Complex mathematical and computational models are used in all areas of society and technology and yet model based science is increasingly contested or refuted, especially when models are applied to controversial themes in domains such as health, the environment or the economy. More stringent standards of proofs are demanded from model-based numbers, especially when these numbers represent potential financial losses, threats to human health or the state of the environment. Quantitative sensitivity analysis is generally agreed to be one such standard. Mathematical models are good at mapping assumptions into inferences. A modeller makes assumptions about laws pertaining to the system, about its status and a plethora of other, often arcane, system variables and internal model settings. To what extent can we rely on the model-based inference when most of these assumptions are fraught with uncertainties? *Global Sensitivity Analysis* offers

an accessible treatment of such problems via quantitative sensitivity analysis, beginning with the first principles and guiding the reader through the full range of recommended practices with a rich set of solved exercises. The text explains the motivation for sensitivity analysis, reviews the required statistical concepts, and provides a guide to potential applications. The book: Provides a self-contained treatment of the subject, allowing readers to learn and practice global sensitivity analysis without further materials. Presents ways to frame the analysis, interpret its results, and avoid potential pitfalls. Features numerous exercises and solved problems to help illustrate the applications. Is authored by leading sensitivity analysis practitioners, combining a range of disciplinary backgrounds. Postgraduate students and practitioners in a wide range of subjects, including statistics, mathematics, engineering, physics, chemistry, environmental sciences, biology, toxicology, actuarial sciences, and econometrics will find

much of use here. This book will prove equally valuable to engineers working on risk analysis and to financial analysts concerned with pricing and hedging.

The Magic of Chess Tactics 2

Russell Enterprises, Inc.

In chess the Caro-Kann opening is one of Black's most reliable answers to 1.e4. It is a regular favorite of elite players, who know that computer-aided preparation now threatens the sharpest lines of the Sicilian or Ruy Lopez (at the very least with a forced draw). The Caro-Kann is less susceptible to such forcing lines - Black sets out to equalize in the opening, and win the game later. Grandmaster Lars Schandorff reveals a bulletproof chess opening repertoire and lucidly explains how Black should play the middlegame and endgame.

Chess Lessons Jhg Partners

This is a thoroughly revised and updated edition of KEITH SPENCE's essential guide to two of the most beautiful - and often still unspoiled - counties in England, which on its first publication quickly established itself as the best available guide to

the area. Mr Spence shows how much as yet survives and how rich, varied and fascinating this part of England still is. He writes sensitively and knowledgeably about buildings and architecture, and has a keen sense of the detail that gives identity to a place. There is much to be learned from this book, which maintains the high standard of the Companion Guide series.

Strike Like Judit! MIT Press
Written as a sequel to *The Agricultural Tractor 1855-1950* by R. B. Gray and *Farm Tractors 1950-1975* by Lester Larson, each chapter lists most of the new tractors introduced for that year, a summary of the specifications for the models, and information about the companies manufacturing the tractors.

What Am I Bid? John Wiley & Sons

Judit Polgar is the strongest female chess player of all time. From an early age on the Hungarian prodigy baffled the world with her sensational triumphs. At the age of 15 she beat Bobby Fischer's record to become the youngest grandmaster in history. During her glorious

career, which she ended in 2014, she defeated World Champions Boris Spassky, Anatoly Karpov, Garry Kasparov, Vishy Anand and Magnus Carlsen. To reach the 8th spot in the FIDE World Rankings (for men) and belong to the very best for many years, as Judit Polgar did, you obviously have to be a brilliant all-round chess player. Still, she will be first and foremost remembered for her attacking skills. Her electrifying combinations and tactical triumphs set her apart. As former U.S. Champion Joel Benjamin said after he lost to her: "She is a tiger at the chessboard. She absolutely has a killer instinct." Award-winning author Charles Hertan has revisited the gold mine of Judit Polgar's games and selected her best and most instructive tactics. They are arranged by theme and presented with helpful explanations and lots of practical advice. You will be inspired by her clever traps, stunning sacrifices and cunning endgame tricks. You will learn from her tactical vision, calculating skills and counter-intuitive ideas. *Strike Like Judit* is a riveting guide that will help you win more games as you will find killer

moves more easily and more quickly.

Philip Wilson Publishers, Limited

The latest edition of the essential text and professional reference, with substantial new material on such topics as vEB trees, multithreaded algorithms, dynamic programming, and edge-based flow. Some books on algorithms are rigorous but incomplete; others cover masses of material but lack rigor.

Introduction to Algorithms uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study. The algorithms are described in English and in a pseudocode designed to be readable by anyone who has done a little programming. The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor. The first edition became a widely used text in universities worldwide as well as the standard reference for professionals. The second edition featured new

chapters on the role of algorithms, probabilistic analysis and randomized algorithms, and linear programming. The third edition has been revised and updated throughout. It includes two completely new chapters, on van Emde Boas trees and multithreaded algorithms, substantial additions to the chapter on recurrence (now called “Divide-and-Conquer”), and an appendix on matrices. It features improved treatment of dynamic programming and greedy algorithms and a new notion of edge-based flow in the material on flow networks. Many exercises and problems have been added for this edition. The international paperback edition is no longer available; the hardcover is available worldwide.

The Companion Guide to Kent and Sussex A & S Galloway P/L

The Caro-Kann is one of the most important and popular responses to 1.e4. World champions Botvinnik, Petrosian, Karpov and Anand have played this reliable chess opening in many of their games. Present-day elite players such as Hikaru Nakamura and Fabiano Caruana are proving that the ‘drawish’ reputation of the Caro-Kann no longer

holds in modern chess. Victor Bologan presents a complete Caro-Kann repertoire for Black that is much more than just a lucidly explained and highly playable set of responses. In many lines Bologan provides – as he has done in his other recent major chess opening books for New In Chess – two options to handle the Black position. Bologan’s explanations are accessible for a wide range of players and he provides the reader with a thorough grounding in the strategic and tactical motifs. During his research, Bologan has found many new ideas and resources. After reading and studying this book you are bound win many exciting games with Bologan’s Caro-Kann!

The Chemistry of Superheavy Elements
Franklin Classics

The first general-purpose tractor with narrowly spaced front wheels, the original Farmall was designed to do fine-tuned field cultivation as well as anything a team of farm horses could do—in short, to “farm all.” The rest is history, even legend, in the agriculture industry—a legend that unfolds in these pages in full color and sharp detail. This big book features five hundred photographs of Farmall tractors, from that first experimental model introduced in 1924, through the classic lineup of International Harvester models that bore the Farmall name, to the last one to roll off the assembly line (the landmark five-millionth tractor produced at the Farmall plant in Illinois). Detailed descriptions combine with these vibrant pictures to make Legendary Farmall Tractors a full-scale appreciation of the art of

farm machinery at its can-do best.

Babel McFarland

"Success is a collection of problems solved." – I.M. Pei, Architect In this, his penultimate work, legendary chess instructor Mark Dvoretsky (1947-2016) explores identifying and dealing with problems on the chessboard. "While working on the games that I have included in this book, I have sought to uncover their core ideas which are important for a chessplayer's improvement and demonstrate them as vividly as possible. Those may include both approaches to playing out certain typical situations and mastering various positional and tactical ideas, as well as improving technical skills and training an ability to search for decisions and to make them on the basis of the precise calculation of variations. "The last two parts of the book are devoted to the specific forms of training that I routinely use during my lessons: analysis of games in the form of solving a string of consecutive tasks and playing out of certain specially selected positions. "I hope that this book will be of help not

only to high-ranking players at whom it is primarily aimed, but also to every reader who is serious about self-improvement and wishes to understand problems that grandmasters and masters face over the board and the ways they solve them; what are the reasons for errors they sometimes commit and how to avoid those mistakes." – Mark Dvoretsky, from his Foreword *Sabotaging the Sicilian, French & Caro-Kann with 2.b3* New In Chess Chess is 99% tactics. So to be a good chess player, you have to spend a lot of your training time on tactics. Although basic tactics are explained in a number good books, complicated tactics the kind that separate tournament winners from the pack require intuition, imagination and precision. *The Magic of Chess Tactics* helps you develop these qualities. Aimed primarily at aspiring chess players from club to master level who seriously want to improve their chess understanding, *The Magic of Chess Tactics* provides examples selected for both their entertainment and instructional value as well as detailed

explanations and exercises. Claus Dieter Meyer, chess author and FIDE Master, is a well-known analyst and professional chess trainer. Karsten Muller is an International Grandmaster and co-author, along with Frank Lamprecht, of the highly acclaimed *Secrets of Pawn Endings* and *Fundamental Chess Endings*. "I have come to realise that there are basically two types of chess tactics. First, simple kinds of combinations you need to know when you start to play chess. I still believe they are the basis of everything. Things that computers see in a half-second. But the book is not about them. For those simple tactics, old Koblentz books are more than enough. This book is about *complicated* chess tactics, the kind you sometimes need hours of analysis just to discover the truth of the position. It's hard to see and calculate perfectly on the board; one needs intuition, imagination and precision. "It's not easy to develop these qualities but I believe that the present book, full of examples and high quality analyses, will help you achieve that objective. Welcome to the magical world of tactics!" From the

Foreword by Alexei Shirov
A Guide for Games New In Chess

The King's Indian Attack is recommended by chess trainer Mark Dvoretsky as a good basis for building an opening repertoire.

This opening should be ideal for players who want to master a system based on thematic ideas.

Bologan's Caro-Kann

Boydell & Brewer Ltd

Red Porcelain, 1709 made ready for production by Johann Friedrich Boettger and universally known as Boettger red stoneware, represented the most elegant ceramics in Europe before

experimentation led to rediscovery in Europe of the coveted white hard-paste porcelain, also known as Meissen

Porcelain. Finished by the application of

sophisticated techniques, Boettger red stoneware soon ranked high in favor with princes, of whom ostentation was expected.

Combined with ruby glass, silver, gold and precious stones, it also entered the exalted sphere of the court treasury. Beginning

with the universal 'alchemist' Boettger himself, the present publication provides an overview of the ways artisans dealt creatively with this hard material,

how models were drawn from goldsmiths' art and what role was played by Boettger red stoneware in the Baroque treasury of Augustus the Strong.

Essays reveal that exquisitely finished Boettger stoneware also set trends in court art.

The Gradall Calder Publications Limited

This book contains archive quality photos and features a complete

history of International Harvester Australia with important dates such as the first Australian tractor built, the 10,000th tractor build date and more than 200 photos from

International Harvester Australia Archives. It also contains detailed

descriptions of every tractor made at Geelong Works, complete with build numbers of tractors produced and monthly serial number listing for tractors made from

1960-1982. This book also features a full list of headers (combines) built

at Geelong Works - both self-propelled and PTO driven, with build

numbers. It also includes a comprehensive list of implements built at

Geelong Works. A must have for every

International Harvester enthusiast!

Henrietta Temple

A history of the industrial and construction machines built by the International Harvester Company along with Hough and Dresser.

Wetlands and Urbanization Steve

Jackson Games

Around 1860 a wave of talented youth intensified the Berlin chess scene.

Within a short time

Berthold Suhle, Philipp Hirschfeld and Gustav Neumann ranked among

the best players in the world. After a few years, Suhle went on to become

an authority in ancient Greek, and Hirschfeld proved a successful

businessman (while remaining a sparring partner of Johannes Hermann Zukertort).

Neumann retained a fascination for the game and grew into one of the world's strongest players.

Despite their achievements little has

been known about their lives and games. Drawing on a range of sources, the authors fill this gap,

providing games with both old and new

analyses. An introductory chapter on Berlin chess

before 1860 and an

appendix on Bernhard von Guretzky-Cornitz

complete the book.

The Caro-Kann B.T. Batsford

This book is the first to treat the chemistry of superheavy elements, including important related nuclear aspects, as a self contained topic. It is written for those – students and novices -- who begin to work and those who are working in this fascinating and challenging field of the heaviest and superheavy elements, for their lecturers, their advisers and for the practicing scientists in the field – chemists and physicists - as the most complete source of reference about our today's knowledge of the chemistry of transactinides and superheavy elements. However, besides a number of very detailed discussions for the experts this book shall also provide interesting and easy to read material for teachers who are interested in this subject, for those chemists and physicists who are not experts in the field and for our interested fellow scientists in adjacent fields. Special emphasis is laid on an extensive

coverage of the original literature in the reference part of each of the eight chapters to facilitate further and deeper studies of specific aspects. The index for each chapter should provide help to easily find a desired topic and to use this book as a convenient source to get fast access to a desired topic.

Superheavy elements – chemical elements which are much heavier than those which we know of from our daily life – are a persistent dream in human minds and the kernel of science fiction literature for about a century.

Wetland Modelling CRC Press

Forgotten Realms creator Ed Greenwood opens the adventures of an unlikely new band of heroes who get into a bit more trouble than usual in the fabled port city of Waterdeep, but soon discover some of the seedier corners of the wider Realms — the hard way! Joined by artist Lee Ferguson and Sal Buscema, this new series kicks off a deadly tale with a kidnapping that is

more — and less — than it seems.
