Corporations and Sustainability: The South Asian Perspective is a collection of contributions from leading academics and practitioners which provides an overview of the key challenges and opportunities related to sustainability in South Asia. The last two decades have

seen rapid and often dramatic changes in the institutional, economic and ecological contexts in which firms operating in South Asian economies find themselves. South Asia is increasingly seen both as a driver of global economic growth as well as a barrier to sustainable development. The most significant driver of change in the region has been the economic liberalization attempts of national governments, resulting in easier and faster flows of information, labour and capital between these economies and the rest of the world. Consequently, global environmental and social concerns are increasingly driving governmental and corporate decision-making processes for firms operating in South Asia. In responding to these emerging challenges, firms have begun to re-evaluate and redesign their strategies, structures and processes as well as incorporate sustainability principles into their strategies. Corporations and Sustainability: The South Asian Perspective thus delivers an important perspective for researchers as well as students of master's-level courses on business and environment. It is particularly useful for those trying to understand the key sustainability challenges in the South Asian context as well some of the solutions emerging in the critical areas of heavy industry and also service sectors.

Processing of Biomass Waste: Technological Upgradation and Advancement focuses on the exploitation of various waste

management technologies and their associated process (microbial/chemical/physical) as tools to simultaneously generate value during treatment processes, including degradation/detoxification/stabilization toxic and hazardous contaminants. The book explores wastes as a veritable resource for wealth creation, with particular focus on resources recoverable from diverse wastes using special intervention of biotechnological tools. Other sections highlight recent technologies of waste bioprocessing in biorefinery approaches and enlighten on different approaches. The book encompasses advanced and updated information as well as future directions for young researchers and scientists who are working in the field of waste management, with a focus on sustainable value generation. - Includes cutting-edge technologies in waste bioprocessing - Focuses on applications of molecular biotechnological tools in waste bioprocessing - Provides natural and eco-friendly solutions to deal with the problem of pollution aiming value generation - Details underlying mechanisms of waste bioprocessing approaches that cover microbes for the simultaneous value generation and removal of emerging contaminants - Includes field studies on the application of biorefinery approach for eco-restoration of contaminated sites - Presents recent advances and challenges in waste bioprocessing research and applications for sustainable development

Major Companies of Europe Grove's Dictionaries

Although clusters are regarded as important elements in economic development, the strong focus in the literature on the way clusters function is

contrasted with a disregard for their evolutionary development: how clusters actually become clusters, how and why they decline, and how they shift into new fields and transform over time. Although recently new cluster life cycle approaches emerged, both empirical evidence and theoretical contributions on this topic are still limited. This book therefore contributes to broadening our knowledge on the life cycle and evolution of clusters both empirically and theoretically. It contains chapters on inter-firm relations as drivers of cluster transformation, as well as chapters on the heterogeneity of firms and firm capabilities during cluster evolution and on the role of institutions in stimulating the emergence and growth of clusters. Case-studies stem from different industries and technologies, such as biogas, film and television, new media and medical technologies, and from different countries, such as Sweden, Austria, Switzerland and South Korea. All chapters underline that cluster evolution does not only depend on internal dynamics, but that external relations are an integral part of cluster dynamics. This book was previously published as a special issue of European Planning Studies.

Examining the current status, potential and trends in renewable energy sources, this book focuses on the technology, costs, industry characteristics and market development issues associated with each form of renewable energy.

Economic Report Academic Press

The Circular Economy: Case Studies about the Transition from the Linear Economy explores examples of the circular economy in action. Unlike other books that provide narrow perceptions of wide-ranging and highly interconnected paradigms, such as supply chains, recycling, businesses models and waste management, this book provides a comprehensive overview of the circular economy from various perspectives. Its unique insights into the approaches, methods and tools that enable people to make the transformation to a circular

economy show how recent research, trends and attitudes have moved beyond the "call to arms" approach to a level of maturity that requires sound scientific thinking.

Papua New Guinea Oil and Gas Sector, Energy Policy, Laws and Regulations Handbook Volume 1 Principal Laws, Regulations and Policies Routledge

This book represents the seventh edition of what has become an established reference work, MAJOR COMPANIES OF THE FAR EAST & AUSTRALASIA. This volume has been carefully researched and updated since publication of the sixth edition, and provides more company data on the most important companies in the region. The information in the book was submitted mostly by the companies themselves, completely free of charge. For the first time, a third volume has been added to the series, covering major companies in Australia and New Zealand. The companies listed have been selected on the grounds of the size of their sales volume or balance sheet or their importance to the business environment of the country in which they are based. The book will be updated and published every year. Any company that considers it is eligible for inclusion in the next edition of MAJOR COMPANIES OF THE FAR EAST & AUSTRALASIA, should write to the publishers. No charge whatsoever is made for publishing details about a principal Asian company. Whilst the publishers have taken every care to ensure accurate reporting of the company information contained in this book, no liability can be accepted by either the publishers, their editorial staff, or their distributors for any errors or omissions, nor for the consequences thereof. . . Graham & Trotman Ltd is a member of the Kluwer Academic

Publishers Group and publishes over 450 business and technology books. A catalogue is available on request.

OECD Food and Agricultural Reviews Innovation, Agricultural Productivity and Sustainability in the Netherlands Springer

The 1st World Conference and Technology Exhibition on Biomass for Energy and Industry, held in Sevilla in June 2000, brought together for the first time the traditional European Conference on Biomass for Energy and Industry and the Biomass Conference of the Americas, thus creating the largest and most outstanding event in the worldwide biomass sector. The conference elaborated innovative global strategies, projects and efficient practice rules for energy and the environment at a key stage in the industry's development. New concepts and projects were highlighted to increase the social and political awareness for a change in worldwide resource consumption and to promote economically, socially and environmentally sustainable development for the next millennium. In 2 volumes, the Proceedings include some 470 papers essential to an understanding of current thinking, practice, research and global developments in the biomass sector - a vital reference source for researchers, manufacturers, and policy makers involved or interested in the use of biomass for energy and industry.

The Governance of Climate Relations Between Europe and Asia Springer

Cluster organizations are becoming more and more popular, both in developing and developed countries. Considering the development of cluster policy and

the related dynamic growth of cluster initiatives in the world, the lack of sufficient knowledge on the development of cooperation in cluster organizations inhibits their development and, in many cases, causes their complete disintegration. The book provides new important elements to the current system of knowledge, filling in cognitive and research gaps in the scientific literature on problems related to cooperation in cluster organizations. The most valuable features for the reader concern the epistemological, methodological, and application aspects. The new element includes a theoretical concept, which refers to the trajectory of development of cooperative relationships in cluster organizations that facilitates the understanding and explanation of mechanisms responsible for cooperation in such organizations. The concept also has great practical advantages, especially for people implementing the idea of "clustering": coordinators, facilitators, and members of cluster organizations as well as politicians and public authorities are responsible for shaping and implementing the cluster policy. It will be of value to researchers, academics, and students in fields with an interest in organizational studies, management of innovation and technology, strategic management, industrial economics, and economic geography.

Processing of Biomass Waste

National Academies Press
Substitute Natural Gas from Waste: Technical Assessment and Industrial Applications of Biochemical and Thermochemical Processes provides an overview of the science and technology of anaerobic digestion and thermal gasification for the treatment of biomass and unrecyclable waste residues. The

book provides both the theoretical and practical basis for the clean and high-efficiency utilization of waste and biomass to produce Bio-Substitute Natural Gas (SNG). It examines different routes to produce bio-SNG from waste feedstocks, detailing solutions to unique problems, such as scale up issues and process integration. Final sections review waste sourcing and processing. This book is an ideal and practical reference for those developing, designing, scaling and managing bio-SNG production and utilization systems. Engineering students will find this to be a comprehensive resource on the application of fundamental concepts of bio-SNG production that are illustrated through innovative, recent case studies.

- Presents detailed scientific and technical information
- Describes up-to-date concepts, processes and plants for efficient anaerobic digestion and gasification of wastes and syngas utilization
- Compares gasification with anaerobic digestion for different situations
- Proposes alternative strategies to increase efficiency and overcome energy balance limitations
- Includes benchmarking data and industrial real-life examples to demonstrate the main process features and implementation pathways of bio-SNG systems from dry and wet waste, both in developed and developing countries

Major Companies of the Far East and Australasia Elsevier

This textbook covers the entire gamut of project scoping, identification, development and appraisal and is primarily designed to meet the requirements of postgraduate students of management and engineering education. Researchers, consultants, policy makers and professionals in

project management will find it a good body of knowledge as a reference source. The objective of the book is to provide a multidisciplinary grounding to the readers so that they can develop all the skills and competencies required to view or manage the entire project management process as an integrated whole. The book has been written in an easy-to-understand style and uses live case studies of renewable energy projects to illustrate the concepts, so that the students/readers understand them in the context of the real world. Though based on renewable energy projects, majority of the concepts explained in the book are applicable to other industrial projects equally – detailed guidance and notes on this aspect is given appropriately in the book.

India Investment and Business Guide Springer

An NRC ad hoc committee analyzed the current status and future development potential of Armenia's science and technology base, including human and infrastructural resources and research and educational capabilities. The committee identified those fields and institutions offering promising opportunities for contributing to economic and social development, and particularly institutions having unique and important capabilities, worthy of support from international financial institutions, private investment sources, and the Armenian and U.S. governments. The scope of the study included both pure and applied research as well as education in science-related fields. The committee's report addresses the existing capacity of state and private research institutions, higher education capabilities and trends, scientific funding sources, innovative investment models,

relevant success stories, factors hindering development of the science sector, potential domestic Armenian customers for scientific results and products, and opportunities for regional scientific collaboration. An Armenian language version of the report is also available.

Energy Abstracts for Policy Analysis Springer Science & Business Media

“This book is very timely. . . it provides important insights for bilateral cooperation and international negotiations. These lessons go beyond EUÐChina and EUÐVietnam relations. Many of them are applicable to other countries in Asia, a region which will remain a key priority for EU foreign and climate policy, not least as the EU’s largest trading partner.” Ð From the foreword by Jos Delbeke, Director General, EC DG Climate Action The Governance of Climate Relations between Europe and Asia offers a

thorough empirical study of the most fundamental dynamics involved in EU climate relations with China and Vietnam in the context of global climate governance. This book presents a study of the most important governance processes in current EUÐAsia climate relations. It focuses on in-depth empirical case studies, offering a comprehensive relational perspective. Contributions on China cover the most essential issues, interests and actors, while the inquiry of EUÐVietnam relations mainly focuses on the Clean Development Mechanism as the main channel of bilateral climate action. This landmark study will appeal to both policymakers and practitioners faced with the extraordinary task of managing the increasingly complex and multilevel interactions of current EUÐAsia climate relations as well as global carbon market watchers and professionals dealing with emissions trading in the European Union, China and Vietnam. It will also be of interest to scholars and postgraduate students of international relations, Chinese and EU foreign policy, global environmental and climate governance and international law.
