 Die Alternative zur Massentierhaltung ist das eigene Huhn im Garten. Wer "glückliche Hühner" züchten und sogar in dichter verbauten Gebieten rassegerecht halten möchte, findet in diesem Praxisbuch mit seinen leicht umsetzbaren Anleitungen und wunderschönen Bildern den besten Ratgeber. Das umfangreiche Werk beschäftigt sich mit allen Fragen der Hühnerhaltung: Vom richtigen Stall und seiner optimalen Ausstattung über die Anschaffung von Hühnern, ihre Ansprüche und Fütterung bis hin zur Brut und Aufzucht. Ausführlich werden die verschiedenen Hühnerrassen vorgestellt, wobei alte und gefährdete Rassen im Vordergrund stehen. Ebenso umfassend gehen die Autoren auf die Vorbeugung und Behandlung von Hühnerkrankheiten ein. Nicht nur an den fundierten Texten, auch in den wunderschönen Fotografien spiegelt sich die Liebe der Autoren zu diesen Tieren, was so jeden an Hühnern interessierten Leser erfreuen!
Bibliographie der Deutschen Bibliothek Leopold Stocker Verlag
 Aldrovandi on Chickens, written in 1598, is the first English translation of any work by the Italian naturalist Ulisse Aldrovandi. It exemplifies the spirit and the letter of Renaissance science--the former, in the extensive classical references; the latter, through careful examination of every process involved with the raising or use of chickens. Aldrovandi discusses such concepts as artificial stimulation of egg production, culling, and flock behavior. He traces reproduction in great detail from the competition of sperm in the oviduct to the position of the developed chick. The author directs himself particularly to the chicken's beneficial effects on human life. In addition to recipes, he lists remedies concocted from chickens for many diseases, and the prescriptions provide a fascinating glimpse of the medical practices of the time. The chicken family, Aldrovandi suggests, is an admirable example of unity for the human family--provided the rooster's extraordinary lustfulness is not emulated. As the well-known Italian zoologist Alessandro Ghigi points out in his foreword to this translation,

Aldrovandi on Chickens contributes substantially to the history of science and the study of ornithology. The author's genius and unique style make the book an important representative of one of the golden ages of the intellect.

 The World Problem of Salmonellosis Avian Physiology
 Animal abuse as a predictor of abuse against humans has been documented extensively. Experts have explored alternatives to identify the early signs and stop the cycle. This book offers an up-to-date compendium that covers the historical, legal, research and applied issues related to animal abuse and cruelty.

Methods for the Determination of Vitamins in Food Springer Science & Business Media

The welfare of egg-producing poultry is a topic of great concern to the poultry industry and to researchers in applied animal behaviour. It is also subject to increased legislation. Issues such as battery cages, space requirements, access to daylight and "free-range" eggs have attracted public interest.

In the course of the project COST 91 *, on the Effects of Thermal Processing and Distribution on the Quality and Nutritive Value of Food, it became clear that approved methods were needed for vitamin determination in food. An expert group on vitamins met in March 1981 to set the requirements which these methods must meet. On the basis of these requirements, methods were selected for vitamin A, ~-carotene, vitamin B1 (thiamine), vitamin C and vitamin E. Unfortunately, for vitamins B2 (riboflavin), B6 and D only tentative methods could be chosen, since the methods available only partially fulfilled the requirements set by the expert group. For niacin and folic acid some references only could be given because none of the existing methods satisfied these requirements, and for vitamin B , vitamin K, pantothenic acid and 12 biotin it was not considered possible to give even references. All methods were carefully described in detail so that every laboratory worker could use them without being an expert in vitamin assay. In October 1983 an enlarged expert group on vitamins approved the compilation of methods and approached a publishing house with a view to publication. The editors wish to thank Dr Peter Zeuthen, the leader of the project COST 91, for his interest in their work, and Mr G.
