According to recent scientific data, the quantified targets of the Climate Change Convention and the Kyoto Protocol to reduce emissions of greenhouse gases will not be sufficient to prevent anthropogenic dangerous interference with the climate system. It is not likely that the new targets that are currently being negotiated will prevent this either. It will therefore be necessary for countries to adapt to climate change, including a sea level rise. Unlike developed countries, such as the Netherlands, many developing countries do not have the technological, economic and administrative capacities to prepare their infrastructure and societies in time for the inevitable injurious consequences of climate change. Low-lying island states, such as the Maldives and Tuvalu, and low-lying coastal areas, such as some areas in Alaska and along the Gulf of Bengal, will (partially) disappear under sea level. This may result in mass migration of people and even peoples during this century. However, these climate change-displaced persons do not have access to other countries and lack adequate international judicial protection. The improvement of their situation is urgent. This booklet contains the inaugural lecture given by the author on accepting the Chair of Professor of International Environmental Law at the Faculty of Law of the University of Amsterdam (UvA) on 4 December 2008.

Decolonial Judaism: Triumphal Failures of Barbaric Thinking explores the relationship among geopolitics, religion, and social theory. It argues that during the postcolonial and post-Holocaust era, Jewish thinkers in different parts of the world were influenced by Global South thought and mobilized this rich set of intellectual resources to confront the assimilation of normative Judaism by various incipient neo-colonial powers. By tracing the historical and conceptual lineage of this overlooked conversation, this book explores not only its epistemological opportunities, but also the internal contradictions that led to its ultimate unraveling, especially in the post-9/11 world.

Waterstones' Children's Book Prize 2019, Klaus Flugge Prize 2019 and Independent Bookshop Week Awards 2019 There was once a little boy who was afraid of the dark. There's nothing unusual about that. Most children are afraid of the dark at one time or another. But this little boy was a Prince, and he decided that when he became King, he would do something about the dark. He would ban it. When the King bans the dark completely, installing an artificial sun, and enforcing "anti-dark" laws, it seems like a good idea. The citizens don't need to worry about any of the scary things that might live in the dark. But what happens when nobody can sleep, and the citizens revolt? Will the King face his fears and turn the lights off? The King Who Banned the Dark is a beautiful and thought-provoking story about how we need the dark in order to enjoy the light.

This book provides dental professionals with a clear understanding of current clinical and scientific knowledge on the various aspects of pulp treatment for both primary and young permanent teeth. Diagnostic parameters are clearly presented, along with step-by-step descriptions of clinical procedures, including indirect and direct pulp treatments, pulpotomy, and pulpectomy. The rationale for the materials used in each technique and their individual merits and disadvantages are examined in detail. In the case of pulpotomy, all the materials used since the introduction of this treatment modality are discussed (e.g., formocresol, glutaraldehyde, ferric sulfate, and MTA) and the roles of sodium hypochlorite, electrofulguration, and laser therapy are elucidated. Special attention is devoted to pulpectomy and root canal treatment, with consideration of debriding and obturation techniques, rinsing solutions, and root-filling pastes. A further individual chapter is dedicated to restorations of teeth treated with the different types of pulp therapy. The various conservative treatment modalities are also presented, including specific treatments for immature nonvital permanent teeth. The concluding chapter looks to the future and the potential value of stem cells in pulp therapy.

This book serves as a clinical guide to help the practitioner improve endodontic treatment outcomes. It focuses on the various factors affecting the prognosis of endodontic treatments and on their impact on short-term and long-term results. The text incorporates up-to-date knowledge, techniques and treatment protocols. Each chapter has been carefully chosen to address either foundational knowledge or a select aspect of endodontic treatment. The authors analyze the knowledge accumulated from a large number of outcome studies and provide the reader with a critical appraisal indicating the strengths and weaknesses of those studies. This information is then used to make recommendations on how to predict the outcome of the intended treatment. The authors emphasize that the endodontic prognosis is a multifactorial phenomenon, underscoring how various factors, singularly and in combination, influence the treatment outcome. Readers are provided with tools to successfully assess the prognosis of the proposed treatment at the outset and to execute the planned treatment focused on optimal outcome.
