This book presents over 100 papers from the 3rd Engineering & Product Design Education International Conference dedicated to the subject of exploring novel approaches in product design education. The theme of the book is "Crossing Design Boundaries" which reflects the editors' wish to incorporate many of the disciplines associated with, and integral to, modern product design and development pursuits. Crossing Design Boundaries covers, for example, the conjunction of anthropology and design, the psychology of design products, the application of soft computing in wearable products, and the utilisation of new media and design and how these can be best exploited within the current product design arena. The book includes discussions concerning product design education and the cross-over into other well established design disciplines such as interaction design, jewellery design, furniture design, and exhibition design which have been somewhat under represented in recent years. The book comprises a number of sections containing papers which cover highly topical and relevant issues including Design Curriculum Development, Interdisciplinarity, Design Collaboration

and Team Working, Philosophies of Design Education, Design Knowledge, New Materials and New Technologies in Design, Design Communication, Industrial Collaborations and Working with Industry, Teaching and Learning Tools, and Design Theory. Spatial reasoning tests are widely used during selection processes which require an ability to use practical and visual skills. They are more common in jobs such as engineering and driving roles but are also more and more being utilised on medical and science roles. Spatial reasoning, or ability as it is sometimes called, involves the candidate visualising and then manipulating different complex shapes and patterns. Competence in spatial awareness is said to be mostly inherited; however, tests have proven that your ability in this type of test can be greatly improved with targeted practice. This book will provide you with over 230 pages of sample spatial reasoning test questions and answers to help you prepare thoroughly for the tests.
