100 Contemporary Concrete Buildings

Braun Publish,Csi

"Japan's Wooden Heritage: A Journey Through a Thousand Years of Architecture brings together essays by architectural historian Terunobu Fujimori and photographs by Mitsumasa Fujitsuka, and commentary by structural engineer Mikio Koshihara that originally appeared in *Kateigahō*, Japan's premier magazine of art and culture, supplemented with additional essays by

Mitsumasa Fujitsuka. What distinguishes this volume is its selection of 23 locations--including well-known temples and shrines but also lesser-known structures--to represent a broad scope of architectural styles, functions, and time periods; the outstanding photographs; and the distinct approaches taken by each of the three essayists"--Publisher's description

White Pine Series of Architectural Monographs IMAJlbooks

At the forefront of the postwar phenomenon known as tropical modernism, Vladimir Ossipoff (1907-1998) won recognition as the

"master of Hawaiian architecture." Although he practiced at a time of rapid growth and social change in Hawaii, Ossipoff criticized large-scale development and advocated environmentally sensitive designs, developing a distinctive form of architecture appropriate to the lush topography, light, and microclimates of the Hawaiian islands. This book is the first to focus on Ossipoff's career, presenting significant new material on the architect and situating him within the tropical modernist movement and the cultural context of the Pacific region. The authors discuss how Ossipoff synthesized Eastern and Western influences, including Japanese building techniques and modern architectural principles. In particular, they

demonstrate that he drew inspiration from the interplay of indoor and outdoor space as advocated by such architects as Frank Lloyd Wright, applying these to the concerns and vernacular traditions of the tropics. The result was a vibrant and glamorous architectural style, captured vividly in archival images and new photography. As the corporate projects and private residences that Ossipoff created for such clients as IBM, Punahou School, Linus Pauling, Jr., and Clare Boothe Luce surpass their fiftieth anniversaries, critical assessment of these structures, offered here by distinguished scholars in the field, will illuminate Ossipoff's contribution to the universal challenge of making architecture that is delightfully particular to its place and durable over time.

Solid Wood Taschen America Llc
 "The relationship between contemporary architecture and nature is fundamental to today's creativity. Some architects reject nature or imagine that they can create an artificial world of their own - while others are seeking new ways, aided by science and the computer, to chart new directions for the buildings of tomorrow. From ecologically-oriented designs to the most astonishing new forms, this book shows how essential nature remains to architecture."--BOOK JACKET.

Experiencing Architecture, second edition Routledge

* The best-selling text and reference on wood structure design * Incorporates the latest National Design Specifications, the 2003 International Building Code and the

latest information on wind and seismic loads

A classic examination of superb design through the centuries. Widely regarded as a classic in the field, *Experiencing Architecture* explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding

pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for place, materials and use, resulting in “a remarkably suitable comeliness.” While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract, individual pursuit, but also from one's shared,

everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. Experiencing Architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered “what instrument the architect plays on.”

History of Construction Cultures Volume 1 contains papers presented at the 7ICCH - Seventh International Congress on Construction History, held at the Lisbon School of Architecture, Portugal, from 12 to 16 July, 2021. The conference has been organized by the Lisbon School of Architecture (FAUL), NOVA School of

Social Sciences and Humanities, the Portuguese Society for Construction History Studies and the University of the Azores. The contributions cover the wide interdisciplinary spectrum of Construction History and consist on the most recent advances in theory and practical case studies analysis, following themes such as: - epistemological issues; - building actors; - building materials; - building machines, tools and equipment; - construction processes; - building services and techniques ; - structural theory and analysis ; - political, social and economic aspects; - knowledge transfer and cultural translation of construction cultures. Furthermore, papers presented at thematic sessions aim at covering important problematics, historical

periods and different regions of the globe, opening new directions for Construction History research. We are what we build and how we build; thus, the study of Construction History is now more than ever at the centre of current debates as to the shape of a sustainable future for humankind. Therefore, History of Construction Cultures is a critical and indispensable work to expand our understanding of the ways in which everyday building activities have been perceived and experienced in different cultures, from ancient times to our century and all over the world.

IMAJIbooks

Comparative Criticism addresses itself to the questions of literary theory and criticism. This new volume looks at the

Humanist Tradition in the Twentieth Century and articles will include: The Book in the Totalitarian Context; Lorenzo Valla and Changing Perceptions of Renaissance Humanism; Hitler's Berlin; Civilisation and barbarism: an anthropological approach; Walter Pater to Adrian Stokes: psychoanalysis and humanism; Art History and Humanist Tradition in the Stefan George Circle. The winning entries in the 1999-2000 BCLA/BCLT translation competition are also published.

FUTURE OF THE PAST The historical events in the early centuries of the Srivijaya kingdom that ruled over Malay Archipelago and the arrival of colonising nations afterwards are examples of the region's interlinked past. It forged a

historic root for cooperation within the countries in the region now under ASEAN. Consideration about the region's past record is what strongly tugged our editorial team's thoughts. History—or we could say the “past”—inevitably constructs the present and, consequently, our future. As we asked some of the people in the architectural practice regarding the role of the past , many hold that the past is an important aspect that we could learn from to live our present life. ARCHINESIA Bookgazine features built projects curated by our team. Among the projects, we look at the use of traditional building materials in Katamama Hotel by andramatin and the House in Cornwall Garden by CHANG Architects which belongs to a family of many generations. Can we take the past

as something that bounds us, or builds us? We leave it for the reader to decide.

The Stones of Venice, Volume 1 (of 3)
Prestel Publishing

Wood is a fresh, insightful and surprising look at the world's best timber

architecture. With 170 structures from the last 1,000 years, Wood features projects from some of the world's most celebrated architects. Renzo Piano's otherworldly New Caledonian Cultural Centre is found alongside projects from Tadao Ando and Peter Zumthor. Even the work of Le Corbusier, an architect best known for his work in concrete, is shown - his humble Mediterranean log cabin, Le Cabanon, was his last home. Arranged to promote comparison and discussion, the selected projects take the reader on a global tour of inspiring and intriguing structures: a Vietnamese village hall sits beside a state-of-the-art Belgian laboratory, an Italian anatomical theatre alongside a luxurious Canadian sauna and an onion-domed Russian church next to a fortified Japanese

castle. Illustrated with extraordinary photographs, each project includes an extended caption providing an insightful commentary on the building. An essay by the bestselling author and naturalist Richard Mabey explores the close relationship between trees and architecture. Following the popularity of *Concrete and Brick, Wood* is a beautiful and informative visual exploration of a natural material that harbours an extraordinary range of expression and potential and has inspired architects for generations.

 Study of Woods' visionary architecture which is concerned with the cultural

regeneration of society.

Notes and Queries Litres

Over the past 10-15 years a renaissance in wood architecture has occurred with the development of new wood building systems and design strategies, elevating wood from a predominantly single-family residential idiom to a rival of concrete and steel construction for a variety of building types, including high rises. This new solid wood architecture offers unparalleled environmental as well as construction and aesthetic benefits, and is of growing importance for professionals and academics involved in green design. Solid Wood provides the first detailed book which allows readers to understand new mass timber/massive wood architecture. It provides: historical context in wood architecture from

around the world a strong environmental rationale for the use of wood in buildings recent developments in contemporary fire safety and structural issues insights into building code challenges detailed case studies of new large-scale wood building systems on a country-by-country basis. Case studies from the UK, Norway, Sweden, Germany, Austria, Italy, Canada, the United States, New Zealand and Australia highlight design strategies, construction details and unique cultural attitudes in wood design. The case studies include the most ambitious academic, hospitality, industrial, multi-family, and wood office buildings in the world. With discussions from leading architectural, engineering, and material manufacturing firms in Europe, North America and the South

Pacific, Solid Wood disrupts preconceived notions and serves as an indispensable guide to twenty-first century wood architecture and its environmental and cultural benefits. Archinesia 09 Braun Publishing AG

The best of contemporary architectural design (TASCHEN's 25th anniversary special edition) The cr'eme de la cr'eme of the most influential architects and architectural firms'the definitive reference guide to contemporary architectural design. Here you'll find familiar names, such as O. Gehry, Meier, Ando, Foster, and Starck, as well as a host of brilliant future stars. Highlights include Jakob & MacFarlane's morphological George Restaurant at the Centre Georges Pompidou, Paris, Diller & Scofidio's "Blur Building" proposal for the

International Expo 2001 in Switzerland, and Herzog & De Meuron's remarkable Tate Modern. Arranged alphabetically by architect or firm, with biographical and contact information for designers and an extensive selection of photographs and illustrations, this volume presents the highlights of Architecture Now! Vol 1. Wood Architecture & Design Yale University Press

Wood has always been a strong contributing factor in the creation of interesting architecture. Because of its special physical characteristics, its many possibilities of application and combination with other construction materials, since human beings began building houses, wood has been one of the main building materials. In addition, because of the increasing sensitivity for

the protection of resources, the ecological potential of wood as a renewable raw material wood has gained in significance. To build with wood has been for years and is still a trend topic, this volume is a road tour of contemporary wood architecture. The many possibilities for use of this natural building material are shown with texts, photos, facts and drawings, as well as the innovative construction techniques which have extended these possibilities. The architectural species diversity

ranges from energy efficient passive homes to wide span supporting structures, to multi-story productions halls.
