Lire les image de cinéma fournit des outils

indispensables pour décrypter le cinéma à l'échelle du plan (point de vue, distance focale, profondeur de champ...), de la séquence (scénographie, montage, suspense...) et du film (ressorts de l'histoire, genres, personnages...). Les figures répertoriées sont illustrées par un

choix de photogrammes issus de films très variés. La mécanique de la narration filmique et les détails de la scénographie sont ensuite décortiqués à travers 23 analyses de séquences, qui sont autant d'exemples d'une lecture " fine " du cinéma. Les films ont été sélectionnés de

manière à représenter à égalité des succès populaires (Dr Jerry et Mr Love, Titanic ou Kill Bill) et des classiques du septième art (Octobre, Sunset Boulevard, le Septième Sceau, Vertigo). " Ce livre n'est pas un répertoire de règles grammaticales hors desquelles on resterait devant le film comme devant un texte en langue étrangère. Il ne porte pas davantage sur des films complexes, ardu ou prétendument illisibles sans mode d'emploi. Lire les images de cinéma, c'est prolonger le plaisir du spectacle en analysant, en décortiquant, en regardant à la loupe ce qui a passé à toute vitesse - à 24 ou à 25 images par seconde. "

Webster's New French Dictionary (Custom) Franklin Classics

This collection of articles (the Vercelli conference proceedings) places the theme of scepticism within its philosophical tradition. It explores the English philosophical thinkers, the French context, as well as major Italian figures and Spanish culture. It pays special attention to the relationships between history of philosophical ideas and the problems rising from the history of sciences (medicine, physics, linguistics, historical

scholarship) in the 17th and the 18th centuries.

Les Annales politiques et littéraires Legare Street Press

Current mainstream opinion in psychology,

neuroscience, and philosophy of mind holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains. Views of this sort have dominated recent scholarly publication. The present volume, however, demonstrates empirically that this reductive materialism is not only incomplete but false. The authors systematically marshal evidence for a variety of psychological phenomena that are extremely difficult, and in some cases clearly impossible, to account for in conventional physicalist terms. Topics addressed include phenomena of extreme psychophysical influence, memory, psychological automatisms and secondary personality, near-death experiences and allied phenomena, genius-level creativity, and 'mystical' states of consciousness both spontaneous and drug-induced. The authors further show that these rogue phenomena are more readily accommodated by an alternative 'transmission' or 'filter' theory of mind/brain relations advanced over a century ago by a largely forgotten genius, F. W. H. Myers, and developed further by his friend and colleague William James.

This theory, moreover, ratifies the commonsense conception of human beings as causally effective conscious agents, and is fully compatible with leading-edge physics and neuroscience. The book should command the attention of all open-minded persons concerned with the still-unsolved mysteries of the mind.
