This volume comprises the compounds of thorium with the 4th main group elements silicon and germanium and all 5th main group elements except nitrogen. On the subject of ternary and polynary compounds containing oxygen, only those compounds with phosphorus are included (e.g., phosphates, hypophosphates, or phosphinates). Similar compounds of the other elements like silicates, arsenates, etc. were already treated in "Thorium" Suppl. Vol. C 2, 1976. Most of the compounds in the different systems treated in this volume are of scientific interest because of their special physical and chemical properties. On the other hand, there are also many compounds which are of specific technological interest, mainly in the nuclear field. Refractory compounds like ThSi or ThP have potential interest as nuclear fuel for special reactors due to their physical properties like good heat conductivity and their chemical stability, e.g., against the corrosion of cladding alloys for nuclear fuel elements. Due to the present situation in the further development of the thorium nuclear fuel cycle, their large potential has not yet been fully investigated. For most of the binary and ternary phases in these systems, we presently have good knowledge about the preparation of the compounds and their physical and chemical properties. But nevertheless, there are still a lot of open questions concerning phase equilibria, solid solutions, and homogeneity of some of the phases described in this volume.

Acute Pain brings coverage of this diverse area together in a single comprehensive clinical reference, from the basic mechanisms underlying the development of acute pain, to the various treatments that can be applied to control it in different clinical settings. Much expanded in this second edition, the volume reflects the huge advances that continue to be made in acute pain management. Part One examines the basic aspects of acute pain and its management, including applied physiology and development neurobiology, the drugs commonly used in therapy, assessment, measurement and history-taking, post-operative pain management and its relationship to outcome, and preventive analgesia. Part Two reviews the techniques used for the management of acute pain. Methods of drug delivery and non-pharmacological treatments including psychological therapies in adults and children and transcutaneous electrical nerve stimulation are considered here. Part Three looks at the many clinical situations in which acute pain can arise, and the methods of treatment that may be suitable in each circumstance, whether the patient is young or old, has pain due to surgery, trauma, medical illness or childbirth, or is undergoing rehabilitation. Issues specific to the management of acute pain in the developing world are also covered here.

Research in Nursing, Midwifery and Allied Health provides students with the theory to understanding research frameworks in nursing and allied health. Using practical examples, this text applies the theory to practice in a number of updated cases that reflect students across the nursing, midwifery and allied health areas. The research framework introduced in the book has three different intersecting purposes: (i) to show students how to critically appraise existing research (ii) to show students how the results of research can be used in clinical practice to inform patient care (iii) to

conduct their own research. The sixth edition includes more content than ever before linking research to evidence-based practice, helpfully sign posted throughout the text in new evidence-based practice boxes. Research in Nursing, Midwifery and Allied Health supports instructors as they guide new nursing researchers through the entire research process in a practical and easy to read step-by-step guide. The new four-colour design will be a welcome addition to Cengage's suite of Nursing texts, as well as new CourseMate Express website and Search Me! Nursing, giving students unique access to current journals and news articles specific to nursing and health research.
