The rapidly changing nature of animal production systems, especially increasing intensification and globalization, is playing out in complex ways around the world. Over the last century, livestock keeping evolved from a means of harnessing marginal resources to produce items for local consumption to a key component of global food chains. Livestock in a Changing Landscape offers a comprehensive examination of these important and far-reaching trends. The books are an outgrowth of a collaborative effort involving international nongovernmental organizations including the United Nations Food and Agriculture Organization (UN FAO), the International Livestock Research Institute (ILRI), the Swiss College of Agriculture (SHL), the French Agricultural Research Centre for International Development (CIRAD), and the Scientific Committee for Problems of the Environment (SCOPE). Volume 1 examines the forces shaping change in livestock production and management; the resulting impacts on landscapes, land use, and social systems; and potential

policy and management responses. Volume 2 explores needs and draws experience from region-specific contexts and detailed case studies. The case studies describe how drivers and consequences of change play out in specific geographical areas, and how public and private responses are shaped and implemented. Together, the volumes present new, sustainable approaches to the challenges created by fundamental shifts in livestock management and production, and represent an essential resource for policy makers, industry managers, and academics involved with this issue.

Given novel infectious diseases such as COVID-19 and antibiotic resistance new antimicrobial discovery is an important research area. Considering that nature is a vast source of bioactive

molecules with antimicrobial activity, the main aim of this book is to present a comprehensive outlook of current research in the field of natural antimicrobials. It discusses the antimicrobial activity of medicinal plants, beehives, and mushrooms with a global coverage of antimicrobial agents from rich forests of Brazil (Amazon), North-Eastern forests of Peru, Argentina, Colombia, India, Bangladesh, Nepal, Middle East, Turkey, Croatia, Greece, Germany and Russia. The book covers the results of the in vitro screening of antimicrobial activities of extracts and isolated compounds from natural origins. It is divided into three sections: i) Section I, includes natural antimicrobials from plants; ii) Section II incorporates antimicrobial agents/secondary metabolites from plants, and (iii) Section III focuses on antimicrobials from mushrooms, beehive and delivery systems for different types of antimicrobials. Promising Antimicrobials From Natural Products is immensely useful for post graduate students, researchers in plant science, microbiology, biotechnology, pharmacology, pharma companies and those who are interested in herbal, eco-friendly, cost-effective and sustainable antimicrobials

Comprehensive Virology Virus Z: Beginning of the End

An unknown virus, ordered to be silently researched by the government, is in the hands of a tired,

overworked CDC Scientist. A small mistake leading to an infection. It started with one. One person becoming what no one truly believed to be real. James Ericson witnessed the downfall of Floor Three in the Atlanta CDC Lab. He saw a man he admired turn into a flesh-devouring monster. Now, with just his blood stained lab coat and a mysterious flash drive, he must attempt to outrun the virus. Can he make it to safety before it catches him, or will he end up just like the other mindless zombies beginning to fill the streets only one thing on their mind? How long can he survive as he stares death in the face?

Progress Report MDPI

On a regular school day in a small California town, a mysterious outbreak begins at a local high school. Students and teachers all around start turning into blood-thirsty creatures, and just three students are able to escape the school grounds to make their way home. It is not long before they realize they may be the only people in town still alive. Learning quickly to adapt to an unimaginable environment, they must find a way to survive. When Dustin Grey and his friends start to piece together the truth, they realize that saving their own lives will not be enough. With determination and ingenuity that cannot be taught in a classroom, it is up to Dustin and the few survivors he meets along the way to form an unlikely team that must fight to protect its own and save all of humanity from . . . the Z virus.

This detailed volume compiles key methods and techniques used to establish some of the structural and functional aspects of Z-form nucleic acids. Beginning with chapters on characterizing Z-DNA, the book continues by exploring structure determination techniques, gene- and genome-targeting methods and genome-wide approaches, Z-RNA study, and much more. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step and readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, Z-DNA: Methods and Protocols serves as an ideal guide for students and researchers curious about this unique Z nucleic acid as an area of investigation, aiming to help the field grow, flourish, and unravel the hidden and novel roles of Z. Chapter 1 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com. This is an open access book.

transmission with direct effects on morbidity and mortality. The ongoing transmission of mosquito-borne diseases places a heavy toll on already fragile health systems with local economic and social repercussions. This handbook provides practical and basic biological information on the behaviours and distribution of the mosquitoes of the Pacific region as they are presently known. This handbook is a foundational reference for all those working towards reducing the transmission of mosquito-borne diseases in the region. An overview of the diversity and distribution of mosquitoes throughout the Pacific, including checklists for the species present in each of the 22 Pacific Island countries and territories, is provided. For the mosquitoes that are common and/or of medical importance, one-page profiles are provided that include information about their key behaviours.

""What I liked most about this novel, other than the zombies of course, is that the characters are very real, you really care about them, and this makes it much more real than any other zombie novel. And it is really cool to see resourceful children that take action, and not comic book kind of action, but the real genius action that kids are capable of. Sounds crazy, but this book, about zombies, will make you cry, and it will make you think. I can't think of a better combo. Great take on zombies, too! Very cool book."" - Internet review A zombie novel, finally, that shows a realistic, vivid representation of what a true zombie apocalypse might be like (i.e., it would not be a fun-fest of exploding heads and salty wisecracks). This is a novel that puts terror right back where it deserves to be...in your face.

Lassa virus causes Lassa fever disease in several countries in West Africa, where it is estimated to infect up to half million people causing roughly five thousand deaths each year. This deadly virus has also been introduced in multiple occasions into the western world, including the United States, United Kingdom, Netherlands, Sweden, and Germany. Lassa virus infection, which is often misdiagnosed, can lead to a wide range of disease symptoms ranging from mild flu-like symptoms to bleeding disorders, multi-organ failure, and death. Despite some major discoveries made in recent years of research on Lassa fever, there are still many unresolved key issues that hamper the development of effective vaccines and therapies. Some of these issues include a detailed understanding of the viral and participating host factors in completing the virus life cycle, in mediating disease pathogenesis or protection, and in activating or suppressing host immune responses against virus infection. This book is devoted to understanding some of these important issues. Expert and timely contributions in the form of editorial and original research and review articles on Lassa fever viral replication, disease pathogenesis and protection, host immune modulations, and other related hot topics are presented in this publication.

Hardbound. As its title suggests, this book is intended to give exhaustive information on virus infections and diseases occurring in ruminants. Each virus and corresponding disease is described in a separate chapter, and the chapters are ordered according to current virus classification. Contributing authors are experts on the virus and disease they describe. Where necessary, the text is accompanied by tables and pictures. The accent is placed on diagnosis of the disease by clinical observations including epizootological data. There is also a description of the laboratory procedures of diagnostic virology, and suggestions concerning control measures (e.g. vaccination and/or eradication policy). This book should prove indispensable to: the practising veterinarian, by facilitating recognition of a viral disease, and giving advice on collecting appropriate specimens for laboratory investigation; the veterinary virologist by aiding the choice of appropriate
