No specialty faces more diverse and challenging ethical dilemmas than palliative medicine. What is the best way to plan ahead for the end of life? How should physicians respond when patients refuse treatments likely to be beneficial, or demand treatments not likely to be? Who makes medical decisions for patients who are too ill to decide for themselves? Do patients have the "right to die" (and, if so, what exactly does that mean)? In this volume noted palliative care physician

and bioethicist Robert C. Macauley addresses a broad range of issues from historical, legal, clinical, and ethical perspectives. Clinically nuanced and philosophically rigorous, Ethics in Palliative Care analyzes hot-button subjects like physician assisted dying and euthanasia, as well as often overlooked topics such as pediatric palliative care, organ donation, palliative care research, and moral distress. Drawing on real cases yet written in non-technical language, this complete guide will appeal to both medical professionals and lay readers.

What is it like to be sued for medical malpractice? Bad medical outcomes traumatize patients but they also traumatize physicians. The litigation that often follows is a profoundly human, rather than just a legal experience. Although every physician's case is different, this book shows how each case goes through the same judicial stages of complaint, discovery, depositions, motions, and delays that lead to trial, settlement, or being dropped. It also gives doctors an understanding of how lawyers think and work to help defendants. Written by a physician and a lawyer, the book

provides unique insights - through real-life stories - into the personal experience of litigation as well as recommendations for dealing with each of the legal process. It also includes up-to-date reviews of HIPAA legislation, the controversial subject of disclosure, and recent developments in the law affecting medical practitioners. Only about thirty percent of plaintiffs win their cases against doctors, but the journey from bedside to witness stand tests both the personal character and the professional skills of those accused. This well-documented book will help doctors understand and navigate the legal system while honoring their own ideals and emerging changed but stronger from the experience.

A doctor on the front lines of hospital care illuminates one of the most important and controversial social issues of our time. It is harder to die in this country than ever before. Though the vast majority of Americans would prefer to die at home—which hospice care provides—many of us spend our last days fearful and in pain in a healthcare system ruled by high-tech procedures and a philosophy to “fight disease and illness at all cost.” Dr. Ira Byock, one of the foremost palliative-care physicians in the country, argues that how we die represents a national crisis today. To ensure the best possible elder care, Dr. Byock explains we must not only remake our healthcare system but also move beyond our cultural aversion to thinking about death. *The Best Care Possible* is a compelling meditation on medicine and ethics told through page-turning life-or-death medical drama. It has the power to lead a new national conversation.

Physician-Assisted Death is the eleventh volume of *Biomedical Ethics Reviews*. We, the editors, are pleased with the response to the series over the years and, as a result, are happy to continue into a second decade with the same general purpose and zeal. As in the past, contributors to projected volumes have been asked to summarize the nature of the literature, the prevailing attitudes and arguments, and then to advance the discussion in some way by staking out and arguing forcefully for some basic position on the topic targeted for discussion. For the present volume on Physician-Assisted Death, we felt it wise to enlist the services of a guest editor, Dr. Gregg A. Kasting, a practicing physician with extensive clinical knowledge of the various problems and issues encountered in discussing physician assisted death. Dr. Kasting is also our student and just completing a graduate degree in philosophy with a specialty in biomedical ethics here at Georgia State University. Apart from a keen interest in the topic, Dr. Kasting has published good work in the area and has, in our opinion, done an excellent job in taking on the lion's share of editing this well-balanced and probing set of essays. We hope you will agree that this volume significantly advances the level of discussion on physician-assisted euthanasia. Incidentally, we wish to note that the essays in this volume were all finished and committed to press by January 1993.

Being present at the bedside-and even at the moment of death-can become an experience embedded in the minds and souls of family members for generations. It is a deeply emotional time, one of relief and sadness. Anyone who has taken that final journey with a loved one will never, ever forget those moments. Dr. Edward Creagan has dedicated his life to death. This book is about navigating those last days, at the bedside, and saying farewell with hope, love, and compassion.

A Few Months to Live describes what dying is like from the perspectives of nine terminally ill individuals and their caregivers. Documenting a unique study of end-of-life experiences that included detailed conversations in home care settings, the book focuses on how participants lived their daily lives, understood their illnesses, coped with symptoms-especially pain-and searched for meaning or spiritual growth in their final months of life. The accounts are presented largely in the participants' own words, illuminating both the medical and non-medical challenges that arose from the time each learned the "bad news" through their final days of life and memorial services. Describing the nationwide crisis that surrounds end-of-life care, the authors contend that informal caregiving by relatives and close friends is an enormous and too-often invisible resource that deserves close and public attention. By incorporating not only the ill person's but also the family's perspective, they portray the nine participants in the contexts of their daily lives and relationships rather than simply as patients. Addressing such issues as palliative care, quality of life, financial hardship, grief and loss, and communications with medical personnel, the authors identify how families, professionals, and communities can respond to the challenges of terminal illness and the

need to confront life's end.
