10.6069/9780295748856 Beginning in the late nineteenth century, India played a pivotal role in global conversations about population and reproduction. In *Reproductive Politics and the Making of Modern India*, Mytheli Sreenivas demonstrates how colonial administrators, postcolonial development experts, nationalists, eugenicists, feminists, and family planners all aimed to reform reproduction to transform both individual bodies and the body politic. Across the political spectrum, people insisted that

regulating reproduction was necessary and that limiting the population was essential to economic development. This book investigates the often devastating implications of this logic, which demonized some women's reproduction as the cause of national and planetary catastrophe. To tell this story, Sreenivas explores debates about marriage, family, and contraception. She also demonstrates how concerns about reproduction surfaced within a range of political questions—about poverty and crises of subsistence, migration and claims of national sovereignty, normative heterosexuality and drives for economic development. Locating India at the center of transnational historical change, this book suggests that Indian developments produced the very grounds over which reproduction was called into question in the modern world. The open-access

edition of *Reproductive Politics and the Making of Modern India* is freely available thanks to the TOME initiative and the generous support of The Ohio State University Libraries.

Natural Standard Herb & Supplement
Guide: An Evidence-Based Reference
Guide provides the high-quality, up-to-date,
unbiased information you need to advise
your patients. No other book can match its
expertise and attention to evidence! Each
monograph is concise and easy to read,
and includes uses, dosage information,
safety considerations, and interactions
with drugs and other herbs and
supplements. At-a-glance research
summaries and an alphabetical
organization allow for quick lookup in busy
settings! - Monographs for the 400 most
commonly used and prescribed herbs and
supplements — such as arnica, ginseng,
lavender, glucosamine, and blue cohosh —
provide the information you need for
effective clinical decision-making. - A
unique, evidence-based A-F grading scale
evaluates the efficacy of each herb and
supplement. - Unique! Rating scales show
at a glance the quality of available
evidence. - Updates are peer-reviewed,
and include new scientific evidence,
dosage recommendations, and more. -
Dosing information includes dosages for
adults and children, and methods for
administering. - Coverage of allergies, side
effects/warnings, and pregnancy/breast-
feeding promotes safety by indicating
when specific herbs and supplements
should not be used, or when caution is
required. - A review of evidence includes
detailed explanations of clinical trials cited
and conclusions drawn, especially as they
relate to specific diseases and conditions. -
Evidence tables summarize clinical trial
data and provide a quick reference for
clinical decision-making. - Unique! Cross-
referencing by condition and scientific
evidence grade provides a convenient
decision support tool, making it easy to
find the herbs and supplements that may
be used for the treatment of particular
conditions.

Herbal Medicine Clarkson Potter

This book provides information on the
incidence of fungi and mycotoxins in some
African countries, the health implications
and possible intervention control
strategies for mycotoxins in developing
countries and in Africa in particular. It will
therefore be of interest to students,
educators, researchers and policy makers
in the fields of medicine, agriculture, food
science and technology, trade and
economics. Food regulatory officers also
have quite a lot to learn from the book.
Although a lot of the generated data in the

area of mycotoxicology are available to
the developed world, information on the
subject area from Africa is scanty and not
usually available in a comprehensive form.
This book attempts to address the gap.
Being an open access book, it will be of
great benefit to scientists in developing
countries who have limited access to
information due to lack of funds to pay or
subscribe for high quality journals and
data from commercial publishing and
database companies.

By all indicators, the reproductive health
of Americans has been deteriorating since
1980. Our nation is troubled by rates of
teen pregnancies and newborn deaths that
are worse than almost all others in the

Western world. Science and Babies is a
straightforward presentation of the major
reproductive issues we face that suggests
answers for the public. The book discusses
how the clash of opinions on sex and
family planning prevents us from making a
national commitment to reproductive
health; why people in the United States
have fewer contraceptive choices than
those in many other countries; what we
need to do to improve social and medical
services for teens and people living in
poverty; how couples should "shop" for a
fertility service and make consumer-wise
decisions; and what we can expect in the
future—featuring interesting accounts of
potential scientific advances.

The present book is a collection of ten
original research articles and reports,
associated with selected topics in
agricultural chemistry. The discussed
issues are organized in four sections:
Classification and labeling of active
substances in plant protection products,
Environmental and stress plant physiology
and behavior, Antimicrobial and
antioxidant potential of plant extracts, and
Pollutants analysis and effects. The
information provided in this book should
be of interest for academic researchers
and for agriculturalists.

Medicinal Foods IARC

The chemicals from plant sources,
generally termed as phytochemicals, play
an important role in acceptance or
rejection of the plant by the pests as they
could be distasteful or toxic on one hand
or on the other hand specialist herbivores
have the capability to feed on many such
chemicals, as they are able to process
these natural products in a manner that is
beneficial to them. In the wake of
increasing environmental degradation due
to burgeoning synthetic chemicals, there
has been a process going on to rediscover
the usefulness of plants and herbs and a
continued effort for more than 2 decades
has been to study the green products for
cures for several ailments and pest
management. In fact, according to Indian
Medicinal Plants: A Sectoral Study, the
global trade for medicinal plants amounts
to about US \$ 60 billion and the world
demand continues to grow at the rate of 7
per cent per annum. Although many such
plants are known in literature, neem has
been one of trees with mani-fold virtues.
Indian neem tree, *Azadirachta indica* A.
Juss, which is a large evergreen tree, is an
outstanding example among plants that
has been subject matter of numerous
scientific studies concerning its utilization
in medicine, industry and agriculture. So

far neem preparations have been evaluated against more than 500 species of insects and more than 400 hundred are reported to be susceptible at different concentrations.

The pharmacopoeias of most African countries are available and contain an impressive number of medicinal plants used for various therapeutic purposes. Many African scholars have distinguished themselves in the fields of organic chemistry, pharmacology, and pharmacognosy and other areas related to the study of plant medicinal plants. However, until now, there is no global standard book on the nature and specificity of chemicals isolated in African medicinal plants, as well as a book bringing together and discussing the main bioactive metabolites of these plants. This book explores the essence of natural substances from African medicinal plants and their pharmacological potential. In light of possible academic use, this book also scans the bulk of African medicinal plants extract having promising pharmacological activities. - The book contains data of biologically active plants of Africa, plant occurring compounds and synthesis pathways of secondary metabolites - This book explores the essence of natural substances from African medicinal plants and their pharmacological potential - The authors are world reknowned African Scientists

Reproductive Politics and the Making of Modern India Lippincott Williams & Wilkins

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Phytoremediation of Environmental Pollutants Lippincott Williams & Wilkins

Phytoremediation aids to augment

bioremediation as it uses broad range plants to remediate soil, sediment, surface water and ground water that have been contaminated with toxic metals, organic, pesticides and radionuclides. This book serves to disseminate detailed up to date knowledge regarding the various aspects of phytoremediation and plant-microbe interaction. The book highlights process and molecular mechanisms for industrial waste detoxification during phytoremediation in wetland plants, role of endophytic bacteria for phytoremediation of environmental pollutants, constructed wetland treatment system for treatment and recycling of hazardous wastewater, amongst other relevant topics. Key Features: Focuses on phytoremediation process for different pollutants, mainly heavy metal detoxification in the presence of other co-pollutants. Includes plant-soil-microbe interactions in phytoremediations and remediation of contaminated water. Explores life cycle assessment of industrial waste contaminated site with organic pollutants. Discusses hyperaccumulator versus non-hyperaccumulator plants for environmental waste management. Includes bacterial assisted phytoremediation and siderophore formation in specific environmental conditions.

Handbook of Fertility: Nutrition, Diet, Lifestyle and Reproductive Health focuses on the ways in which food, dietary supplements, and toxic agents, including alcohol and nicotine affect the reproductive health of both women and men. Researchers in nutrition, diet, epidemiology, and endocrinology will find this comprehensive resource invaluable in their long-term goal of understanding and improving reproductive health. This book brings together a broad range of experts researching the different aspects of foods and dietary supplements that promote or detract from reproductive health. Section One contains several overview chapters on fertility, how it is assessed, and how it can be affected by different metabolic states, nutritional habits, dietary supplements, the action of antioxidants, and lifestyle choices. Sections Two and Three consider how male and female fertility are affected by obesity, metabolic syndrome, hormonal imbalance, and even bariatric surgery. Section Four explores the ways diet, nutrition, and lifestyle support or retard the success of in vitro fertilization, while Section Five explores how alcohol and other drugs of abuse lower fertility in both women and men. - Explores how alcohol, nicotine, and other drugs of abuse disrupt and impair reproductive health - Reviews studies of common conditions such as obesity and metabolic syndrome and their effect on fertility and reproductive health - Investigates the components of foods and dietary supplements, in particular

oxidative stress and antioxidants - Presents the nutritional effects of foods and dietary supplements and their benefits and risks relating to reproductive health

Garcinia kola (bitter kola), also known as African wonder nut, belongs to the family guttiferaceae and grows in coastal rainforests in the South-Western and South-Eastern parts of Nigeria. Traditionally, the nuts of bitter kola are chewed as masticatory substance to stimulate the flow of saliva. The kernels of the nuts are widely traded and eaten as a stimulant. Bitter kola is also highly valued because of its medicinal benefits. The nuts are chewed for aphrodisiac effects or used to cure cough-dysentery or chest cold in herbal medicine. In this present day, new initiatives in pharmaceutical and also livestock industries are seeking to promote the use of alternative materials that combine the effects of nutritional and medicinal properties, simultaneously. This is expected among others benefits to reduce the high cost of production in the livestock industry as a result of the reduction in dual costs of feed and drugs. Further research was made into indigenous fruits trees or plants that possesses both nutritional and medicinal properties. Bitter kola been a plant that possesses both medicinal and nutritive value and every more was emerged, and

further investigations based on its current information in relation to its nutritional and medicinal properties has been aggregated. This seeks to aggregate current information on the characteristics of bitter kola based on its history and origin as an indigenous medicinal plant in the rain forest of central and western African. Its botanical and agronomical characteristics are also discussed further; the bitter kola tree produces reddish yellowish or orange coloured fruit with each fruit containing two or four yellow seeds and a sour tasting pulp. During cultivation of bitter kola, it is either cultivated by seeds or by cutting, by the preparation of a suitable seed bed for planting and germination or by cutting from very tender branches and stems with young healthy leaves. The nutrient and chemical composition of bitter kola as reported were also illustrated based on their various constituents. The moisture content, protein, fiber, ash and nitrogen free extracts have various amount of percentage dry matter and they are 14.60% 0.58%, 0.10%, 5.00%, 91.32% and 57.54% respectively and the vitamins as well as mineral composition also have various dry weight basis. The phytochemicals constituents of bitter kola as described are phenols (0.11 mg/100g), Alkaloids (0.36mg/100g), tannins (0.26mg/100g) and flavonoids

(1.98mg/100g). Bitter kola basically performs various other functions like medicinal uses e.g helps in weight loss, treats arthritics, anti-poison, diabetes, malaria etc.

The idea that teachers love children is often taken for granted in education. Rarely is the idea of love itself examined. Bringing together the work of educators, curriculum theorists and clinical psychoanalysts, and drawing upon autobiographical and narrative case studies, this groundbreaking collection examines the collision of love and learning, including the ways in which such intersections are provoked, repressed and denied. Contributors turn to psychoanalysis to explore questions of love in all of its varying permutations - ambivalence, sexuality, hatred, desire, projection, and loss - in order to demonstrate how the social ramifications of such work is critical to the ways teachers are currently being prepared for life in the classroom.
