GABRIELLE DAPHNE

[The Immune System Recovery Plan](#) Elsevier Health Sciences

"When President Nixon launched the War on Cancer with the signing of the National Cancer Act of 1971 and the allocation of billions of research dollars, it was amidst a flurry of promises that a cure was within reach. The research establishment was trumpeting the discovery of oncogenes, the genes that supposedly cause cancer. As soon as we identified them and treated cancer patients accordingly, cancer would become a thing of the past. Fifty years later it's clear that the War on Cancer has failed--despite what the cancer industry wants us to believe. New diagnoses have continued to climb; one in three people in the United States can now expect to battle cancer during their lifetime. For the majority of common cancers, the search for oncogenes has not changed the treatment: We're still treating with the same old triad of removing (surgery), burning out (radiation), or poisoning (chemotherapy). In *Cancer and the New Biology of Water*, Thomas Cowan, MD, argues that this failure was inevitable because the oncogene theory is incorrect--or at least incomplete--and based on a flawed concept of biology in which DNA controls our cellular function and therefore our health. Instead, Dr. Cowan tells us, the somatic mutations seen in cancer cells are the result of a cellular deterioration that has little to do with oncogenes, DNA, or even the nucleus. The root cause is metabolic dysfunction that deteriorates the structured water that forms the basis of

cytoplasmic health. Despite mainstream medicine's failure to bring an end to suffering or deliver on its promises, it remains illegal for physicians to prescribe anything other than the "standard of care" for their cancer patients, despite the fact that gentler, more effective, and more promising treatments exist"--

The Vaccine Book Springer Science & Business Media

In *How to End the Autism Epidemic*, Generation Rescue's co-founder J.B. Handley offers a compelling, science-based explanation of what's causing the autism epidemic, the lies that enable its perpetuation, and the steps we must take as parents and as a society in order to end it. While many parents have heard the rhetoric that vaccines are safe and effective and that the science is settled about the relationship between vaccines and autism, few realize that in the 1960s, American children received three vaccines compared to the thirty-eight they receive today. Or that when parents are told that the odds of an adverse reaction are "one in a million," the odds are actually one in fifty. Or that in the 1980s, the rate of autism was one in ten thousand children. Today it's one in thirty-six. Parents, educators, and social service professionals around the country are sounding an alarm that we are in the midst of a devastating public health crisis—one that corresponds in lockstep with an ever-growing vaccine schedule. Why do our public health officials refuse to investigate this properly—or even acknowledge it? In *How to End the Autism Epidemic*, Handley confronts and dismantles the most common lies about vaccines and autism. He then lays out, in detail, what the truth actually is: new published science links the aluminium adjuvant used in vaccines to immune activation events in the brains of infants, triggering autism; and there is a clear legal basis for the statement

that vaccines cause autism, including previously undisclosed depositions of prominent autism scientists under oath. While Handley's argument is unsparing, his position is ultimately moderate and constructive: we must continue to investigate the safety of vaccines, we must adopt a position of informed consent, and every individual vaccine must be considered on its own merits. This issue is far from settled. By refusing to engage with parents and other stakeholders in a meaningful way, our public health officials destroy the public trust and enable the suffering of countless children and families.

[Miller's Review of Critical Vaccine Studies](#) National Academies Press

In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. *Adverse Effects of Vaccines* reviews the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. *Adverse Effects of Vaccines* will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors.

[Human Heart, Cosmic Heart](#) Academic Press

Why do our bodies rebel against themselves? Why are autoimmune disorders on the rise? What role do everyday environmental toxins play in triggering onset of these diseases? The author answers these questions with personal stories and sound scientific research and offers ways to combat the problem.

[Vaccines, Autoimmunity, and the Changing Nature of Childhood Illness](#) Academic Press

Vaccines are among the most safe and effective public health interventions to prevent serious disease and death. Because of the success of vaccines, most Americans today have no firsthand experience with such devastating illnesses as polio or diphtheria. Health care providers who vaccinate young children follow a schedule prepared by the U.S. Advisory Committee on Immunization Practices. Under the current schedule, children younger than six may receive as many as 24 immunizations by their second birthday. New vaccines undergo rigorous testing prior to receiving FDA approval; however, like all medicines and medical interventions, vaccines carry some risk. Driven largely by concerns about potential side effects, there has been a shift in some parents' attitudes toward the child immunization schedule. The Childhood Immunization Schedule and Safety identifies research approaches, methodologies, and study designs that could address questions about the safety of the current schedule. This report is the most comprehensive examination of the immunization schedule to date. The IOM authoring committee uncovered no evidence of major safety concerns associated with adherence to the childhood immunization schedule. Should signals arise that there may be need for investigation, however, the report offers a framework for conducting safety research using existing or new data collection systems.

[Vaccines for Cancer Immunotherapy](#) Elsevier

By two years of age, healthy infants in the United States can receive up to 20 vaccinations to protect against 11 diseases. Although most people know that vaccines effectively protect against serious infectious diseases, approximately one-quarter of parents in a recent survey believe that infants get more vaccines than are good for them, and that too many immunizations could overwhelm an infant's immune system. The Immunization Safety Review Committee reviewed the evidence regarding the hypothesis that multiple immunizations increase the risk for immune dysfunction.

Specifically, the committee looked at evidence of potential biological mechanisms and at epidemiological evidence for or against causality related to risk for infections, the autoimmune disease type 1 diabetes, and allergic disorders.

[Vaccine Safety Forum](#) Chelsea Green Publishing

The immune system is the only organ system in the body besides the central nervous systems endowed with memory. Both types of memories are specific and long-lasting, sometimes life long. This memory capacity of the immune system provides the basis for the most cost-efficient of all medical interventions, successful vaccinations against many common infectious diseases. Such a success requires the isolation of the infectious agent or toxic substance, methods to grow and/or purify the relevant antigen and change it into something innocuous whilst maintaining its immunogenicity. Whereas the early vaccines could only use the enhanced resistance against infectious disease as a measure of vaccine efficacy, most modern vaccines rely upon standardized laboratory tests accepted to parallel the in vivo protective capacity to confirm the quality and potency of the respective vaccine. We are presently experiencing an explosion in the development of new and/or improved vaccines. This is largely due to a parallel rapid expansion in our knowledge of the immune system and of the detailed molecular structure and function of microorganisms. Using this knowledge it is now possible to compose vaccines of new types where only certain molecules (or parts of molecules) derived from a pathogen are included, excluding other potentially harmful ones. Whereas earlier attenuated live vaccines were created by empirical means such vaccines can now be created by molecularly defined interventions in the genome of the microorganism.

[What Your Doctor May Not Tell You about Children's Vaccinations](#) New Trends Publishing

In light of the discovery of Autoimmune Syndrome Induced by Adjuvants, or ASIA, *Vaccines and Autoimmunity* explores the role of adjuvants – specifically aluminum in different vaccines – and how they can induce diverse autoimmune clinical manifestations in genetically prone individuals.

Vaccines and Autoimmunity is divided into three sections; the first contextualizes the role of adjuvants in the framework of autoimmunity, covering the mechanism of action of adjuvants, experimental models of adjuvant induced autoimmune diseases, infections as adjuvants, the Gulf War Syndrome, sick-building syndrome (SBS), safe vaccines, toll-like receptors, TLRs in vaccines, pesticides as adjuvants, oil as adjuvant, mercury, aluminum and autoimmunity. The following section reviews literature on vaccines that have induced autoimmune conditions such as MMR and HBV, among others. The final section covers diseases in which vaccines were known to be the solicitor – for instance, systemic lupus erythematosus – and whether it can be induced by vaccines for MMR, HBV, HCV, and others. Edited by leaders in the field, *Vaccines and Autoimmunity* is an invaluable resource for advanced students and researchers working in pathogenic and epidemiological studies.

[Mosaic of Autoimmunity](#) Simon and Schuster

The bestselling book with 100,000 copies in print from one of the most sought-after experts in the field of functional medicine, Dr. Susan Blum, author of *Healing Arthritis*, shares the four-step program she used to treat her own serious autoimmune condition and help countless patients reverse their symptoms, heal their immune systems, and prevent future illness. DR. BLUM ASKS: • Are you constantly exhausted? • Do you frequently feel sick? • Are you hot when others are cold, or cold when everyone else is warm? • Do you have trouble thinking clearly, aka “brain fog”? • Do you often feel irritable? • Are you experiencing hair loss, dry skin, or unexplained weight fluctuation? • Do your joints ache or swell but you don't know why? • Do you have an overall sense of not feeling your best, but it has been going on so long it's actually normal to you? If you answered yes to any of these questions, you may have an autoimmune disease, and this book is the “medicine” you need. Among the most prevalent forms of chronic illness in this country, autoimmune disease affects nearly 23.5 million Americans. This epidemic—a result of the toxins in our diet; exposure to chemicals, heavy metals, and antibiotics; and unprecedented stress levels—has caused millions to suffer from autoimmune conditions such as Graves' disease, rheumatoid arthritis, Crohn's disease, celiac disease, lupus, and more. DR. BLUM'S INNOVATIVE METHOD FOCUSES ON: • Using food as medicine • Understanding the stress connection • Healing your gut and digestive system • Optimizing liver function Each of these sections includes an interactive workbook to help you determine and create your own personal treatment program. Also included are recipes for simple, easy-to-prepare dishes to jump-start the healing process. The Immune System Recovery Plan is a revolutionary way for people to balance their immune systems, transform their health, and live fuller, happier lives.

[Vaccines for the 21st Century](#) Simon and Schuster

Many infectious diseases are more frequent and are associated with high morbidity and mortality in older adults. Vaccination is the most efficient strategy to prevent infections, and older adults are an important target population for vaccination in order to promote health in this age group. Age-related changes in the immune system as well as other factors, such as comorbidities, obesity or frailty, influence vaccine-induced immune responses in old age. Awareness that vaccines developed for children might not be optimal for adults, and particularly for the older population, has only arisen in the recent past. Vaccination against influenza, pneumococcal disease, and herpes zoster is specifically recommended for older adults in many countries, and various strategies have been pursued in order to optimize these vaccines. However, there are still many pathogens, which severely affect the older population, but for which no vaccines are currently available. Extensive research and development are ongoing to further improve existing vaccines and to design novel vaccines in order to provide protection for this vulnerable age group. In order to exploit the full protective potential of vaccines it is essential to improve vaccine uptake and overcome vaccine hesitancy by providing information and education to stakeholders, health care professionals, and the general public. This book is relevant for researchers working on age-related changes in the immune system or on vaccine development, for health care professionals treating older patients, and for the stakeholders and decision makers involved in vaccination recommendations and implementation.

[The Truth About Contagion](#) Ballantine Books

The seventh edition of the Canadian Immunization Guide was developed by the National Advisory Committee on Immunization (NACI), with the support of the Immunization and Respiratory Infections Division, Public Health Agency of Canada, to provide updated information and recommendations on the use of vaccines in Canada. The Public Health Agency of Canada conducted a survey in 2004, which confirmed that the Canadian Immunization Guide is a very useful and reliable resource of information on immunization.

[Saying No to Vaccines](#) Simon and Schuster

An accessible and reassuring guide to childhood health and immunity from a pediatrician who's both knowledgeable about the latest scientific research and respectful of a family's risk factors, health history, and concerns In *The Vaccine-Friendly Plan*, Paul Thomas, M.D., presents his proven approach to building immunity: a new protocol that limits a child's exposure to aluminum, mercury, and other neurotoxins while building overall good health. Based on the results from his pediatric practice of more than eleven thousand children, as well as data from other credible and scientifically minded medical doctors, Dr. Paul's vaccine-friendly protocol gives readers • recommendations for a healthy pregnancy and childbirth • vital information about what to expect at every well child visit from birth through adolescence • a slower, evidence-based vaccine schedule that calls for only one aluminum-containing shot at a time • important questions to ask about your child's first few weeks, first years, and beyond • advice about how to talk to health care providers when you have concerns • the risks associated with opting out of vaccinations • a practical approach to common illnesses throughout the school years • simple tips and tricks for healthy eating and toxin-free living at any age *The Vaccine-Friendly Plan* presents a new standard for pediatric care, giving parents peace of mind in raising happy, healthy children. Praise for *The Vaccine-Friendly Plan* “Finally, a book about vaccines that respects parents! If you choose only one book to read on the topic, read *The Vaccine-Friendly Plan*. This impeccably researched, well-balanced book puts you in the driver's seat and empowers you to make conscientious vaccine decisions for your family.”—Peggy O'Mara, editor and publisher, *Mothering Magazine* “Sure to appeal to readers of all kinds as a friendly, no-nonsense book that cuts through the rhetoric surrounding vaccines. It offers validation to those who avoid some or all, while offering those who do want to vaccinate help on how to do so safely. This is a great book for anyone with children in their lives.”—Natural Mother “A valuable, science-supported guide to optimizing your child's health while you navigate through complex choices in a toxic, challenging world.”—Martha Herbert, M.D., Ph.D., Harvard Medical School “An impressively researched guide, this important book is essential reading for parents. With clear and practical advice for shielding children from harmful toxins, it will compel us

all to think differently about how to protect health.”—Jay Gordon, M.D., FAAP “Rather than a one-size-fits-all vaccine strategy, the authors suggest thoughtful, individualized decisions based on research and collaboration between parents and clinicians—a plan to optimize a child’s immune system and minimize any risks.”—Elizabeth Mumper, M.D., founder and CEO, The Rimland Center for Integrative Pediatrics “This well-written and thought-provoking book will encourage parents to think through decisions—such as food choices and the timing of vaccines—that affect the well-being of their children. In a world where children’s immune systems are increasingly challenged, this is a timely addition to the literature.”—Harriet Lerner, Ph.D., bestselling author of *The Dance of Anger* and *The Mother Dance*

Vaccines and Autoimmunity Springer Science & Business Media

5th Ed. Fifth Edition (2017) The parent’s definitive book on vaccine problems - a complete vaccine education. It will open your eyes. This book is written for everyone concerned about the health and well-being of their children and of themselves. This vaccination book is meticulously documented with over 300 references and does not represent special interests. It’s all there: the ingredients in vaccines, the dangers of vaccines, vaccine side effects, autism and vaccines, HPV vaccine, vaccine cover-ups, and more. The book is written in easy-to-understand language as well, not the med-speak found in medical journals. It covers the important vaccine events of the past year, which have been kept out of most media. It is not an anti-vaccine textbook. It is in favor of any vaccines that have proven to be 100% safe, effective, and necessary when tested by independent, third-party research that is wholly unconnected with vaccine manufacturers. Since so many doctors don’t vaccinate their own kids, perhaps it isn’t a good idea to get all your information about vaccines from advertising or from the people selling them. See what the scientists who make the vaccines have to say. Only then will you have what you need to make an informed decision about how to best care for your child. That responsibility is yours. Not your doctor’s. Not the FDA’s. And definitely not any lawmaker’s. Whether or not to vaccinate your child is arguably the most important decision you will ever make for them. So if you’re having the slightest doubts about the safety of the vaccines you’re about to give your child, get the facts, from the most reliable vaccine book available today. “It is impossible to estimate the true value of Dr. O’Shea’s work. His review of the history of the vaccination industry is vastly more thorough than that taught in medical schools and decisively more balanced.” -David Ayoub, MD

[The Childhood Immunization Schedule and Safety](#) Simon and Schuster

Two leading advocates for modern vaccines answer parents’ numerous questions about the underlying science of modern vaccines and the value of childhood immunization, while addressing parents’ concerns about vaccine safety.

[Idiotypes in Medicine: Autoimmunity, Infection and Cancer](#) Royal Society of Chemistry

Thomas Cowan was a 20-year-old Duke grad—bright, skeptical, and already disillusioned with industrial capitalism—when he joined the Peace Corps in the mid-1970s for a two-year tour in Swaziland. There, he encountered the work of Rudolf Steiner and Weston A. Price—two men whose ideas would fascinate and challenge him for decades to come. Both drawn to the art of healing and repelled by the way medicine was—and continues to be—practiced in the United States, Cowan returned from Swaziland, went to medical school, and established a practice in New Hampshire and, later, San Francisco. For years, as he raised his three children, suffered the setback of divorce, and struggled with a heart condition, he remained intrigued by the work of Price and Steiner and, in particular, with Steiner’s provocative claim that the heart is not a pump. Determined to practice medicine in a way that promoted healing rather than compounded ailments, Cowan dedicated himself to understanding whether Steiner’s claim could possibly be true. And if Steiner was correct, what, then, is the heart? What is its true role in the human body? In this deeply personal, rigorous, and riveting account, Dr. Cowan offers up a daring claim: Not only was Steiner correct that the heart is not a pump, but our understanding of heart disease—with its origins in the blood vessels—is completely wrong. And this gross misunderstanding, with its attendant medications and risky surgeries, is the reason heart disease remains the most common cause of death worldwide. In *Human Heart, Cosmic Heart*, Dr. Thomas Cowan presents a new way of understanding the body’s most central organ. He offers a new look at what it means to be human and how we can best care for ourselves—and one another.

Canadian Immunization Guide National Academies Press

This is the most comprehensive review of the idiotypic network available. All the current knowledge of idiotypes of the various antibodies is incorporated in this volume. The pathogenic role of idiotypes in autoimmunity and cancer is reviewed in depth. The therapeutic part focusses on harnessing anti-idiotypes for treating autoimmunological disorders, and on the employment of idiotypes for vaccines in cancer and infectious diseases, as well as explaining the manipulation of the idiotypic network in autoimmunity and cancer idiotypes and vaccines.

Immunization Safety Review National Academies Press

The Mosaic of Autoimmunity: The Novel Factors of Autoimmune Diseases describes the multifactorial origin and diversity of expression of autoimmune diseases in humans. The term implies that different combinations of factors in autoimmunity produce varying and unique clinical pictures in a wide spectrum of autoimmune diseases. Most of the factors involved in autoimmunity can be categorized into four groups: genetic, immune defects, hormonal and environmental factors. In this book, the environmental factors are reviewed, including infectious agents, vaccines as triggers of autoimmunity, smoking and its relationship with rheumatoid arthritis, systemic lupus erythematosus, thyroid disease, multiple sclerosis and inflammatory bowel diseases. An entirely new syndrome, the autoimmune/inflammatory syndrome induced by adjuvants (ASIA), is also included, along with other diseases that are now recognized as having an autoimmune etiopathogenesis. Highlights the concept of the mosaic of autoimmune manifestations Includes new visions on unsuspected molecules Provides updated knowledge to physicians helping patients with autoimmune diseases Presents thorough, up-to-date information on specific diseases, along with clinical applications

Vaccinophobia and Vaccine Controversies of the 21st Century Simon and Schuster

With a new pharmacy-specific approach to immunology, *Immunology for Pharmacy* prepares pharmacists for practice by providing a complete understanding of the basis of immunology and the consequences of either suppressing or enhancing immune function. It covers key subjects such as prophylaxis and vaccination, antibodies as therapeutic and diagnostic agents, biological modifiers, and the rationale for use and mechanisms of therapeutic agents. Written by experienced author and educator Dennis Flaherty, this book presents topics with a logical, step-by-step approach, explaining concepts and their practical application. A companion Evolve website reinforces your understanding with flashcards and animations. Pharmacy-specific coverage narrows the broad field of immunology to those areas most pertinent and clinically relevant to pharmacy students. 165 full-color illustrations help to illuminate difficult concepts. Factors That Influence the Immune Response chapter covers biological agents including bacteria, viruses, and fungi, and their related toxins and how they relate to the immune system. Three chapters on vaccinations prepare you for this important part of the pharmacist’s role by discussing cancer treatment with whole tumor vaccines, cell vaccines, and viral vector vaccines, describing other vaccines such as recombinant vaccines and plant vaccines, and examining how diseases such as diphtheria, whooping cough, and tetanus respond to vaccinations. A summary of drugs used in treating each condition helps you understand typical treatments and their immunological mechanisms, so you can choose proper treatments. Integrated information makes it easier to understand how various parts of the immune system work together, leading to a better understanding of immunology as a whole. A unique focus on practical application and critical thinking shows the interrelationship of concepts and makes it easier to apply theory to practice. Information on AIDS covers the identification and treatment of both strains of HIV as well as AIDS, preparing you for diseases you will see in practice. Unique student-friendly features simplify your study with learning objectives and key terms at the beginning of each chapter, bulleted summaries and self-assessment questions at the end of each chapter, and a glossary at the back of the book. Over 60 tables summarize and provide quick reference to important material. A companion Evolve website includes animations and pharmacy terminology flashcards.

[The Fourfold Path to Healing](#) National Academies Press

COMPLETELY REVISED AND UPDATED IN 2019 ***New Covid Chapter Added in 2023*** The Vaccine Book offers parents a fair, impartial, fact-based resource from the most trusted name in pediatrics. Dr. Bob devotes each chapter in the book to a disease/vaccine pair and offers a comprehensive discussion of what the disease is, how common or rare it is, how serious or harmless it is, the ingredients of the vaccine, and any possible side effects from the vaccine. This completely revised edition offers: Updated information on each vaccine and disease More detail on vaccines’ side effects Expanded discussions of combination vaccines A new section on adult vaccines Additional options for alternative vaccine schedules A guide to Canadian vaccinations The Vaccine Book provides exactly the information parents want and need as they make their way through the vaccination maze.

[Gulf War and Health](#) Simon and Schuster

The Immunization Safety Review Committee was established by the Institute of Medicine (IOM) to evaluate the evidence on possible causal associations between immunizations and certain adverse outcomes, and to then present conclusions and recommendations. The committee’s mandate also includes assessing the broader societal significance of these immunization safety issues. While all the committee members share the view that immunization is generally beneficial, none of them has a vested interest in the specific immunization safety issues that come before the group. The committee reviews three immunization safety review topics each year, addressing each one at a time. In this fifth report in a series, the committee examines the hypothesis that exposure to polio vaccine contaminated with simian virus 40 (SV40), a virus that causes inapparent infection in some monkeys, can cause certain types of cancer.
