Ultimate Speed Secrets St. Martin's Press
Personhood is considered at once a sign of legal-political status and of socio-cultural agency, synonymous with the rational individual, subject, or citizen. Yet, in an era of life-extending technologies, genetic engineering, corporate social responsibility, and smart technology, the definition of the person is neither benign

nor uncontested. Boundaries that previously worked to secure our place in the social order are blurring as never before. What does it mean, then, to be a person in the twenty-first century? In *Impersonations*, Sheryl N. Hamilton uses five different kinds of persons - corporations, women, clones, computers, and celebrities - to discuss the instability of the concept of personhood and to examine some of the ways in which broader social anxieties are expressed in these case studies. She suggests that our investment in personhood is greater now than it has been for years, and that our ongoing struggle to define the term is evident in law and popular culture. Using a cultural studies of law approach, the author examines important issues such as whether the person is a gender-neutral concept based on individual rights, the relationship between personhood and the body, and whether persons can be property. *Impersonations* is a highly original study that brings together legal, philosophical, and cultural expressions of personhood to enliven current debates about our place in the world.

Germany's economic miracle is a widely-known phenomenon, and the world-leading, innovative products and services associated with German companies are something that others seek to imitate. In *The 'Made in Germany' Champion Brands*, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size, performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is today. The book also focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and standards organizations, the fairs and exhibitions and all the social and cultural factors that influence, enhance and add positive value to the country's image. Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will learn something of the secrets of German success.

At hundreds of thousands of commercial, industrial, and military sites across the country, subsurface materials including groundwater are contaminated with chemical waste. The last decade has seen growing interest in using aggressive source remediation technologies to remove contaminants from the subsurface, but there is limited understanding of (1) the effectiveness of

these technologies and (2) the overall effect of mass removal on groundwater quality. This report reviews the suite of technologies available for source remediation and their ability to reach a variety of cleanup goals, from meeting regulatory standards for groundwater to reducing costs. The report proposes elements of a protocol for accomplishing source remediation that should enable project managers to decide whether and how to pursue source remediation at their sites.
