Training Staff in Behavioural Methods: Trainee workbook Heinemann

What are the parts of a plant cell? Who was Norman Borlaug? What is a centrifuge used for? Read Plant Cells and Life Processes to find out the answers to these questions and more. Each book in the Investigating Cells series explores the fascinating world of the cell. You will also learn about scientists who made an impact in cell research and discover the importance of key science tools, such as the modern microscope, that allowed for more in-depth exploration of the cell. Heinemann Infosearch asks the questions you want answered. Each chapter starts with a different question and gives a detailed answer. Book jacket.

*AS biology for AQA (specification B)* Capstone

For too long, evolution has been denied its place in the science curriculum. School policies driven

by misunderstanding or fear regularly displace widely recognized principles of science. But without understanding evolution, students--no matter what their religious beliefs--will never achieve the level of scientific literacy they need to make sense of even everyday practicalities like how human viruses work. In *The Missing Link*, Lee Meadows has crafted an approach to teaching evolution that helps students understand its explanatory power whether they accept its principles or not. All students are invited to engage in inquiry, where questions, evidence, and exploration supplant values-based debates over right and wrong answers. Teachers will find the tools and resources they need to develop a unit on evolution including: an overview of inquiry-based science teaching outlines for lesson plans a plethora of internet resources. An appendix also provides a refresher course for teachers who may want to sharpen their content knowledge of evolution. And a study guide makes this ideal for book study groups. Bring *The Missing Link* to your teaching and keep the doors to science open for all your students.

*Heinemann Biology 2* Heinemann-Raintree Library
