MOODY GARZA

The Emperor of All Maladies Metropolitan Books

A historical assessment of cancer addresses both the courageous battles against the complex disease and the misperceptions and hubris that have compromised modern understandings, providing coverage of such topics as ancient-world surgeries and the developments of present-day treatments.

The Emperor of All Maladies Hyperink Inc

A riveting exploration of the most difficult and important part of what doctors do, by Yale School of Medicine physician Dr. Lisa Sanders, author of the monthly New York Times Magazine column "Diagnosis," the inspiration for the hit Fox TV series *House, M.D.*

"The experience of being ill can be like waking up in a foreign country. Life, as you formerly knew it, is on hold while you travel through this other world as unknown as it is unexpected. When I see patients in the hospital or in my office who are suddenly, surprisingly ill, what they really want to know is, 'What is wrong with me?' They want a road map that will help them manage their new surroundings. The ability to give this unnerving and unfamiliar place a name, to know it—on some level—restores a measure of control, independent of whether or not that diagnosis comes attached to a cure. Because, even today, a diagnosis is frequently all a good doctor has to offer." A healthy young man suddenly loses his memory—making him unable to remember the events of each passing hour. Two patients diagnosed with Lyme disease improve after antibiotic treatment—only to have their symptoms mysteriously return. A young woman lies dying in the

ICU—bleeding, jaundiced, incoherent—and none of her doctors know what is killing her. In *Every Patient Tells a Story*, Dr. Lisa Sanders takes us bedside to witness the process of solving these and other diagnostic dilemmas, providing a firsthand account of the expertise and intuition that lead a doctor to make the right diagnosis. Never in human history have doctors had the knowledge, the tools, and the skills that they have today to diagnose illness and disease. And yet mistakes are made, diagnoses missed, symptoms or tests misunderstood. In this high-tech world of modern medicine, Sanders shows us that knowledge, while essential, is not sufficient to unravel the complexities of illness. She presents an unflinching look inside the detective story that marks nearly every illness—the diagnosis—revealing the combination of uncertainty and intrigue that doctors face when confronting patients who are sick or dying. Through dramatic stories of patients with baffling symptoms, Sanders portrays the absolute necessity and surprising difficulties of getting the patient's story, the challenges of the physical exam, the pitfalls of doctor-to-doctor communication, the vagaries of tests, and the near calamity of diagnostic errors. In *Every Patient Tells a Story*, Dr. Sanders chronicles the real-life drama of doctors solving these difficult medical mysteries that not only illustrate the art and science of diagnosis, but often save the patients' lives.

The Gene CreateSpace

A New York Times Book Review Notable Book of the Year “[A] tremendously moving memorial to a first-class historian and essayist . . . humane, fearless, unsparingly honest.” —The Financial Times “[A] memorable collection from a memorable

man.” —BookPage “It might be thought the height of poor taste to ascribe good fortune to a healthy man with a young family struck down at the age of sixty by an incurable degenerative disorder from which he must shortly die. But there is more than one sort of luck. To fall prey to a motor neuron disease is surely to have offended the Gods at some point, and there is nothing more to be said. But if you must suffer thus, better to have a well-stocked head.” —Tony Judt *The Memory Chalet* is a memoir unlike any you have ever read before. Each essay charts some experience or remembrance of the past through the sieve of Tony Judt's prodigious mind. His youthful love of a particular London bus route evolves into a reflection on public civility and interwar urban planning. Memories of the 1968 student riots of Paris meander through the divergent sex politics of Europe, before concluding that his generation “was a revolutionary generation, but missed the revolution.” A series of road trips across America lead not just to an appreciation of American history, but to an eventual acquisition of citizenship. Foods and trains and long-lost smells all compete for Judt's attention; but for us, he has forged his reflections into an elegant arc of analysis. All as simply and beautifully arranged as a Swiss chalet—a reassuring refuge deep in the mountains of memory.

Long for This World Simon and Schuster

Winner of the Pulitzer Prize and a documentary from Ken Burns on PBS, this New York Times bestseller is “an extraordinary achievement” (The New Yorker)—a magnificent, profoundly humane “biography” of cancer—from its first documented appearances thousands of years ago through the epic battles in the twentieth century to cure, control, and conquer it to a radical

new understanding of its essence. Now includes an excerpt from Siddhartha Mukherjee's new book *Song of the Cell!* Physician, researcher, and award-winning science writer, Siddhartha Mukherjee examines cancer with a cellular biologist's precision, a historian's perspective, and a biographer's passion. The result is an astonishingly lucid and eloquent chronicle of a disease humans have lived with—and perished from—for more than five thousand years. The story of cancer is a story of human ingenuity, resilience, and perseverance, but also of hubris, paternalism, and misperception. Mukherjee recounts centuries of discoveries, setbacks, victories, and deaths, told through the eyes of his predecessors and peers, training their wits against an infinitely resourceful adversary that, just three decades ago, was thought to be easily vanquished in an all-out “war against cancer.” The book reads like a literary thriller with cancer as the protagonist. Riveting, urgent, and surprising, *The Emperor of All Maladies* provides a fascinating glimpse into the future of cancer treatments. It is an illuminating book that provides hope and clarity to those seeking to demystify cancer.

 #1 NEW YORK TIMES BESTSELLER • “The story of modern medicine and bioethics—and, indeed, race relations—is refracted beautifully, and movingly.”—Entertainment Weekly NOW A MAJOR MOTION PICTURE FROM HBO® STARRING OPRAH WINFREY AND ROSE BYRNE • ONE OF THE “MOST INFLUENTIAL” (CNN), “DEFINING” (LITHUB), AND “BEST” (THE PHILADELPHIA INQUIRER) BOOKS OF THE DECADE • ONE OF ESSENCE'S 50 MOST IMPACTFUL BLACK BOOKS OF THE PAST 50 YEARS • WINNER OF THE CHICAGO TRIBUNE HEARTLAND PRIZE FOR

NONFICTION NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review • Entertainment Weekly • O: The Oprah Magazine • NPR • Financial Times • New York • Independent (U.K.) • Times (U.K.) • Publishers Weekly • Library Journal • Kirkus Reviews • Booklist • Globe and Mail Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb's effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was

consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

Guide to Siddhartha Mukherjee's *the Emperor of All Maladies*
Celadon Books

A surprisingly open memoir co-authored by the married duo of a world class oncologist and a cancer survivor about love, pain, hope, strength and resilience while navigating the overwhelming breast cancer advocacy movement. *Off Our Chests* recounts the story of Liza and John's experience with her diagnosis and treatment. Written in alternating voices, Liza details her treatment, the complex decisions she had to make throughout her course of chemotherapy and radiation, including clinical trial participation and an elective double mastectomy, the added complexity of being treated at the cancer center of which John was the chief of hematology and oncology, and the emotional impact of knowing she may die as a young woman with young children. John, who lost his own mother to cancer at the age of 13, provides an inside look into the world of cancer care and research, but also the perspective of someone who understands the medicine but who was unprepared for assuming the role of caregiver and worried husband. John adds insights into his world of running the clinical operations of the cancer center where Liza would receive her care, commentary on the breast cancer machine, the need for clinical research, the high cost of cancer

care, and an easy to understand explanation of the clinical and scientific background of oncology. While they both felt that they were already expert commentators on their own "Cancer Channel" during the course of Liza's illness, they both came to realize how little understanding they truly had of what a cancer diagnosis does to the patient, caregivers, children, family members, and friends. Liza and John share their most intimate thoughts, including many that were previously unsaid--even between the two of them. Both gain an understanding of the other's life, a deeper appreciation of what it means to be a cancer patient, and of the emotional strains of being an oncologist where so many of the patients die on their watch.

Physician Leadership Scribner Book Company

The Age of Wonder is a colorful and utterly absorbing history of the men and women whose discoveries and inventions at the end of the eighteenth century gave birth to the Romantic Age of Science. When young Joseph Banks stepped onto a Tahitian beach in 1769, he hoped to discover Paradise. Inspired by the scientific ferment sweeping through Britain, the botanist had sailed with Captain Cook in search of new worlds. Other voyages of discovery—astronomical, chemical, poetical, philosophical—swiftly follow in Richard Holmes's thrilling evocation of the second scientific revolution. Through the lives of William Herschel and his sister Caroline, who forever changed the public conception of the solar system; of Humphry Davy, whose near-suicidal gas experiments revolutionized chemistry; and of the great Romantic writers, from Mary Shelley to Coleridge and Keats, who were inspired by the scientific breakthroughs of their day, Holmes brings to life the era in which we first realized both

the awe-inspiring and the frightening possibilities of science—an era whose consequences are with us still. **BONUS MATERIAL:** This ebook edition includes an excerpt from Richard Holmes's *Falling Upwards*.

 The Emperor of All Maladies by Siddhartha Mukherjee | Key Takeaways & Analysis
 Preview: Scientist and physician Siddhartha Mukherjee, author of *The Emperor of All Maladies*, calls his book a biography of cancer rather than simply a history. The author explores a wide range of research, historical accounts, and personal stories in this intensive look at the backstory of cancer. This includes the evolution of cancer's nature, treatment, and the scientific and medical communities' understanding of the disease as well as the support of the public and politicians in the crucial fight to find a cure. The author examines historical accounts of cancer, focusing mostly on events dating from the 1940s to present time. Along the way, he discusses how cancer research evolved and how the perceptions of the disease and its impact on the world changed with each account. Over time, proposed causes for cancer ran the gamut, some of which are proven to be true to this day, while others remain confined to the history books...

Cancer Ideapress Publishing

Based on the PBS documentary by Ken Burns, Erik Ewers, and Christopher Loren Ewers. On September 30, 1889, W.W. Mayo and his sons Will and Charlie performed the very first operation at

a brand-new Catholic hospital in Rochester, Minnesota. It was called Saint Marys. The hospital arose out of the devastation of a tornado that had struck the town six years earlier. After the storm, Mother Alfred Moes of the Sisters of Saint Francis told the Mayos that she had a vision of building a hospital that would "become world renowned for its medical arts." Based on the film by acclaimed documentary filmmaker Ken Burns, *The Mayo Clinic: Faith, Hope, Science* chronicles the history of this unique organization, from its roots as an unlikely partnership between a country doctor and a Franciscan order of nuns to its position today as a worldwide model for patient care, research, and education. Featuring more than 400 compelling archival and modern images, as well as the complete script from the film, the book demonstrates how the institution's remarkable 150-year history continues to inspire the way medicine is practiced there today. In addition, a series of case studies reveals patients, doctors, and nurses in their most private moments as together they face difficult diagnoses and embark on uncertain treatments. The film and this companion book tell the story of an organization that has managed to stay true to its primary value—the needs of the patient come first. Together, they make an important contribution to the critical discussions about the delivery of health care today in America ... and the world.

'Bilston is a magician with words' - Guardian
 The perfect, witty gift for Valentine's and beyond. Alexa, what is there to know about love? is a wonderful collection of poems by Brian Bilston, Twitter's 'unofficial poet laureate', in which he frets over the challenges of modern life, extols the pleasures of books, broods

over politics, and ponders the curiosities of language. But at its heart, this is a collection of poems about love. From our caveman days to the internet era, from first dates to love in old age, Alexa, what is there to know about love? has a love poem for every time, place and occasion – and will stir the soul of even the most jaded romantic. ‘Brian Bilston is a laureate for our fractured times.’ - Ian McMillan ‘Someone who knows their way round both a joke and a bittersweet narrative.’ - The Times ‘Part John Cooper Clarke, part Frank Sidebottom . . . all brilliant.’ - Esquire

Swimming in a Sea of Death Simon and Schuster

The #1 NEW YORK TIMES Bestseller The basis for the PBS Ken Burns Documentary *The Gene: An Intimate History* Now includes an excerpt from Siddhartha Mukherjee’s new book *Song of the Cell!* From the Pulitzer Prize-winning author of *The Emperor of All Maladies*—a fascinating history of the gene and “a magisterial account of how human minds have laboriously, ingeniously picked apart what makes us tick” (Elle). “Sid Mukherjee has the uncanny ability to bring together science, history, and the future in a way that is understandable and riveting, guiding us through both time and the mystery of life itself.” —Ken Burns “Dr. Siddhartha Mukherjee dazzled readers with his Pulitzer Prize-winning *The Emperor of All Maladies* in 2010. That achievement was evidently just a warm-up for his virtuoso performance in *The Gene: An Intimate History*, in which he braids science, history, and memoir into an epic with all the range and biblical thunder of *Paradise Lost*” (The New York Times). In this biography Mukherjee brings to life the quest to understand human heredity and its surprising influence on our lives, personalities, identities, fates, and choices. “Mukherjee expresses abstract intellectual ideas

through emotional stories...[and] swaddles his medical rigor with rhapsodic tenderness, surprising vulnerability, and occasional flashes of pure poetry” (The Washington Post). Throughout, the story of Mukherjee’s own family—with its tragic and bewildering history of mental illness—reminds us of the questions that hang over our ability to translate the science of genetics from the laboratory to the real world. In riveting and dramatic prose, he describes the centuries of research and experimentation—from Aristotle and Pythagoras to Mendel and Darwin, from Boveri and Morgan to Crick, Watson and Franklin, all the way through the revolutionary twenty-first century innovators who mapped the human genome. “A fascinating and often sobering history of how humans came to understand the roles of genes in making us who we are—and what our manipulation of those genes might mean for our future” (Milwaukee Journal-Sentinel), *The Gene* is the revelatory and magisterial history of a scientific idea coming to life, the most crucial science of our time, intimately explained by a master. “The Gene is a book we all should read” (USA TODAY).

You know how to practice medicine. Now learn how to lead with this insightful resource from one of medicine’s most accomplished leaders. In *Physician Leadership*, renowned medical leader Dr. Karen J. Nichols delivers a concise guide for busy physicians doing their best to successfully lead people and

organizations. The book covers foundational leadership essentials that every physician needs to master to transform themselves from a highly motivated novice leader into an effective, skilled, and productive leader. Each chapter offers readers a summary of the crucial points found within, sample questions, exercises, and a bibliography of the relevant academic literature for further study. Ideal for doctors who don't have the time to peruse an unwieldy collection of the latest research and thought on organizational leadership, or to take a multi-day course on effective leadership, *Physician Leadership* distills the author's extensive research and personal experience into a short and practical handbook. *Physician Leadership* provides actionable, real-world advice for practicing and aspiring physicians: A thorough introduction to personal approach and style when interacting with patients, managers, boards, and committees An exploration of how to employ the principles of effective communication to achieve desired results and practical techniques for implementing those principles Practical discussions of the role that perspectives play in shaping an organization's culture and how those perspectives affect leadership efficacy In-depth examinations of approaches to decision-making that get buy-in from others and achieve results Perfect for doctors stepping into a leadership role for the first time, *Physician Leadership* also belongs on the bookshelves of experienced physician leaders seeking to improve their leadership abilities and improve the results of their organizations.

This well-written, opinionated, and engaging book explains what we can do differently to make serious and sustained progress against cancer—and how we can avoid repeating the policy and practice mistakes of the past.

[The Emperor of All Maladies](#) Penguin

The story of the war on cancer spans centuries and continents. It is a scientific story, but also a deeply human one: of doctors, researchers, and especially patients who through courage, suffering, and occasional hubris pushed the boundaries of knowledge. These people helped define cancer as the scourge of the modern age, and then mobilized the federal government and private industry to wage an all-out campaign against it a campaign we are still fighting. *Cancer: The Emperor of All Maladies*, based on the Pulitzer Prize-winning book by Siddhartha Mukherjee, tells the complete story of cancer, from its first description in an ancient Egyptian scroll to the gleaming laboratories of modern research institutions. At six hours, the film interweaves a sweeping historical narrative; with intimate stories about contemporary patients; and an investigation into the latest scientific breakthroughs that may have brought us, at long last, to the brink of lasting cures. This DVD is the full six hour series of an edited version that was broadcast on SBS TV.

WINNER OF THE 2020 PULITZER PRIZE IN GENERAL NONFICTION

"The Undying is a startling, urgent intervention in our discourses about sickness and health, art and science, language and literature, and mortality and death. In dissecting what she terms

'the ideological regime of cancer,' Anne Boyer has produced a profound and unforgettable document on the experience of life itself." —Sally Rooney, author of *Normal People* "Anne Boyer's radically unsentimental account of cancer and the 'carcinogenosphere' obliterates cliché. By demonstrating how her utterly specific experience is also irreducibly social, she opens up new spaces for thinking and feeling together. *The Undying* is an outraged, beautiful, and brilliant work of embodied critique." —Ben Lerner, author of *The Topeka School* A week after her forty-first birthday, the acclaimed poet Anne Boyer was diagnosed with highly aggressive triple-negative breast cancer. For a single mother living paycheck to paycheck who had always been the caregiver rather than the one needing care, the catastrophic illness was both a crisis and an initiation into new ideas about mortality and the gendered politics of illness. A twenty-first-century *Illness as Metaphor*, as well as a harrowing memoir of survival, *The Undying* explores the experience of illness as mediated by digital screens, weaving in ancient Roman dream diarists, cancer hoaxers and fetishists, cancer vloggers, corporate lies, John Donne, pro-pain "dolorists," the ecological costs of chemotherapy, and the many little murders of capitalism. It excoriates the pharmaceutical industry and the bland hypocrisies of "pink ribbon culture" while also diving into the long literary line of women writing about their own illnesses and ongoing deaths: Audre Lorde, Kathy Acker, Susan Sontag, and others. A genre-bending memoir in the tradition of *The Argonauts*, *The Undying* will break your heart, make you angry enough to spit, and show you contemporary America as a thing both desperately ill and occasionally, perversely glorious. Includes black-and-white

illustrations

Your Cancer Road Map Flatiron Books

Essential, required reading for doctors and patients alike: A Pulitzer Prize-winning author and one of the world's premiere cancer researchers reveals an urgent philosophy on the little-known principles that govern medicine—and how understanding these principles can empower us all. Over a decade ago, when Siddhartha Mukherjee was a young, exhausted, and isolated medical resident, he discovered a book that would forever change the way he understood the medical profession. The book, *The Youngest Science*, forced Dr. Mukherjee to ask himself an urgent, fundamental question: Is medicine a "science"? Sciences must have laws—statements of truth based on repeated experiments that describe some universal attribute of nature. But does medicine have laws like other sciences? Dr. Mukherjee has spent his career pondering this question—a question that would ultimately produce some of the most serious thinking he would do around the tenets of his discipline—culminating in *The Laws of Medicine*. In this important treatise, he investigates the most perplexing and illuminating cases of his career that ultimately led him to identify the three key principles that govern medicine. Brimming with fascinating historical details and modern medical wonders, this important book is a fascinating glimpse into the struggles and Eureka! moments that people outside of the medical profession rarely see. Written with Dr. Mukherjee's signature eloquence and passionate prose, *The Laws of Medicine* is a critical read, not just for those in the medical profession, but for everyone who is moved to better understand how their health and well-being is being treated. Ultimately, this book lays the

groundwork for a new way of understanding medicine, now and into the future.

The Emperor of All Maladies Crown

#1 NEW YORK TIMES BESTSELLER • PULITZER PRIZE FINALIST •

This inspiring, exquisitely observed memoir finds hope and beauty in the face of insurmountable odds as an idealistic young neurosurgeon attempts to answer the question What makes a life worth living? NAMED ONE OF PASTE'S BEST MEMOIRS OF THE DECADE • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review • People • NPR • The Washington Post • Slate • Harper's Bazaar • Time Out New York • Publishers Weekly • BookPage Finalist for the PEN Center USA Literary Award in Creative Nonfiction and the Books for a Better Life Award in Inspirational Memoir At the age of thirty-six, on the verge of completing a decade's worth of training as a neurosurgeon, Paul Kalanithi was diagnosed with stage IV lung cancer. One day he was a doctor treating the dying, and the next he was a patient struggling to live. And just like that, the future he and his wife had imagined evaporated. When *Breath Becomes Air* chronicles Kalanithi's transformation from a naïve medical student "possessed," as he wrote, "by the question of what, given that all organisms die, makes a virtuous and meaningful life" into a neurosurgeon at Stanford working in the brain, the most critical place for human identity, and finally into a patient and new father confronting his own mortality. What makes life worth living in the face of death? What do you do when the future, no longer a ladder toward your goals in life, flattens out into a perpetual present? What does it mean to have a child, to nurture a new life as another fades away? These are some of the

questions Kalanithi wrestles with in this profoundly moving, exquisitely observed memoir. Paul Kalanithi died in March 2015, while working on this book, yet his words live on as a guide and a gift to us all. "I began to realize that coming face to face with my own mortality, in a sense, had changed nothing and everything," he wrote. "Seven words from Samuel Beckett began to repeat in my head: 'I can't go on. I'll go on.'" When *Breath Becomes Air* is an unforgettable, life-affirming reflection on the challenge of facing death and on the relationship between doctor and patient, from a brilliant writer who became both.

Principles of Cancer Biology Simon and Schuster

In *The Genome Odyssey*, Dr. Euan Ashley, Stanford professor of medicine and genetics, brings the breakthroughs of precision medicine to vivid life through the real diagnostic journeys of his patients and the tireless efforts of his fellow doctors and scientists as they hunt to prevent, predict, and beat disease. Since the Human Genome Project was completed in 2003, the price of genome sequencing has dropped at a staggering rate. It's as if the price of a Ferrari went from \$350,000 to a mere forty cents. Through breakthroughs made by Dr. Ashley's team at Stanford and other dedicated groups around the world, analyzing the human genome has decreased from a heroic multibillion dollar effort to a single clinical test costing less than \$1,000. For the first time we have within our grasp the ability to predict our genetic future, to diagnose and prevent disease before it begins, and to decode what it really means to be human. In *The Genome Odyssey*, Dr. Ashley details the medicine behind genome sequencing with clarity and accessibility. More than that, with passion for his subject and compassion for his patients, he

introduces readers to the dynamic group of researchers and doctor detectives who hunt for answers, and to the pioneering patients who open up their lives to the medical community during their search for diagnoses and cures. He describes how he led the team that was the first to analyze and interpret a complete human genome, how they broke genome speed records to diagnose and treat a newborn baby girl whose heart stopped five times on the first day of her life, and how they found a boy with

tumors growing inside his heart and traced the cause to a missing piece of his genome. These patients inspire Dr. Ashley and his team as they work to expand the boundaries of our medical capabilities and to envision a future where genome sequencing is available for all, where medicine can be tailored to treat specific diseases and to decode pathogens like viruses at the genomic level, and where our medical system as we know it has been completely revolutionized.
