The maturity of cd-rom technology now shows a dramatic change in the way librarians and teachers do their jobs. Among their biggest challenges are

deciding on equipment requirements and managing the disk collection. This manual is an understandable step-by-step guide to making the most of cd-rom technology in schools and libraries--from the acquisition of workstations to purchasing and installing disks. Part 1 gives the nuts and bolts on designing your cd-rom system and developing acquisition strategies. Such topics as hardware requirements, furniture, financial planning, selection criteria, compatibility between systems, copyright issues, and licensing are covered here. Part 2 is a practical guide to managing the cd-rom system, including details on installation of the titles, maintaining hardware and software, and troubleshooting the system. Technical information is provided in Part 3, with information on such matters as configuring the workstations and installing cd-rom titles when the vendor-supplied program fails, and solving common problems associated with dos, Windows, and Macintosh systems.

**Cyndi's List** Routledge

This book is concerned with bilingual thematic dictionaries (BTDs). The three chief aims of the research project are: 1) to identify the characteristic features of the bilingual thematic dictionary, 2) to gauge its usefulness, and 3) to make suggestions as to how it could be improved. Various approaches are adopted in order to reveal the nature of the BTD. The typological approach considers the lexicographic genres (bilingual, thematic, and pedagogical) which have been combined to create this hybrid reference work. Particular attention is paid to the BTD's immediate forerunner and closest lexicographic relative: the monolingual thematic learner's dictionary. Detailed textual analyses of contemporary thematic dictionaries identify the characteristic features of the macrostructure, microstructure, and other components from a structural perspective. In order to evaluate the usefulness of the BTD features identified, the textual analyses are supplemented by three pieces of user research involving a questionnaire (to elicit learners' opinions), a test (on the effectiveness of the access structure), and an experiment (to discover how a learner uses a BTD).
