 Readings in Gender in Africa collects the most important critical and theoretical writings on how gender issues have transformed contemporary views of Africa. Scholarship from North America, Europe, and Africa is represented in this comprehensive volume. A synthetic introduction by Andrea Cornwall discusses efforts to include women in research about Africa. The volume not only shows how gender relations have been constructed on the African continent but reflects the changes in approach and inquiry that have been brought about as scholars consider gender identities and difference in their work. Specific themes covered here include the contestation and representation of gender, femininity and masculinity, livelihoods and lifeways, gender and religion, gender and culture, and gender and governance. Readers from across the landscape of African studies will find this

an essential sourcebook. Published in association with the International African Institute, London

Using forty-five interviews with former members and sympathisers, this book traces the development of the Women's section of the Franco government from its roots in the Spanish fascist party to its role in the dictatorship up to 1959. The study reveals that despite its anti-feminist agenda, the section was, in some areas, a catalyst for women's emancipation in post-Franco Spain.

Modernizing Tradition New Saraswati House India Pvt Ltd

In the turbulent decades after World War I, both France and Germany sought to return to an idealized, prewar past. Many people believed they could recapture a sense of order and stability by reinstating traditional gender roles, which the war had thrown off balance. While French and German women necessarily filled men's roles in factories and other jobs during the war, those who continued to lead active working lives after World War I risked being called "modern women." Far from a compliment, this derogatory label encompassed everything society found threatening about women's new place in public life: smoking, working women who preferred independence and sexual freedom to a traditional role in the home. Society felt threatened by the image of the "modern woman," yet also realized that conceptions of femininity needed to accommodate the cultural changes brought about by the Great War. In *Modernizing Tradition*, Adam C. Stanley explores how interwar French and German popular culture used commercial images to redefine femininity in a way that granted women some access to modern life without encouraging the assertion of female independence. Examining advertisements, articles, and cartoons, as well as department store publicity materials from the popular press of each nation, Stanley reveals how the media attempted to convince women that--with the help of newly available consumer goods such as washing machines, refrigerators, and vacuum cleaners--being a mother or a housewife could be empowering, even liberating. A life devoted to the home, these images promised, need not be an unmitigated return to old-fashioned tradition but could offer a rewarding lifestyle based on the wonders and benefits of modern technology. Stanley shows that the media carefully limited women's association with modernity to those activities that reinforced women's traditional roles or highlighted their continued dependence on masculine guidance, expertise, and authority. In this cross-national study, Stanley brings into sharp relief issues of gender and consumerism and reveals that, despite the larger political differences between France and Germany, gender ideals in the two countries remained virtually identical between the world wars. That these concepts of gender stayed static over the course of two decades--years when nearly every other aspect of society and culture seemed to be in constant flux--attests to their extraordinary

power as a force in French and German society.

This book explores grammatical gender in the Romance languages and dialects and its evolution from Latin. Michele Loporcaro investigates the significant diversity found in the Romance varieties in this regard; he draws on data from the Middle Ages to the present from all the Romance languages and dialects, discussing examples from Romanian to Portuguese and crucially also focusing on less widely-studied varieties such as Sursilvan, Neapolitan, and Asturian. The investigation first reveals that several varieties display more complex systems than the binary masculine/feminine contrast familiar from modern French or Italian. Moreover, it emerges that traditional accounts, whereby neuter gender was lost in the spoken Latin of the late Empire, cannot be correct: instead, the neuter gender underwent a range of different transformations from Late Latin onwards, which are responsible for the different systems that can be observed today across the Romance languages. The volume provides a detailed description of many of these systems, which in turns reveals a wealth of fascinating data, such as varieties where 'husbands' are feminine and others where 'wives' are masculine; dialects in which nouns overtly mark gender, but only in certain syntactic contexts; and one Romance variety (Asturian) in which it appears that grammatical gender has split into two concurrent systems. The volume will appeal to linguists from a range of backgrounds, including Romance linguistics, historical linguistics, typology, and morphosyntax, and is also of relevance to those working in sociology, gender studies, and psychology.

Gender inequality remains an issue of high relevance, and controversy, in society. Previous research shows that language contributes to gender inequality in various ways: Gender-related information is transmitted through formal and semantic features of language, such as the grammatical category of gender, through gender-related connotations of role names (e.g., manager, secretary), and through customs of denoting social groups with derogatory vs. neutral names. Both as a formal system and as a means of communication, language passively reflects culture-specific social conditions. In active use it can also be used to express and, potentially, perpetuate those conditions. The questions addressed in the contributions to this *Frontiers* Special Topic include: • how languages shape the cognitive representations of gender • how features of languages

correspond with gender equality in different societies • how language contributes to social behaviour towards the sexes • how gender equality can be promoted through strategies for gender-fair language use These questions are explored both developmentally (across the life span from childhood to old age) and in adults. The contributions present work conducted across a wide range of languages, including some studies that make cross-linguistic comparisons. Among the contributors are both cognitive and social psychologists and linguists, all with an excellent research standing. The studies employ a wide range of empirical methods: from surveys to electro-physiology. The papers in the Special Topic present a wide range of complimentary studies, which will make a substantial contribution to understanding in this important area.

Some have argued that more men should play a role in ending violence against women – but what do we know about those men who are already doing so? Using case studies from Spain, Sweden and the UK, this book highlights those men who are already taking action. Examining the social, cultural, political and economic factors that support men to take a public stance, the authors explore what we can learn from their experiences in order to help build the movement to end violence against women. This important study will inform scholars and students of sociology and gender studies, as well as social movements and organisations working to involve and engage men and boys in achieving gender equality.

The announcement that we had decoded the human genome in 2000 ushered in a new and unique era in biomedical research and clinical medicine. This Third Edition of Principles of Gender-Specific Medicine focuses, as in the past two editions, on the essentials of sexual dimorphism in human physiology and pathophysiology, but emphasizes the latest information about molecular biology and genomic science in a variety of disciplines. Thus, this edition is a departure from the previous two; the editor solicited individual manuscripts from innovative scientists in a variety of fields rather than the traditional arrangement of sections devoted to the various subspecialties of medicine edited by section chiefs. Wherever it was available, these authors incorporated the latest information about the impact of the genome and the elements that modify its expression on human physiology and illness. All chapters progress translationally from basic science to the clinical applications of gender-specific therapy and suggest the most important topics for future investigation. This book is essential reading for all biomedical investigators and medical educators involved in gender-specific medicine. It will also be useful for primary care practitioners who

need information about the importance of sex and gender in the prevention, diagnosis and treatment of illness. Outlines sex-specific differences in normal human function and explains the impact of age, hormones, and environment on the incidence and outcome of illness. Reflects the latest information about the molecular basis of the sexual dimorphism in human physiology and the experience of disease. Reviews the implications of our ever-improving ability to describe the genetic basis of vulnerability to disease and our capacity to alter the genome itself. Illustrates the importance of new NIH guidelines that urge the inclusion of sex as a variable in research protocols. Land, Women, Youths, and Land Tools or Methods Routledge Colwell, the first female director of the National Science Foundation, discusses the entrenched sexism in science, the elaborate detours women have taken to bypass the problem, and how to fix the system. When she first applied for a graduate fellowship in bacteriology, she was told, "We don't waste fellowships on women." Over her six decades in science, as she encounters other women pushing back against the status quo, Colwell also witnessed the advances that could be made when men and women worked together. Here she offers an astute diagnosis of how to fix the problem of sexism in science-- and a celebration of the women pushing back. --
