History of the Upper Guinea Coast

HarperCollins

This book has a fundamental objective. The objective of this research is divided into general objectives and specific objectives. The general objective is to analyze the impact of the economic cooperation programs of the United States on the economic development of Ivory Coast in order to make recommendations and propose solutions and prospects to strengthen the promotion of the economic cooperation of Ivory Coast with the United States. Specifically, this research is focused on evaluating the effect of American trade programs (AGOA, BIT, BUILD Act, AWEF, Prosper Africa and Power Africa) in order to allow Ivory Coast and all the eligible African countries to derive maximum benefit from these programs and to assess the effect of the competitive presence of the United States, China, and the European Union for the economic development of the Ivory Coast.

Côte d'Ivoire remains one of the most intriguing countries in sub-Saharan Africa. It appeared well on its way to becoming a model of development under its single political party and charismatic founding father, Félix Houphouët-Boigny, when it fell on hard economic times in the 1980s. Poor management of the socio-economic challenges by Houphouët-Boigny's successors produced disastrous political consequences, including unprecedented political violence, the first-ever successful military coup, and two civil wars, culminating in former President Laurent Gbagbo being sent to the International Criminal Court (ICC) in The Hague to stand trial for war crimes. This third edition of Historical Dictionary of Cote d'Ivoire (The Ivory Coast) contains a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 700 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent access point for students, researchers, and anyone wanting to know more about the Cote d'Ivoire.

Reconstituting the State in Africa

National Academies Press

Scenes of starvation have drawn the world's attention to Africa's agricultural and environmental crisis. Some observers question whether this continent can ever hope to feed its growing population. Yet there is an overlooked food resource in sub-Saharan Africa that has vast potential: native food plants. When experts were asked to nominate African food plants for inclusion in a new book, a list of 30

species grew quickly to hundreds. All in all, Africa has more than 2,000 native grains and fruitsâ€"lost" species due for rediscovery and exploitation. This volume focuses on native cereals, including: African rice, reserved until recently as a luxury food for religious rituals. Finger millet, neglected internationally although it is a staple for millions. Fonio (acha), probably the oldest African cereal and sometimes called "hungry rice." Pearl millet, a widely used grain that still holds great untapped potential. Sorghum, with prospects for making the twenty-first century the "century of sorghum." Tef, in many ways ideal but only now enjoying budding commercial production. Other cultivated and wild grains. This readable and engaging book dispels myths, often based on Western bias, about the nutritional value, flavor, and yield of these African grains. Designed as a tool for economic development, the volume is organized with increasing levels of detail to meet the needs of both lay and professional readers. The authors present the available information on where and how each grain is grown, harvested, and processed, and they list its benefits and limitations as a food source. The authors describe "next steps" for increasing the use of each grain, outline research needs, and address issues in building commercial production. Sidebars cover such interesting points as the potential use of gene mapping and other "high-tech" agricultural techniques on these grains. This fact-filled volume will be of great interest to agricultural experts, entrepreneurs, researchers, and individuals concerned about restoring food production, environmental health, and economic opportunity in sub-Saharan Africa. In 1987, the University of Chicago Press published *Primate Societies*, the standard reference in the field of primate behavior for an entire generation of students and scientists. But in the twenty-five years since its publication, new theories and research techniques for studying the Primate order have been developed, debated, and tested, forcing scientists to revise their understanding of our closest living relatives. Intended as a sequel to *Primate Societies*, *The Evolution of Primate Societies* compiles thirty-one chapters that review the current state of knowledge regarding the behavior of nonhuman primates. Chapters are written by the leading authorities in the field and organized around four major adaptive problems primates face as they strive to grow, maintain themselves, and reproduce in the wild. The inclusion of chapters on the behavior of humans at the end of each major section represents one particularly novel aspect of the book, and it will remind readers what we can learn about ourselves through research on nonhuman primates. The

final section highlights some of the innovative and cutting-edge research designed to reveal the similarities and differences between nonhuman and human primate cognition. The *Evolution of Primate Societies* will be every bit the landmark publication its predecessor has been.

The Evolution of UN Sanctions Elsevier
Originally published in 1971 and written in English and French, with summaries in both languages, the essays in this volume discuss the effects of internal economic and political conditions and of external relations on the development of trade and markets in West Africa from the period of the slave trade to the growth in the 20th century in production for overseas markets and rapidly expanding urban centres. Other essays discuss various aspects of local and regional trade and markets from the nineteenth century onwards.

The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals (Einstein), institutions and disciplines (Mathematics), general themes (Romantic Science) and central concepts (Paradigm and Fact). The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn.

Genetics and Evolution of Infectious Diseases is at the crossroads between two major scientific fields of the 21st century: evolutionary biology and infectious diseases. The genomic revolution has upset modern biology and has revolutionized our approach to

ancient disciplines such as evolutionary studies. In particular, this revolution is profoundly changing our view on genetically driven human phenotypic diversity, and this is especially true in disease genetic susceptibility. Infectious diseases are indisputably the major challenge of medicine. When looking globally, they are the number one killer of humans and therefore the main selective pressure exerted on our species. Even in industrial countries, infectious diseases are now far less under control than 20 years ago. The first part of this book covers the main features and applications of modern technologies in the study of infectious diseases. The second part provides detailed information on a number of the key infectious diseases such as malaria, SARS, avian flu, HIV, tuberculosis, nosocomial infections and a few other pathogens that will be taken as examples to illustrate the power of modern technologies and the value of evolutionary approaches. - Takes an integrated approach to infectious diseases - Includes contributions from leading authorities - Provides the latest developments in the field

The human foot is a unique and defining characteristic of our anatomy. Most primates have grasping, prehensile feet, whereas the human foot stands out as a powerful non-grasping propulsive lever that is central to our evolution as adept bipedal walkers and runners and defines our lineage. Very few books have compiled and evaluated key research on the primate foot and provided a perspective on what we know and what we still need to know. This book serves as an essential companion to "The

Evolution of the Primate Hand” volume, also in the Developments in Primatology series. This book includes chapters written by experts in the field of morphology and mechanics of the primate foot, the role of the foot in different aspects of primate locomotion (including but not limited to human bipedalism), the “hard evidence” of primate foot evolution including fossil foot bones and fossil footprints, and the relevance of our foot’s evolutionary history to modern human foot pathology. This volume addresses three fundamental questions: (1) What makes the human foot so different from that of other primates? (2) How does the anatomy, biomechanics, and ecological context of the foot and foot use differ among primates and why? (3) how did foot anatomy and function change throughout primate and human evolution, and why is this evolutionary history relevant in clinical contexts today? This co-edited volume, which relies on the insights of leading scholars in primate foot anatomy and evolution provides for the first time a comprehensive review and scholarly discussion of the primate foot from multiple perspectives. It is accessible to readers at different levels of inquiry (e.g., undergraduate/graduate students, postdoctoral research, other scholars outside of biological anthropology). This volume provides an all-in-one resource for research on the comparative and functional morphology and evolution of the primate foot.

Historical Dictionary of Cote d'Ivoire (The Ivory Coast) University of Chicago Press Marking the 50th anniversary of UN sanctions, this work examines the evolution of sanctions from a primary instrument of economic warfare to a tool of prevention and protection against

global conflicts and human rights abuses. The rise of sanctions as a versatile and frequently used tool to confront the challenges of armed conflicts, terrorism, the proliferation of weapons of mass destruction and violations of international humanitarian and human rights law, is rooted in centuries of trial and error of coercive diplomacy. The authors examine the history of UN sanctions and their potential for confronting emerging and future threats, including: cyberterrorism and information warfare, environmental crimes, and corruption. This work begins with a historical overview of sanctions and the development of the United Nations system. It then explores the consequences of the superpowers' Cold War stalemate, the role of the Non-Aligned Movement, and the subsequent transformation from a blunt, comprehensive approach to smart and fairer sanctions. By calibrating its embargoes, asset freezes and travel bans, the UN developed a set of tools to confront the new category of risk actors: armed non-state actors and militias, global terrorists, arms merchants and conflict minerals, and cyberwarriors. Section II analyzes all thirty UN sanctions regimes adopted over the past fifty years. These narratives explore the contemporaneous political and security context that led to the introduction of specific sanctions measures and enforcement efforts, often spearheaded for good or ill by the permanent five members of the Security Council. Finally, Section III offers a qualitative analysis of the UN sanctions system to identify possible areas for improvements to the current Security Council structure dominated by the five veto-wielding victors of World War II. This work will be of interest to researchers and

practitioners in criminal justice, particularly with an interest in security, as well as related fields such as international relations and political science.

Rainforests are rapidly being cleared in the humid tropics to keep pace with food demands, economic needs, and population growth. Without proper management, these forests and other natural resources will be seriously depleted within the next 50 years. *Sustainable Agriculture and the Environment in the Humid Tropics* provides critically needed direction for developing strategies that both mitigate land degradation, deforestation, and biological resource losses and help the economic status of tropical countries through promotion of sustainable agricultural practices. The book includes: A practical discussion of 12 major land use options for boosting food production and enhancing local economies while protecting the natural resource base. Recommendations for developing technologies needed for sustainable agriculture. A strategy for changing policies that discourage conserving and managing natural resources and biodiversity. Detailed reports on agriculture and deforestation in seven tropical countries.

Six contributors explore the role of governments in accelerating the rate of forest destruction by providing direct and indirect subsidies to support what would otherwise be non-commercial logging operations. Without these financial incentives, most timber operations in the tropics would cease. In a series of country-by-country investigations, including examples from the developed and developing worlds, this book documents the government policies that are leading to the misuse of forest resources. Each is written by an authority on the country, and each contains descriptive, analytical and empirical material on key policies and their effects. The final country analysis focuses on the United States, where the consequences of the subsidized timber sales by the US Forest Service from most of the national forests are discussed. The book concludes with an overview of the impact of forest policies and the role of bilateral and multilateral agencies in their formulation. By directing attention toward the political dimension involved in forest clearance, this book will provide a clearer insight into the basic reasons why forests continue to be destroyed despite the outcry raised by conservationists.

Contributors to this volume highlight the failure and socio-economic and political problems of post-colonial African state and make constructive and convincing suggestions of how the problems can be addressed. They do not argue for the scrapping of the state but its reconstitution in ways that will enable it to be people's-oriented.
