A revolutionary program of short burst, high-intensity exercise that uses your body's signals to curb hunger as it burns fat and builds muscle Over the last 26 years, thyroid pioneer Denis Wilson, MD, has trained thousands of physicians on the crucial relationships between the thyroid system, metabolism, and body temperature. He's heard patients recount their inability to get fit using conventional approaches, and he's understood their frustration. Based on the latest medical research, Dr. Wilson has created fastercise, a revolutionary practice that uses brief, strategically timed bursts

By combining simple analogies and clear explanations of the physiology of the body's energy pathways and response to food and exercise, Dr. Wilson reveals how conventional approaches to dieting and weight management can actually fight against the body's priorities and lead to frustration and poor results. Fastercise is a time-efficient, convenient, and natural approach powerfully signals the body to burn fat and build muscle synergistically, leading to surprisingly beneficial and quick results. The Power of Fastercise explains how fastercise can help you:

- Burn fat without going hungry

Each year, Americans consume hundreds of food products that contain truly dangerous compounds, including heavy metals, pesticides, and other harmful additives—with the blessing of the FDA. Why is this happening and why haven't you heard about it? In *Unsafe at Any Meal*, Dr. Renee Dufault, former food investigator for the Food and Drug Administration, provides the startling answers. While at the FDA, Dr. Dufault discovered that mercury—a highly toxic metal—was contaminating the plumbing systems of many food manufacturing plants. Upon further examination, she discovered that the same mercury was also evident in a number of processed foods commonly sold in supermarkets. When Dr. Dufault revealed these disturbing findings to her superiors, she was told to stop her investigation. Her continued efforts to raise the issue always met with a dead end, so she chose to take an early retirement from the FDA. Dr. Dufault then devoted her energy to making the public aware of the insidious dangers that contaminate our food. In 2010, she founded an organization of scientists to study the scope of this problem and has published numerous research articles on the topic with little fanfare. To expose what still seems to be a well-kept secret by the FDA, she has written *Unsafe at Any Meal* to provide consumers with the information they need to know. The book begins with the author's story leading up to the creation of this work. It then describes the various toxic substances that are most commonly found in our food supply, and explains how they affect your genes, health, and the surrounding environment. After examining the Standard American Diet, which is sorely lacking in disease-preventing nutrients, it discusses the country's trend toward consuming a skyrocketing amount of ingredients that can contain heavy metals. It further shows how exposure to these heavy metals can contribute to conditions such as ADHD or autism. Also included is a helpful guide to reading food labels, recognizing misleading marketing tactics, and knowing what to look for—and what to look out for—in the aisles of your grocery store. Over fifty years ago, Rachel Carson's book *Silent Spring* exposed the dangers of DDT in our food supply. Unfortunately, it seems that the problem of food contamination has actually become worse. Backed by research and first-hand experience, Dr. Dufault reveals how the FDA has failed us, and outlines how you can protect yourself and your family by knowing what to avoid and by filling your kitchen with food that is clear of toxins.

Identify the possibility of hypothyroidism when the patient's symptoms include fatigue, constipation, feeling cold, impaired memory and slow heart rate. The disease is common and its symptoms may be vague. Diagnosis of hypothyroidism and treatment of hypothyroidism originating in the thyroid gland (primary hypothyroidism) are tasks of the primary health care. Hypothyroidism is easy to confirm or exclude by determining serum TSH and free T4 (FT4) concentrations. Remember that hypothyroidism can be the cause of high serum cholesterol or creatine kinase (CK) concentrations. In replacement therapy, a young or middle-aged patient usually feels best if TSH concentration is about 1–2 mU/l and FT4 concentration is close to the upper limit of the reference range. Elderly patients with e.g. angina pectoris or arrhythmias often are more susceptible to the effects of thyroxine. In them, the maintenance dose remains slightly lower and TSH concentration respectively a little higher. Ultrasonography has no role in the investigation of hypothyroidism (unless it is indicated by the findings on palpation). Thyroxine should not be used for the treatment of e.g. depression, low energy level or overweight in a person who is biochemically euthyroid.

\*\*\* NEW YORK TIMES BESTSELLER \*\*\* What do obesity, insulin resistance, diabetes, fatty liver disease, hypertension, cardiovascular disease, stroke,

neurological disorders and premature death have in common? All can be stoked by high uric acid levels. Our most respected scientific literature is bursting with evidence that elevated uric acid levels lie at the root of many pervasive health conditions, but mainstream medicine for the most part remains unaware of this connection. This is especially alarming because many people don't know they are suffering from sky-high levels, putting them at risk for developing or exacerbating potentially life-threatening illnesses. Offering an engaging blend of science and practical advice, *Drop Acid* exposes the deadly truth about uric acid and teaches invaluable strategies to manage its levels, including: - Simple dietary edits focused on reducing fructose and foods high in 'purines' that can raise uric acid. - Natural hacks that lower levels such as consuming tart cherries, vitamin C, quercetin, and coffee. - Identifying common pharmaceuticals that threaten to increase uric acid. - Lifestyle interventions, like restorative sleep and exercise. - How to easily test your uric acid levels at home - a test routinely performed in your doctor's office during regular check-ups but typically ignored. Featuring the ground-breaking 'LUV' (Lower Uric Values) diet, 35 delicious recipes, self-assessment quizzes and a 21 day program for dropping levels, *Drop Acid* empowers readers with the information they need to address this hidden danger and live longer, leaner and healthier lives.

A guide to understanding hypothyroidism for those who suspect they have low thyroid hormone levels and patients who have just been diagnosed and are beginning treatment as well as those who are on treatment already, but are still feeling ill.

*The Metabolic Approach to Cancer* Elephant in the Room Books

Why do so many diets lead to more weight gain? Do more active people have faster metabolisms? Is exercise essential for weight loss? Over the past twenty years, evolutionary biologist Herman Ponzter has conducted ground-breaking studies across a range of settings, including pioneering fieldwork and Hadza hunter-gatherers in northern Tanzania. This book draws on his eye-opening research to show how, contrary to received wisdom, exercise does not increase our metabolism. Instead, we burn calories within a very narrow range- nearly 3,000 calories per day, no matter our activity level. By taking a closer look at what happens to the energy we consume, Ponzter explores the ways in which metabolism controls every aspect of our health - from fertility to immune function - and reveals the truth about the dynamic systems that sustains us. Filled with facts and memorable anecdotes, *Burn* will change the way you think about food, exercise and life.

*The Power of Fastercise* Grand Central Publishing

For fifty years, the medical establishment has preached the same rules for losing weight: restrict calories, eat less, and exercise more. Yet in that time, obesity in the United States has skyrocketed. So why has this prescription so clearly failed? Based on twenty years of investigative reporting and interviews with more than a hundred practicing physicians who embrace ketogenic (low-carbohydrate, high-fat) eating as the best formula for health, here bestselling author Gary Taubes puts the keto movement in the necessary historical and scientific perspective. He makes clear the vital misconceptions about obesity and diet (no, people do not become fat simply by eating too much or being sedentary; hormones play the critical role) and uses collected clinical experience from the medical community to provide much-needed practical advice on healthy eating. A groundbreaking manifesto for the fight against obesity and diabetes, in *The Case for Keto*, Taubes reveals why the established rules about eating healthfully might be the wrong approach to weight loss for most people, and how ketogenic diets can help many of us achieve and maintain a healthy weight for life.

"Why Low Carb Should Be the Default Approach for Managing and Preventing Metabolic Syndrome and Other Chronic Diseases. Almost every day it seems a new study is published that shows you are at risk for diabetes, cardiovascular disease, or all-cause mortality due to something you've just eaten for lunch. Many of us no longer know what to eat or who to believe. In the Nutrition Revolution; distinguished biochemist Richard Feinman, PhD, cuts through the noise, explaining the intricacies of nutrition and human metabolism in accessible terms. He lays out the tools you need to navigate the current confusion in the medical literature and its increasingly bizarre reflection in the media. At the same time, The Nutrition Revolution offers an unsparing critique of the nutritional establishment, which continues to demonize fat and refute the benefits of low-carbohydrate and ketogenic diets, all despite decades of evidence to the contrary. Feinman tells the story of the first low-carbohydrate revolution fifteen years ago, how it began, what killed it, and why a second revolution is now reaching a fever pitch. He exposes the backhanded tactics of a regressive nutritional establishment that ignores good data and common sense, and highlights the innovative work of those researchers who have broken rank. Entertaining, informative, and irreverent, Feinman paints a broad picture of the nutrition world: the beauty of the underlying biochemistry; the embarrassing failures of the medical establishment; the preeminence of low-carbohydrate diets for weight loss, diabetes, other metabolic diseases,

and even cancer; and what's wrong with the constant reports that common foods represent a threat rather than a source of pleasure."--

**The De-Stress Effect** HarperCollins

End chronic pain—for good—with this practical guide from the PBS personality behind Classical Stretch and author of the New York Times bestseller *Aging Backwards*. Chronic pain is the most common cause of long-term disability in the United States. Twenty percent of American adults accept back spasms, throbbing joints, arthritis aches, and other physical pain as an inevitable consequence of aging, illness, or injury. But the human body is not meant to endure chronic pain. Miranda Esmonde-White has spent decades helping professional athletes, ballet dancers, and Olympians overcome potentially career-ending injuries and guiding MS patients and cancer survivors toward pain-free mobility. Now, in *Forever Painless*, she shows everyone how to heal their aching bodies and live pain free. The root of nearly all pain is movement—or lack thereof. We need to move our bodies to refresh, nourish, and revitalize our cells. Without physical activity, our cells become stagnant and decay, accelerating the aging process and causing pain. People who suffer chronic pain often become sedentary, afraid that movement and activity will make things worse, when just the opposite is true: movement is essential to healing. In *Forever Painless*, Miranda provides detailed instructions for gentle exercise designed to ease discomfort in the feet and ankles, knees, hips, back, and neck—allowing anyone to live happier, healthier, and pain-free no matter their age.
