International Geophysics
Series, Volume 2: Physics
of the Aurora and Airglow
explores certain physical
aspects of aurora and
airglow. This volume is
composed of 13 chapters
and begins with surveys
of the theory and
spectroscopic and
photometric analyses of
radiation from the upper
atmosphere. The
subsequent chapters treat
the geographic
distribution of aurora and
its physical processes in
the atmosphere. Other
chapters examine the
theory of hydrogen
emission in aurora,
resonance scattering by
atmospheric sodium, the
excitation of the oxygen
red lines in the airglow,
and an atlas of the auroral
spectrum. A chapter
focuses on the analysis of
twilight observations for
emission heights. The
concluding chapters
discuss the theory of day
airglow, as well as the
spectral photometry and
excitation of the

nightglow. This book is of
value to geophysicists,
theoreticians, and
scientists of the allied
fields of geophysics.

In a pioneering
exploration of the
intellectual and literary
exchange between
Russian émigrés and
French intelligentsia in
the 1920s and 1930s,
Leonid Livak provides an
impressively
comprehensive
bibliographic overview of
a veritable "who's who" of
Russian intellectuals and
literati, listing all the
material published by
Russian émigrés or on
topics pertaining to them
during the period under
study. Focusing attention
on a largely ignored
chapter of European
cultural history, this
volume challenges

historical assumptions by
demonstrating processes
of cultural cross-
fertilization and
illuminates the
precedents Russians set
for political exiles in the
twentieth century. A
remarkable achievement
in scholarship, Russian
Émigrés in the Intellectual
and Literary Life of Inter-
War France is a valuable
resource for admirers and
researchers of French and
Russian culture and
European intellectual
history.

The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

Venetian music print culture of the mid-sixteenth century is presented here through a study of the Scotto press, one of the foremost dynastic music publishers of the Renaissance. For over a century, the house of Scotto played a pivotal role in the international book trade, publishing in a variety of fields including philosophy, medicine, religion, and

music. This book examines the mercantile activities of the firm through both a historical study, which illuminates the wide world of the Venetian music printing industry, and a catalog, which details the music editions brought out by the firm during its most productive period. A valuable reference work, this book not only enhances our understanding of the socioeconomic and cultural history of Renaissance Venice, it also helps to preserve our knowledge of a vast musical repertory.

Spectroscopic Data Relative to Diatomic Molecules provides information pertinent to the electronic spectrum and spectroscopic properties of diatomic molecules. This book consists of a collection of tables that mainly deal with electronic spectra located in the infrared, the visible and the ultraviolet.

Thermochemical data have been used in this book to make estimates of dissociation energies while results from electron diffraction experiments have been used to determine internuclear distances. This text provides information regarding potential energy curves, ionization potential, correlations with atomic states, electronic configuration, lifetimes, transition probabilities, astrophysical applications, and chemical physics. This book is a valuable resource for spectroscopists.

For advanced undergraduate and beginning graduate students in atmospheric, oceanic, and climate science, Atmosphere, Ocean and Climate Dynamics is an introductory textbook on the circulations of the atmosphere and ocean and their interaction, with an emphasis on global scales. It will give students a good grasp of what the atmosphere and oceans look like on the large-scale and why they look that way. The role of the oceans in climate and paleoclimate is also discussed. The combination of observations, theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography. * Written at a mathematical level that is appealing for undergraduates and beginning graduate students * Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web * Contains instructions on how to reproduce the simple but informative laboratory

experiments * Includes copious problems (with sample answers) to help students learn the material.
