provide the arteries of modern society. The interaction of road, rail and other transport infrastructure with the ground is unusually intimate, and thus needs to be well-understood to provide economic and reliable infrastructure for society. Challenges include not only the design of new infrastructure (often on problematic ground), but inc

**A Report of an Investigation**

This book comprises select peer-reviewed papers presented at the International Conference on Sustainable Development through

Engineering Innovations (SDEI) 2020. It presents recent advances, new directions, and opportunities for sustainable and resilient approaches to design and protect the built-environment through engineering innovations & interventions. The topics covered are highly diverse and include all civil engineering and construction-related aspects such as construction

and environmental Issues, durability and survivability under extreme conditions, design of new materials for sustainability, eco-efficient and ultra-high performance cementitious materials, embedded structural and foundation systems and environmental geomechanics . The book will be of potential interest to the researchers

and students in the fields of civil engineering, architecture and sustainable development. Miscellaneous Publication - National Bureau of Standards *The American City* Variation in the Chemical Composition of Soils *Sustainable Development Through Engineering Innovations* **General**
