The attitude of sharing global problems and being part of its solution in one's own capacity and competence is, in essence, Social Responsibility today. Businesses are no exceptions, in fact, they are, more than any other time in history, expected to take larger responsibilities of their actions and impacts along their own supply chains and contribute their bit to alleviating some of the worst challenges the planet and its people are facing. The emphasis is on demonstrable differences they make. In India, the revisions done to the

Companies Act, especially pertaining to the CSR done by Indian companies echo this sentiment. While stipulating definitive themes of developmental and social areas where companies can do CSR related work, a great emphasis is laid on concrete plans and tangible results, making CSR in the country a significant tool in national development and a strategy to contribute to global goals. The book, in its writing, has attempted to bring these renewed perspectives to the reader with real-world insights into related company practices.

The pressing need for environmental preservation has never been more evident, placing companies at the forefront of the sustainability movement. As the global community grapples with the ever-escalating environmental crisis, the imperative to preserve our planet has transitioned from an ethical consideration to a business necessity. Companies now face an unprecedented challenge: not only must they adapt to more sustainable practices, but must also

fully embrace them across all aspects of their operations, including at the employee level. At the heart of this transformative journey lies human resource management, a pivotal lever for shaping a sustainable and environmentally responsible future for organizations. *Building Sustainable Human Resources Management Practices for Businesses* is a tool for academic scholars and discerning readers who seek to understand and address this urgent issue. inspires change. In 2003, the United Nations adopted a common rights-based approach to development in their efforts to promote an international standard of human rights throughout the world. The approach emphasizes economic, social, and cultural rights, but plays down the role of civil and political rights in development.

Intergovernmental and non-governmental agencies operate only at the invitation and sufferance of their hosts, and states retain full sovereignty and control over their territory; and the direct promotion of civil and political rights by foreign organizations has seemed beyond the ability of multilateral development agencies. But as Development and Human Rights shows, UN agencies have begun to take on a remarkable set of development priorities that, while carefully circumscribed and defined, constitute greater involvement in a state's internal affairs than anyone would have considered in the past. In

this book, Joel E. Oestreich presents the first full-length study of how international agencies evaluate the rights situation in a single country, and the first study to look at both the good and the bad in a rights-based approach. It looks particularly at the human rights challenges faced in India, considering the work of five UN agencies: UNICEF, the UN Development Programme, the World Bank, the UN Fund for Population Activities, and UN Women. Over the course of the book, Oestreich summarizes how the UN navigates this difficult political terrain, and how effectively these policies are being implemented. Development and Human Rights ultimately considers how rights-based approaches fit in the traditional discourse on human rights, and the ability of these agencies to initiate meaningful change on state behavior in the rights arena. In the book, Lewis D. Solomon develops the theme that the profit motive can serve as a powerful force for social good in developing nations, making a difference in the lives of those trapped in misery

and helping millions out of poverty. After focusing on three US-based venture capital-like firms, the book presents evidence that for-profit corporations, many indigenous, funded in part by these capital providers have alleviated global poverty. These investee firms, which seek both financial and social returns, serve the impoverished by delivering critically needed but affordable goods and services, including quality education, preventive healthcare, light and power, and enhanced agricultural productivity.

This book highlights the reality of malnutrition among school-age children in India and relates it with dietary adequacy, diversity and choice. Using empirical data from field research conducted in Karnataka, India, it documents the nutritional status of school-going children, and examines the socio-economic determinants. It provides insights into changing dietary patterns by analysing case studies from households and schools; and documents

the impact of changing dietary choices on the daily nutritional intake of young children. As the issue of nutrition for school-age children is one that is largely neglected in the literature, the book fills an important gap. The book also investigates the policy framework for addressing the nutritional needs of school-going children, and assesses the available government-sponsored interventions in terms of their efficiency and effectiveness, measured by their impact on the nutritional indices of the target group. It offers concrete recommendations for changing the nutritional intake of school-going children. Navigating through the socio-cultural causes for changing food choice and their impact on children's nutritional outcomes, this book shows a viable path to addressing malnutrition, taking into account both macro-level policy constraints and the micro-level perspectives of families, schools and communities.

The Covid-19 pandemic has revealed the fragility of economic systems, and the precariousness of the incomes and lives of people all over the world. We must “build back better” and create a more resilient economy, which is more inclusive, and more just, than our economies are. What should be the contours of the “new normal”, and how will we change the old normal to the new, are questions we must collectively address now, and urgently. Otherwise, the old will recreate itself, driven by the embedded ideas about good economics on which it was founded. “Never waste a crisis”, leaders and policymakers say. *A Billion Fireflies* is a reminder of the ideas for a new paradigm—of what it should be and how it can be brought about—that far-sighted people had proposed before the pandemic. The time has come to convert those ideals into reality.

In the last decade, addressing the persistent problem of maternal, infant, young child and adolescent malnutrition in India has gained significant attention. With the well-established serious implications of malnutrition on mortality and morbidity; mental health and cognitive

development; activity and productivity and overall economic development, today there is an unprecedented political commitment to improving the grave woman and child nutrition scenario in the country. POSHAN ABHIYAAN (Nutrition Mission) was launched in a Mission mode by the Honourable Prime Minister of India on March 8, 2018, followed by measures for an effective implementation of an integrated nutrition strategy through POSHAN 2.0 in 2022. The book with 15 chapters tracks the history of evolvement of public nutrition policies and strategies, presents an update on the nutrition scenario, analyses the experiences and synthesises emerging lessons in the prevention and control of malnutrition. Additionally, the book includes chapters with details of each of the various government systems such as Health, ICDS, NRLM, PDS, Education/MDM, Water-Sanitation that provide lead in mainstreaming nutrition actions that directly or indirectly impact on accelerating the improvement of the nutrition situation of women, adolescents and

children. The book is intended to be an indispensable reference for teachers and students of nutrition, community medicine, public health and development as well as professionals involved in the formulation and implementation of the nutrition policies and programmes. Poverty, Chronic Poverty and Poverty Dynamics Routledge

This book discusses critical policy issues that need to be addressed if India wishes to achieve the SDG 1 based elusive goal of ending poverty in the country. In its nine chapters, it takes the readers through trends and estimates of poverty in India, explains changes in the way it has been measured over time and the factors that lead to persistence of poverty, draws attention to the fact that hunger is both a cause and an effect of poverty and has gender and age dimensions too. The book revisits strategies that were successful in addressing poverty emanating from situations of conflict, presents a discussion on migration as a critical

coping mechanism among poor, analyses the links between ill health and poverty as well as education and poverty to draw attention to the policy imperatives that need attention. India's report card on poverty remains dismal even though there is recognition of the importance of reducing or eliminating or ending it at both national and global levels. Despite rapid economic growth and improvement on a range of development indicators, an unacceptably high proportion of India's population continues to suffer poverty in multiple dimensions. SDG 1 or "ending poverty in all its forms everywhere" cannot be achieved unless policies and poverty alleviation programmes understand and address chronic poverty and its dynamics. This requires that we estimate and understand the extent of poverty, the factors that lead to people getting stuck in it and the ways this can be addressed. It also requires understanding the dynamic nature of poverty or the fact that many of those who are poor are able to move out of poverty as well as the fact

that many others who are not poor become impoverished. These are the issues that are comprehensively examined and addressed in this book. In addition to students, teachers and researchers in the areas of development, economic growth, equity and welfare, the book is also of great interest to policy makers, planners and non-government agencies who are concerned with understanding and addressing poverty-related issues in the developing countries.

International literacy assessments have provided ample data for ranking nations, charting growth, and casting blame. Summarizing the findings of these assessments, which afford a useful vantage from which to view world literacy as it evolves, this book examines literate behavior worldwide, in terms of both the ability of populations from a wide variety of nations to read and the practice of literate behavior in those nations. Drawing on *The World's Most Literate Nations*, author Jack Miller's internationally released study, emerging trends in world literacy

and their relationships to political, economic, and social factors are explored. Literacy, and in particular the practice of literate behaviors, is used as a lens through which to view countries' economic development, gender equality, resource utilization, and ethnic discrimination. Above all, this book is about trajectories. It begins with historical contexts, described in terms of support for literate cultures. Based on a variety of data sources, these trends are traced to the present and then projected ahead. The literate futures of nations are discussed and how these relate to their economic and sociocultural development. This book is unique in providing a broader perspective on an intractable problem, a vantage point that offers useful insights to inform policy, and in bringing together an array of relevant data sources not typically associated with literacy status.

This case follows the development of the Naandi Safe Water Program from the view of Naandi's chairman and

founder, Dr. K. Anji Reddy. In 2002, Dr. Reddy saw a sign informing affluent guests at a hotel that the tap water in this toilet is potable. Realizing that the affluent people of India have access to clean and drinkable water even in the toilet, yet the majority of India's public health expenditure goes to treating waterborne diseases, Dr. Reddy became determined to bring safe drinking water to India's villages. Consistent with its professionalism, Naandi is not content with anecdotal evidence that clean water is eradicating poverty and improving lives. Naandi is conducting surveys before and after a plant is installed and in adjacent communities without plants to establish control groups for comparison. In the surveys, Naandi will establish baselines and track improvements in five categories: 1) health; 2) aspirations; 3) school attendance; 4) medical expenses; and 5) loss of wages.

The last decade of Gujarat and the rise of Narendra Modi first as the Chief

Minister and then as a national leader being the Prime Ministerial candidate of the Bharatiya Janata Party (BJP) has catapulted the Gujarat model and Narendra Modi into the national and international limelight. In the interim, especially in the last few years, there has been much literature on Gujarat and Narendra Modi. However, much of it is presented from a personality or political perspective. In the run-up to the national elections around May 2014, public interest goes beyond politics and personality. There is interest on some of the pioneering work done in Gujarat around governance and Panchayati Raj. The nation wants to know how Narendra Modi and his team of bureaucrats have been able to make a difference. There is curiosity about the interplay between politics, economy and policy. Crucially, the world wants to know if the Gujarat model is scalable to the national level. However, today's literature on Gujarat and Modi fails to cover his economics and governance vision. In the hurly-burly of politics, the innovations, the unique models and policies that Gujarat has seen over the

last decade seem to be getting overlooked. This book presents the vision behind Modi's thought process, and the action on the ground in terms of actual field reports and case studies. The book seeks to highlight the economic and development strategies adopted by Modi. The learnings from these would stand other states in good stead. Under Modi, Gujarat stands out for its long-term vision and impeccable execution. Governance is clearly not just about lofty speeches and promises but actual delivery; as is economics. One of the key ideas that the book brings out is that Modi is a proponent of both Inclusive Economics as well as Inclusive Governance. This in a sense is the essence of ModiNomics, a new phenomenon, which is discussed in the book. Sameer Kochhar has been interacting with Gujarat and Gujarat Government officials since 2003. For much of the last decade, the annual Skoch Summits organised by Kochhar have featured case studies on Gujarat's governance. Books, articles and reports have been done. Field assessments have been

carried out. He has captured the voices of the common man. He has also interacted with Modi to know his mind on Gujarat and the nation first hand. This book is an outcome of all the above and tells the Gujarat story in all its riveting details focusing on how Modi has brought about a sea change through his unique brand of ModiNomics.

As we move into the post-2015 era of the Sustainable Development Goals (SDGs), the world faces many seemingly intractable problems. Malnutrition should not be one of them. Countries that are determined to make rapid advances in malnutrition reduction can do so. If governments want to achieve the SDG target of ending all forms of malnutrition by 2030, they have clear pathways to follow. There are many levers to pull, and this report provides many examples of countries that have done so. Tackling malnutrition effectively is also key to

meeting many other SDG targets. Good nutrition signals the realization of people's rights to food and health. It reflects a narrowing of the inequalities in our world. Without good nutrition, human beings cannot achieve their full

potential. When people's nutrition status improves, it helps break the intergenerational cycle of poverty, generates broad-based economic growth, and leads to a host of benefits for individuals, families, communities,

and countries. Good nutrition provides both a foundation for human development and the scaffolding needed to ensure it reaches its full potential. Good nutrition, in short, is an essential driver of sustainable development.
