes, the experience of events and the meanings attached to them, the dynamic processes shaping events and why people attend them. This title draws from a large number of foundation disciplines and closely related professional fields, to foster interdisciplinary theory focused on planned events. It brings together important discourses on events including event management, event tourism, and the study of events within various disciplines that are able to shed light on the roles, importance and impacts of events in society and culture. New to this edition: New sections on social and intangible influences, consumer psychology and legal environment, planning

and policy framework to reflect recent developments in the field. Extended coverage of philosophy and research methods and how they can best be used in event studies; social media as a marketing tool; and the class and cultural influences of events. New and additional case studies throughout the book from a wide range of international events. Companion website to include PowerPoint slides and updated Instructor's Manual including suggested lecture outlines and sequence, quizzes per chapter and essay questions.

Oceanic [mythology] Springer

The sinister roots of the strike, they would discover, are several decades deep and can be traced to one man - Masood Azhar - and the empire of terror he created in Kashmir.

Promoting Health, Preventing Disease The Lover Boy of Bahawalpur

"Rahul Pandita was fourteen years old when he was forced to leave his home in Srinagar along with his family, who were Kashmiri Pandits: the Hindu minority within a Muslim-majority Kashmir that was by 1990 becoming increasingly agitated with the cries of 'Azaadi' [freedom] from India. The heartbreaking story of Kashmir has so far been told mainly through the prism of the brutality of the Indian security forces, the pro-independence demands of Muslim separatists or India and Pakistan's rivalry. But there is another part of the story that has remained unrecorded and buried. Our Moon Has Blood Clots is the untold chapter in the story of Kashmir, in which hundreds of thousands of Kashmiri Pandits were tortured, killed and forced to leave their homes by Islamist militants, and to spend the rest of their lives in exile in their own country. Rahul Pandita has written a deeply personal, powerful and unforgettable story of history, home and loss."-- Page 4 of cover.

Pathobiology of Human Disease Springer

This book presents the foundations for the future of tourism in a structured and detailed format. The who-is-who of tourism intelligence has collaborated to present a definitive blueprint for tourism reflecting the role of science, market institutions, and governance in its innovation and sustainability. The book adopts a comprehensive approach, exploring recent research and the latest developments in practice to inform the reader about instruments and actions that can shape a successful future for tourism. Broad in scope, the book incorporates the perspectives of leading tourism academics, as well as the views of tourism entrepreneurs, destination managers, government officials, and civil leaders. The book is divided into three parts, the first of which addresses the scientific facets of innovation, analyzing the challenges and opportunities that technology provides for organic and disruptive developments in tourism, which will shape its future. In turn, the second part examines socio-cultural paradigms - with a view to dismantling traditional barriers to innovation. It also explores the role of heritage and the ethics of inclusiveness as drivers for sustainable tourism. The third part investigates new ways and means in governance and policy making for tourism. It introduces advances such as strategic positioning, symbiotic partnerships, and innovative management, and closes by presenting governance frameworks for an inclusive and sustainable future of tourism.

Controversy, Conflict and Compromise Springer Science & Business Media

The flora of the Mediterranean islands includes many rare and localized species unique to the islands. Some of these are particularly threatened with extinction due to various pressures caused by people and their activities in Mediterranean ecosystems. It includes 50 descriptive sheets of species which are especially threatened, based on the IUCN Red List criteria. Each sheet gives a description of the species with illustrations and maps, emphasizing the threats to the species, existing conservation measures and additional measures needed for their conservation. Aimed at the layman, the text is easily accessible to the non-botanist.

A New English-Hindustani Dictionary Springer

"Children of Substance-Abusing Parents: Dynamics and Treatment" is a necessary reference for all mental health professionals and students who need to understand and treat this

population. It offers an invaluable look at treatment options and programmatic interventions across the life span and fills an important gap in the current literature. The contributors include a wide range of experts who provide up-to-date evidence-based clinical and programmatic strategies for working with children of alcohol and other substance-abusing parents of any age and in almost any practice setting. This highly recommended book is a valuable resource for all practitioners and students concerned about this very large, but often hidden group of individuals and families." From the Foreword by Sis Wenger President/CEO National Association for Children of Alcoholics Parental drug abuse and alcoholism have an enormously detrimental impact on children and adolescents. Children whose parents suffer from drug abuse or alcoholism often face multiple physical, mental, and behavioral issues. They are at a greater risk for depression, anxiety, low self esteem, and addiction, and also are known to have poor school attendance, difficulty concentrating, and lower IQ scores. This book offers health care practitioners proactive programs and innovative strategies to use with this vulnerable population. Taking a comprehensive, life course approach, the authors discuss the implications and interventions at the prenatal stage, through childhood, adolescence, young adulthood, and adulthood. With this book, social workers and health care practitioners can help assess and intervene with children of substance abusing parents. Key topics: Dynamics in families with substance abusing parents and treatment implications Issues across the life span of children of substance abusing parents Prevention and early intervention programs for pregnant women who abuse substances Programs for young children, adolescents, college students, and children with incarcerated parents *The Optical Unconscious* Elsevier Science & Technology also occurs. New outbreaks of yellow fever have occurred in Colombia and Trinidad and new outbreaks of rift valley fever have occurred in Egypt. Chapter 6, Arenaviruses: The biochemical and physical properties have now been clarified, and they show a remarkable uniformity in the various viruses constituting the group. The possibility that prenatal infection with LCM may result in hydrocephalus and chorioretinitis has been raised. Serologic surveys have suggested the existence of Lassa virus infection in Guinea, Central African Empire, Mali, Senegal, Cameroon, and Benin, in addition to earlier identification in Nigeria, Liberia, and Sierra Leone. Chapter 7, Coronaviruses: New studies have confirmed the important role of these viruses in common respiratory illnesses of children and adults. The viruses are now known to contain a single positive strand of RNA. About 50% of corona virus infections result in clinical illness. About 5% of common colds are caused by strain DC 43 in winter. Chapter 8, Cytomegalovirus: Sections on pathogenesis of CMV in relation to organ transplantation and mononucleosis, as well as sections on the risk and features of congenital infection and disease, have been expanded. There are encouraging preliminary results with a live CMV vaccine, but the questions of viral persistence and oncogenicity require further evaluation.

Galletti's Telugu Dictionary Springer

The purpose of this book is to provide a contemporary overview of the causes and consequences of prostate cancer from a cellular and genetic perspective. Written by experts in the fields of epidemiology, toxicology, cell biology, genetics, genomics, cell-cell interactions, cell signaling, hormone signaling, and transcriptional regulation, the text covers aspects of prostate cancer from disease initiation to metastasis. Chapters explore in depth the cells of origin for prostate cancer, its genomic subtypes, neural transcription factors in disease progression, epigenetic regulation of chromatin, and many other topics. This book distinguishes itself from other texts on prostate cancer by its focus on cellular and genetic mechanisms, as opposed to clinical diagnosis and management. As a result, this book will be of broad interest to basic and translational scientists with familiarity of these topics, as well as to trainees at earlier stages of their research careers.

Appendix, the Theory of Space Springer Science & Business Media

This book provides a unified approach for developing a fuzzy classifier and explains the advantages and disadvantages of

different classifiers through extensive performance evaluation of real data sets. It thus offers new learning paradigms for analyzing neural networks and fuzzy systems, while training fuzzy classifiers. Function approximation is also treated and function approximators are compared.

Pattern Classification Univ of California Press

Abstract: Specific and quantifiable objectives are established and delineated for each of 15 priority areas identified in the 1979 Surgeon General's report for the use of private and public sector organizations. The objectives were developed from an effort involving more than 500 individuals and organizations from both the private and governmental sectors, and from initial drafts by 167 invited experts at the 1979 Atlanta conference. Among the 15 topics covered are: pregnancy and infant health; immunization; toxic agent control; nutrition; and control of stress and violent behavior. Policy makers will be able to use the established objectives to track the Nation's successes or failures in disease prevention in the years to come. (wz).

Gazzetta degli ospitali ufficiale per la pubblicazione degli atti del Consiglio degli Istituti ospitalieri di Milano MIT Press

An integrated overview of cancer drug discovery and development from the bench to the clinic, showing with broad strokes and representative examples the drug development process as a network of linked components leading from the discovered target to the ultimate therapeutic product. Following a systems biology approach, the authors explain genomic databases and how to discover oncological targets from them, how then to advance from the gene and transcript to the level of protein biochemistry, how next to move from the chemical realm to that of the living cell and, ultimately, pursue animal modeling and clinical development. Emerging cancer therapeutics including Rituxan, Erbitux, Gleevec, Herceptin, Avastin, ABX-EGF, Velcade, Kepivance, Iressa, Tarceva, and Zevalin are addressed. Highlights include cancer genomics, pharmacogenomics, transcriptomics, gene expression analysis, proteomic and enzymatic cancer profiling technologies, and cellular and animal approaches to cancer target validation.

The Illio Juggernaut Publications India

Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants and newborns. In the early chapters, developmental issues concerning the respiratory system are considered, physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail, and many other topics of interest to the bedside clinician are covered, including the ethics of withdrawal of respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists.

Writing Assessment Handbook Elsevier

This book provides a detailed overview of the latest innovations in respiratory endoscopy, from both diagnostic and therapeutic perspectives; each chapter focuses on one disease and the techniques for early diagnosis as well as treatment. It comprehensively covers treatment and procedures, including simultaneous X-ray fluoroscopy and its use during bronchoscopic procedures. This fast-developing technology is essential for the medical management of non-malignant and malignant diseases of the chest, especially lung cancer. Respiratory Endoscopy describes the cooperation between all the members of the healthcare team, and as such is a valuable resource not only for medical staff, but also for radiological technicians and nursing staff who contribute significantly in the care of the patients undergoing these invasive procedures. By promoting teamwork and providing practical know-how, it will improve the success and safety of respiratory endoscopy procedures.
