Floyd: MCQ in Bipolar Junction Transistor Amplifiers ...Beta is sometimes referred to as β_{FE} which is the transistors forward current gain in the common emitter configuration. Beta has no units as it is a fixed ratio of the two currents, I_c and I_b so a small change in the Base current will cause a large change in the Collector current. One final point about Beta. Transistors of the same type and part number will have large variations in their Beta ...Common Emitter Amplifier and Transistor Amplifiers Objective: A bipolar junction transistor (BJT) can be used in many circuit configurations such as an amplifier, oscillator, filter, rectifier or just used as an on-off switch.
