Essentials for Nursing Practice - E-Book Oxford University Press

(a) Design and construction. (1) Each facility or part of a facility constructed by, on behalf of, or for the use of a public entity shall be designed and constructed in such manner that the facility or part of the facility is readily accessible to and usable by individuals with disabilities, if the construction was commenced after January 26, 1992. (2) Exception for structural impracticability. (i) Full compliance with the requirements of this section is not required where a public entity can demonstrate that it is structurally impracticable to meet the requirements. Full compliance will be

considered structurally impracticable only in those rare circumstances when the unique characteristics of terrain prevent the incorporation of accessibility features. (ii) If full compliance with this section would be structurally impracticable, compliance with this section is required to the extent that it is not structurally impracticable. In that case, any portion of the facility that can be made accessible shall be made accessible to the extent that it is not structurally impracticable. (iii) If providing accessibility in conformance with this section to individuals with certain disabilities (e.g., those who use wheelchairs) would be structurally impracticable, accessibility shall nonetheless be ensured to persons with other types of disabilities, (e.g., those

who use crutches or who have sight, hearing, or mental impairments) in accordance with this section.

The Age of Em John Wiley & Sons
Now in its second edition, *Text Analysis with R* provides a practical introduction to computational text analysis using the open source programming language R. R is an extremely popular programming language, used throughout the sciences; due to its accessibility, R is now used increasingly in other research areas. In

this volume, readers immediately begin working with text, and each chapter examines a new technique or process, allowing readers to obtain a broad exposure to core R procedures and a fundamental understanding of the possibilities of computational text analysis at both the micro and the macro scale. Each chapter builds on its predecessor as readers move from small scale “microanalysis” of single texts to large scale “macroanalysis” of text corpora, and each concludes with a set of practice exercises that reinforce and expand upon the chapter lessons. The book’s focus is on making the technical palatable and making the technical useful and immediately gratifying. *Text Analysis with R* is written with students and scholars of literature in mind but will

be applicable to other humanists and social scientists wishing to extend their methodological toolkit to include quantitative and computational approaches to the study of text. Computation provides access to information in text that readers simply cannot gather using traditional qualitative methods of close reading and human synthesis. This new edition features two new chapters: one that introduces `dplyr` and `tidyr` in the context of parsing and analyzing dramatic texts to extract speaker and receiver data, and one on sentiment analysis using the `syuzhet` package. It is also filled with updated material in every chapter to integrate new developments in the field, current practices in R style, and the use of more efficient algorithms.

Critical Thinking A&C Black Learn Psychology offers a comprehensive yet accessible presentation of psychology principles, research and theory. Each chapter is carefully structured to cover the topics and concepts of a standard introductory psychology course with associated learning objectives and assessments. Multiple influences are discussed at the end of each chapter wrapping up the chapter presentation. With Learn Psychology, students will find an engaging writing style supported by a pedagogical approach that invites critical analysis, all while building a deeper knowledge of psychology. Thinking Skills Taylor & Francis

The Ways We Think critiques predominant approaches to the development of thinking in education and seeks to offer a new account of thought informed by phenomenology, post-structuralism and the 'ordinary language' philosophical traditions. Presents an original account of thinking for education and explores how this alternative conception of thought might be translated into the classroom. Explores connections between phenomenology, post-structuralism and

ordinary language philosophical traditions Examines the relevance of language in accounts of how we think Investigates the philosophical accounts of Gilbert Ryle, Martin Heidegger, John Austin and Jacques Derrida Draws upon experience of own teaching practice as philosopher-in-residence

Mosby's Fundamentals of Therapeutic Massage - E-Book Rowman & Littlefield

Across the world education for 'thinking' is seen as the key to thriving in an increasingly complex, globalised, technological world. The OECD suggests that teaching thinking is key to growing a more successful economy; others claim it is needed for increased democratic engagement and well-being. Theory of Teaching Thinking discusses what is meant by 'thinking' in the

context of teaching and takes a global perspective incorporating contributions from neurocognitive, technological, Confucian, philosophical, and dialogical viewpoints. Questions explored throughout this edited volume include: what is thinking? how can thinking be taught? what does 'better thinking' mean, and how can we know it if we see it? what is the impact on wider society when thinking is taught in the classroom? Extensively researched and at the cutting edge of this field, this book provides the context for teaching thinking that researchers, teachers, and policy-makers need. As the first book in a brand new series, Research on Teaching Thinking and Creativity, it is a much-needed introduction and guide to this critical subject.

The past decade has seen a profound shift in our collective understanding of the digital network. What was once understood to be a transcendent virtual reality is now experienced as a ubiquitous grid of data that we move through and interact with every day, raising new questions about the social, locative, embodied, and object-oriented nature of our experience in the networked world. In *The Emergence of the Digital Humanities*, Steven E. Jones examines this shift in our relationship to digital technology and the ways that it has affected humanities scholarship and the academy more broadly. Based on the premise that the network is now everywhere rather than merely "out

there," Jones links together seemingly disparate cultural events—the essential features of popular social media, the rise of motion-control gaming and mobile platforms, the controversy over the "gamification" of everyday life, the spatial turn, fabrication and 3D printing, and electronic publishing—and argues that cultural responses to changes in technology provide an essential context for understanding the emergence of the digital humanities as a new field of study in this millennium. Robots may one day rule the world, but what is a robot-ruled Earth like? Many think that the first truly smart robots will be brain emulations or "ems." Robin Hanson draws on decades of expertise in economics, physics, and computer science to paint a detailed picture of this next great era in human (and machine) evolution - the age of em.

Rape Culture and Religious Studies: Critical and Pedagogical Engagements stages a critical engagement between religious texts and the problem of sexual violence. Rape and other forms of sexual violence are widespread on college and university campuses; they also occur in sacred texts and religious traditions. The volume addresses these difficult intersections as they play out in texts, traditions, and university contexts. The volume gathers contributions from religious studies scholars to engage these questions from a variety of institutional contexts and to offer a constructive assessment of religious texts and traditions.

A Primer for Teaching Digital History is a guide for college and high school teachers who are teaching digital history for the first time or for experienced teachers who want to reinvigorate their pedagogy. It can also serve those who are training future teachers to prepare their own syllabi, as well as teachers who want to incorporate digital history into their history courses. Offering design principles for approaching digital history that represent the possibilities that digital research and scholarship can take, Jennifer Guiliano outlines potential strategies and methods for building syllabi and curricula. Taking readers through the process of selecting data, identifying learning outcomes, and determining which tools students will

use in the classroom, Guiliano outlines popular research methods including digital source criticism, text analysis, and visualization. She also discusses digital archives, exhibits, and collections as well as audiovisual and mixed-media narratives such as short documentaries, podcasts, and multimodal storytelling. Throughout, Guiliano illuminates how digital history can enhance understandings of not just what histories are told but how they are told and who has access to them.

In the mid-nineteenth century, the study of English literature began to be divided into courses that surveyed discrete "periods." Since that time, scholars' definitions of literature and their rationales for teaching it have changed

radically. But the periodized structure of the curriculum has remained oddly unshaken, as if the exercise of contrasting one literary period with another has an importance that transcends the content of any individual course. Why Literary Periods Mattered explains how historical contrast became central to literary study, and why it remained institutionally central in spite of critical controversy about literature itself. Organizing literary history around contrast rather than causal continuity helped literature departments separate themselves from departments of history. But critics' long reliance on a rhetoric of contrasted movements and fateful turns has produced important blind spots in the discipline. In the twenty-first century, Underwood argues, literary study may

need digital technology in particular to develop new methods of reasoning about gradual, continuous change.
