FITZPATRICK WATTS

9th International Symposium, PETS 2009, Seattle, WA, USA, August 5-7, 2009, Proceedings Cambridge University Press

This book encapsulates a line of research that looks at how students are positioned as ethical actors/decision makers in biology education by science policy, curriculum, and classroom resources. Its basis comes from a textbook study that examined how biology texts work to constitute subjectivities related to neoliberalism and global capitalism, sex/gender and sexuality, and ethics. The study found that textbook discourses set limits on a) the types of ethical concerns represented b) the modes of ethical engagement c) the dispositions necessary to engage in ethical action or decision-making. Policy reform, regulation, and personal lifestyle choices were the primary ways students could approach ethical decision-making or action. While these approaches are useful, they are likely not sufficient for dealing with major twenty first century problems such as climate change and social inequality, along with new ethical dimensions introduced by biotechnologies and genomic research. This research brief sets a context for how discourses of science education policy and curricula work to shape a 'subject of ethics', that is how students come to see themselves as participants in issues of ethical concern. Drawing from a structural-poststructural philosophical approach, Science and Technology Studies, educational research, and a methodology based on discourse analysis and ethnography, this book's overall goal is to assist with research into subjectivity, ethics, politics, policy, and socioscientific issues in science education.

One of the most important and consistent voices in the reform of science education over the last thirty years has been that of Peter Fensham. His vision of a democratic and socially responsible science education for all has inspired change in schools and colleges throughout the world. Often moving against the tide,

Fensham travelled the world to promote his radical ideology. He was appointed Australia's first Professor of Science Education, and was later made a Member of the Order of Australia in recognition of his work in this new and emerging field of study. In this unique book, leading science educators from around the world examine and discuss Fensham's key ideas. Each describes how his arguments, proposals and recommendations have affected their own practice, and extend and modify his message in light of current issues and trends in science education. The result is a vision for the future of science teaching internationally. Academics, researchers and practitioners in science education around the world will find this book a fascinating insight into the life and work of one of the foremost pioneers in science education. The book will also make inspiring reading for postgraduate students of science education.

A Vision for Science Education University of Ottawa Press Sustainable Communities, Sustainable Environments? What is enacted when we engage with these ideas? This book provides a variety of international perspectives from the traditional fields of science and technology education as teachers (primary through tertiary), teacher educators, and academic researchers engage with this topic.

On Science 10 McGraw-Hill Ryerson

No longer dismissed as "escapist" reading, critics have finally discovered a brave new world of science fiction and fantasy literature. This book is a long-overdue tribute to this previously ignored genre, placing these works within a general context of Canadian literature and culture.

Multiculturalism and the Canadian Constitution Duke University Press

An introduction to the four simplest types of chemical reactions, this unit begins with decomposition and synthesis reactions and moves to the reactions of acids and bases. The relationship between atomic structure, chemical behavior, and organization of the periodic table is extended from the Grade Nine Chemistry unit. The unit is composed of three major sections.

1.Decomposition and synthesis reactions, with their one-to-many and many-to-one structure, are the easiest to work with. Within this context, students will learn how to represent chemical change four different, parallel ways: diagrams, symbolic balanced equations, word equations, and mass equations. We clearly intend this unit to anticipate and support the introduction of the mole concept in Grade 11. 2.Metals, non-metals and pH. The origins of acid and base behaviour are probed here. These reactions

exemplify single displacement reactions. 3.Reactions of Acids and Bases. In both metal / acid reactions and acid / base reactions, we continue to use the four representations. These reactions exemplify the double displacement reaction type. Emphasis is placed on naming the chemicals involved. At the end of each section is a thorough quiz.

Chemistry: The Molecular Nature of Matter and Change by Martin Silberberg has become a favorite among faculty and students. Silberberg's 4th edition contains features that make it the most comprehensive and relevant text for any student enrolled in General Chemistry. The text contains unprecedented macroscopic to microscopic molecular illustrations, consistent step-by-step worked exercises in every chapter, an extensive range of end-of-chapter problems which provide engaging applications covering a wide variety of freshman interests, including engineering, medicine, materials, and environmental studies. All of these qualities make Chemistry: The Molecular Nature of Matter and Change the centerpiece for any General Chemistry course.

Subversive Itinerary UBC Press

CRYSTAL—Alberta was established to research ways to improve students' understanding and reasoning in science and mathematics. To accomplish this goal, faculty members in Education, Science, and Engineering, as well as school teachers joined forces to produce a resource bank of innovative and tested instructional materials that are transforming teaching in the K-12 classroom. Many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the West Nile virus. Combined with an emphasis on the use of visualizations, the instructional materials improve students' engagement with science and mathematics. Participation in the CRYSTAL—Alberta project has changed the way I think about the connection between what I do as a researcher and what I do as a teacher: I have learned how to better translate scientific knowledge into language and activities appropriate for students, thereby transforming my own teaching. I also have learned to make better connections between what students are learning and what is happening in their lives and the world, thereby increasing students' interest in the subject and enriching their learning experience.

The Crisis Years : Essays in Honor of Richard A. Preston University of Toronto Press

Together, the strands of Canada's diversity tell a complex story of pluralism, consolidated through a long and incremental period of constitution-building. This book brings together scholars of cultural diversity to address key components of the changing Canadian story: the evolution over time of multiculturalism within

Canadian constitutional law and policy; the territorial dimension of Canadian federalism; and the role of constitutional interpretation by the courts in the development of Canada as a multicultural state. The essays illustrate how deeply multiculturalism is woven into the fabric of the Canadian constitution and the everyday lives of Canadians.

Sustainable Communities, Sustainable Environments

Springer Science & Business Media

This volume examines 150 years of Canadian political life in light of one of the country's most intractable problems, its cultural identity. Although many thoughtful Canadians remain dubious about the existence of a truly Canadian way of life, Douglas Verney argues that in fact Canada's political traditions embody and reflect a unique culture; and that although the Canadian government has been the primary instrument for nurturing this culture, it has been at the same time the entity most guilty of obscuring and ignoring it.

This book addresses political legitimacy and system support in one democracy, Canada.

Science Links 10 [Whitby, Ont.] : McGraw-Hill Ryerson

All governments require popular support, and in democracies this support must be maintained by noncoercive means. This book analyzes the question of political support in Canada, a country in which the maintenance of the integrity of the political community has been and continues to be, in the words of the editors, "the single most salient aspect of the country's political life." The nature of popular support is first considered in broad, theoretical terms, then from the standpoint of those agents most responsible for maintaining support in Canadian democracy, then as influenced by particular issues and policies, and finally as it affects and is affected by the separatist movement in Quebec.

Durham : Duke University Press

Subversive Itinerary investigates the theoretical evolution of the influential political theorist Gad Horowitz, as well as the historical impact of his ideas on Canadian life and letters. Bringing together dynamic new works by both established and emerging scholars, along with three new articles by Horowitz himself, this volume examines the concepts he developed and extends his approach beyond the current historical moment. The book includes a

history of Horowitz's engagements as a public intellectual through appraisals of his early, mid, and late-career contributions, from the sixties to the present day. Along the way, the contributors present innovative new work in Canadian political thought, continental theory, Jewish philosophy, Buddhism, and radical general semantics. *Subversive Itinerary* demonstrates how Horowitz's itinerary delivers invaluable tools for understanding issues of critical importance today.

Student Resource BRILL

This book constitutes the refereed proceedings of the 9th International Symposium on Privacy Enhancing Technologies, PETS 2009, held in Seattle, WA, USA, in August 2009. The 14 revised full papers presented were carefully reviewed and selected from 44 initial submissions. The papers - both from academia and industry - cover design and realization of privacy services for the internet and other communication networks and present novel research on all theoretical and practical aspects of privacy technologies, as well as experimental studies of fielded systems.
