## **CAMERON CRISTINA**

---

*Pediatric Pharmacotherapy Self Assessment* American College of Clinical Pharmacy

The authors have taught statistics and given statistics workshops in France and the Netherlands for almost 4 years by now. Their material, mainly on power point, consists of 12 lectures that have been continuously changed and improved by interaction with various audiences. For the purpose of the current book simple English text has been added to the formulas and figures, and the power points sheets have been rewritten in the format given by

Kluwer Academic Publishers. Cartoons have been removed, since this is not so relevant for the transmission of thought through a written text, and at the end of each lecture (chapter) a representative number of questions and exercises for self-assessment have been added. At the end of the book detailed answers to the questions and exercises per lecture are given. The book has been produced with the same size and frontpage as the textbook "Statistics Applied To Clinical Trials" by the same authors and edited by same publishers ( 2nd Edition, DordrechtBostonLondon, 2002), and can be applied together with the current self-assessment book or separately. The current self-assessment book is different from the textbook, because it focuses on the most important aspects rather than trying to be

complete. So, it does not deal with all of the subjects assessed in the textbook. Instead, it repeats on and on the principle things that are needed for every analysis, and it gives many examples that are further explained by arrows in the figures.

**PSAP, Pharmacotherapy Self-assessment Program: Science and practice of pharmacotherapy I, Science and practice of pharmacotherapy II** ASHP

Pediatric pharmacotherapy, a growing practice area, will become a board certified specialty in the USA 2015. Yet, with little clinical data on the efficacy of drugs used for children and their other special needs, these small patients can be your biggest challenge. Now there is a very effective way to assess and advance your pediatric pharmacotherapy skills, on your own time, at your own pace: ASHP's new Pediatric Pharmacotherapy Self Assessment. Sandra Benavides and Milap C. Nahata, co-lead editors of a major pediatric pharmacotherapy textbook, and Hanna Phan, Assistant Professor in Pharmacy and Pediatrics at the University Of Arizona College Of Medicine, have created this unique resource. A practical learning tool for all levels of proficiency, it allows students, residents, and practicing pharmacists alike to strengthen their knowledge and analytical skills through 32 cases involving varying degrees of diagnostic complexity. This book is based on real life situations, these cases present challenges in the use of supplements, OTC, drug formulations, and all other therapies for neonates, children, and adolescents for pediatric pharmacotherapy. This Self Assessment is a professional development tool for all areas of concern and levels of practice that can benefit you and your youngest patients for years to come.

A practical learning tool for all levels of proficiency, it allows students, residents, and practicing pharmacists alike to strengthen their knowledge and analytical skills through 32 cases involving varying degrees of diagnostic complexity. Based on real life situations, these cases present challenges in the use of supplements, OTC, drug formulations, and all other therapies for neonates, children, and adolescents. This Self Assessment is a professional development tool for all areas of concern and levels of practice that can benefit you and your youngest patients for years to come.

*PSAP 2014 Book 2 (Chronic Illnesses)* ASHP

Infectious disease (ID) is a constant concern for pharmacy clinicians, with far too few specialists to meet the demand. That means that while more and more pharmacists are seeking the added qualification in infectious disease along with other Board Certifications, many clinical pharmacists have to meet a higher standard as de facto ID specialists. Further, treatment of infectious disease involves a good deal of grey area, which means that even the experts need a way to verify their mastery Now, Infectious Disease Pharmacotherapy Self Assessment, by

Lea Eiland and Diane Ginsburg, bring you thorough and relevant cases where questions are delivered with varying degrees of difficulty, allowing you to truly gauge your level of understanding of complex ID pharmacotherapy problems. Three levels of difficulty offers users a way to assess their mastery of ID topics.
