Natural Capitalism Cambridge University Press

A comprehensive and accessible overview of the economic history of Latin America over the two centuries since Independence. It considers its principal problems and the main policy trends and covers external trade, economic growth, and inequality.

Essentials of Economics Harvard University Press

The Dynamics of International Business offers a comparative, chronological overview of the strategic and structural evolution of international firms. Organized around eras of global economic

development, the text synthesizes research on the internationalization of firms, highlighting crucial turning points in the evolution of the international economy. A particular emphasis is placed on the relationship between historical evidence and the theoretical frameworks available for its interpretation. Each period is illustrated by a selection of short case studies from a variety of industry sectors, including the Levant Company, Nestlé, Singer, Saint Gobain and NEC. An essential textbook for courses in business and economic history, this book will also be a valuable resource for scholars and students of international business more generally.

Accuracy, reliability, verifiable and error-free results - these are the goals that anyone involved in survey interviewing desires. A

practical guide to producing standardized - and reliable - interviews, this volume represents a blending of social science theories of interviewing dynamics, the authors' own extensive research on interview-related error and a compilation of research evidence from other prominent methodologists. How to avoid errors, sampling design issues, question construction methods, supervision techniques, training methods and the organization of data collection staffs are all thoroughly examined. In addition, prescriptions for improving the quality of survey data results are clear and concise. Both students learning survey research methods for the first time and experienced, active researchers will find this volume indispensable.

The question of why empires decline and fall has attracted the attention of historians for centuries, but remains fundamentally unsolved. This unique collection is concerned with the purely economic aspects of decline. It can be observed of empires in the process of decline that their economies are generally faltering. Here the similarities in different cases of economic decline are identified, bearing in mind that individual histories are characterized by important elements of originality. In his introduction, Professor Cipolla points out that improvements in standards of living brought about by a rising economy lead to more and more people demanding to share the benefits. Incomes increase and extravagances develop, as new needs begin to replace those which have been satisfied. Prosperity spreads to neighbouring countries, which may become a threat and force the empire into greater military expenditure. For these and other reasons, public consumption in mature empires has a tendency

to rise sharply and outstrip productivity and, in general, empires seem to resist change. The ten articles in this collection, first published in 1970, examine separate cases of economic decline, from Rome and Byzantium to the more recent histories of the Dutch and Chinese empires, and demonstrate both the resemblances and the peculiarly individual characteristics of each case.

Waste to Wealth Macmillan

'The book provides a good variety of articles capable of satisfying different readers regarding central banking.' - Eric Tymoigne, Journal of Economic Issues According to the New Consensus in monetary economics, monetarism is dead and central bankers target low inflation rates by acting upon short-term real rates of interest. Yet, this synthesis hinges on variants of the long-run vertical Phillips curve originally proposed by Milton Friedman, the father of old-line monetarism. Contributors to this volume question this New Consensus. While they agree that the money supply should be conceived as endogenous, they carefully examine the procedures pursued by central banks, the monetary policy transmission mechanisms suggested by central bankers themselves, and the assumptions imbedded in the New Consensus. They propose alternative analyses that clearly demonstrate the limits of modern central banking and point to the possible instability of monetary economies.

Against Intellectual Monopoly Kogan Page Publishers

There are no more respected voices in the environmental movement than these authors, true counselors on the direction of twenty-first-century business. With hundreds of thousands of books sold worldwide, they have set the agenda for rational, ecologically sound industrial development. In this inspiring book they define a superior & sustainable form of capitalism based on a system that radically raises the productivity of nature's dwindling resources. Natural Capitalism shows how cutting-edge businesses are increasing their earnings, boosting growth, reducing costs, enhancing competitiveness, & restoring the earth by harnessing a new design mentality. The authors offer dozens of examples of businesses that are making fourfold or even tenfold gains in efficiency, from self-heating & self-cooling buildings to 200-miles-per-gallon cars, while ensuring that workers aren't downsized out of their jobs. This practical blueprint shows how making resources more productive will create the next industrial revolution

The startling economic and political answers behind Europe's historical dominance Between 1492 and 1914, Europeans conquered 84 percent of the globe. But why did Europe establish global dominance, when for centuries the Chinese, Japanese, Ottomans, and South Asians were far more advanced? In *Why Did Europe Conquer the World?*, Philip Hoffman demonstrates that conventional explanations—such as geography, epidemic disease, and the Industrial Revolution—fail to provide answers. Arguing instead for the pivotal role of economic and political history, Hoffman shows that if certain variables had been different, Europe would have been eclipsed, and another power could have become master of the world. Hoffman sheds light on

the two millennia of economic, political, and historical changes that set European states on a distinctive path of development, military rivalry, and war. This resulted in astonishingly rapid growth in Europe's military sector, and produced an insurmountable lead in gunpowder technology. The consequences determined which states established colonial empires or ran the slave trade, and even which economies were the first to industrialize. Debunking traditional arguments, *Why Did Europe Conquer the World?* reveals the startling reasons behind Europe's historic global supremacy.

This updated edition of the text has been restructured into four parts: multiple regression model; single-equation regression models; revised exposition and a small macroeconomic model; and a revised treatment of time-series analysis.

An Inquiry Into the Nature and Causes of the Wealth of Nations Dell

"Intellectual property" - patents and copyrights - have become controversial. We witness teenagers being sued for "pirating" music - and we observe AIDS patients in Africa dying due to lack of ability to pay for drugs that are high priced to satisfy patent holders. Are patents and copyrights essential to thriving creation and innovation - do we need them so that we all may enjoy fine music and good health? Across time and space the resounding answer is: No. So-called intellectual property is in fact an "intellectual monopoly" that hinders rather than helps the competitive free market regime that has delivered wealth and innovation to our doorsteps. This book has broad coverage of both copyrights and patents and is designed for a general

audience, focusing on simple examples. The authors conclude that the only sensible policy to follow is to eliminate the patents and copyright systems as they currently exist.

Reframing Latin American Development Dogwise Publishing

Basándose en las obras de introducción a la economía Microeconomía / Macroeconomía de Paul Krugman y Robin Wells, Martha L. Olney preparó un texto para impartir cursos semestrales de introducción a la Economía. Su objetivo era el de obtener un texto ágil, ameno y adaptado al tiempo disponible y a las necesidades de cursos más breves. Fundamentos de Economía es el resultado de este esfuerzo. Para aprender los fundamentos de la Economía en sólo seis meses, los estudiantes necesitan suficientes ejemplos prácticos para comprender la aplicación de los conceptos, pero no deben abrumarse con demasiados detalles. Este manual incluye además una sección llamada "Encuentre la solución", constituida íntegramente por ejercicios numéricos resueltos que muestran eficazmente la aplicación de los principios teóricos planteados.

A manifesto for a radically different philosophy and practice of manufacture and environmentalism "Reduce, reuse, recycle" urge environmentalists; in other words, do more with less in order to minimize damage. But as this provocative, visionary book

argues, this approach perpetuates a one-way, "cradle to grave" manufacturing model that dates to the Industrial Revolution and casts off as much as 90 percent of the materials it uses as waste, much of it toxic. Why not challenge the notion that human industry must inevitably damage the natural world? In fact, why not take nature itself as our model? A tree produces thousands of blossoms in order to create another tree, yet we do not consider its abundance wasteful but safe, beautiful, and highly effective; hence, "waste equals food" is the first principle the book sets forth. Products might be designed so that, after their useful life, they provide nourishment for something new-either as "biological nutrients" that safely re-enter the environment or as "technical nutrients" that circulate within closed-loop industrial cycles, without being "downcycled" into low-grade uses (as most "recyclables" now are). Elaborating their principles from experience (re)designing everything from carpeting to corporate campuses, William McDonough and Michael Braungart make an exciting and viable case for change.
