BRANSON MACIAS

The Science Teacher
Univ of California Press

Much writing on men in the field of gender studies tends to focus unduly, almost exclusively, on portraying men as villains and women as victims in a moral bipolar paradigm. *Rethinking Men* reverses the proclivity which ignores not only the positive contributions of men to society, but also the male victims of life including the homeless, the incarcerated, the victims of homicide, suicide, accidents, war and the draft, and sexism, as well as those affected by the failures of the health, education, political, and justice systems. Proceeding from a radically different perspective in seeking a more positive, balanced, and inclusive view of men (and

women), this book presents three contrasting paradigms of men as heroes, villains, and victims. Revised and updated, and presenting data and studies from the United States, Canada, and the United Kingdom, it offers a comparative and revised perspective on gender that will be of interest to scholars across a range of social sciences.

The universality of musical tones has long fascinated philosophers,

scientists, musicians, and ordinary listeners. Why do human beings worldwide find some tone combinations consonant and others dissonant? Why do we make music using only a small number of scales out of the billions that are possible? Why do differently organized scales elicit different emotions? Why are there so few notes in scales? In *Music as Biology*, Dale Purves argues that biology offers answers to these and other questions on which conventional music theory is silent. When people and animals vocalize, they generate tonal sounds—periodic pressure changes at the ear which, when combined, can be heard as melodies and harmonies. Human

beings have evolved a sense of tonality, Purves explains, because of the behavioral advantages that arise from recognizing and attending to human voices. The result is subjective responses to tone combinations that are best understood in terms of their contribution to biological success over evolutionary and individual history. Purves summarizes evidence that the intervals defining Western and other scales are those with the greatest collective similarity to the human voice; that major and minor scales are heard as happy or sad because they mimic the subdued and excited speech of these emotional states; and that the character

of a culture's speech influences the tonal palette of its traditional music. Rethinking music theory in biological terms offers a new approach to centuries-long debates about the organization and impact of music.

The New York Times bestseller: "You gotta read this. It is the most exciting book about Pluto you will ever read in your life." —Jon Stewart When the Rose Center for Earth and Space at the American Museum of Natural History reclassified Pluto as an icy comet, the New York Times proclaimed on page one, "Pluto Not a Planet? Only in New York." Immediately, the public, professionals, and press were choosing sides over Pluto's planethood.

Pluto is entrenched in our cultural and emotional view of the cosmos, and Neil deGrasse Tyson, award-winning author and director of the Rose Center, is on a quest to discover why. He stood at the heart of the controversy over Pluto's demotion, and consequently Plutophiles have freely

shared their opinions with him, including endless hate mail from third-graders. With his inimitable wit, Tyson delivers a minihistory of planets, describes the oversized characters of the people who study them, and recounts how America's favorite planet was ousted from the cosmic hub.
