The Internet of Things (IoT) - What it is and why it ...

What is the Internet of Things? | IoT Technology

The Internet of Things is a network of physical objects - vehicles, machines, home appliances, and more - that use sensors and APIs to connect and exchange data over the Internet. How does the IoT work? The IoT depends on a whole host of technologies - such as application programming interfaces (APIs) that connect devices to the Internet.

The Internet of Things - Facts For Kids, Technology - Kinooze

The IoT is a giant network of connected "things" (which also includes people). The relationship will be between people-people, people-things, and things-things.

The internet of things and accounting: lessons from China ...

In what's called the Internet of Things, sensors and actuators embedded in physical objects—from roadways to pacemakers—are linked through wired and wireless networks, often using the same Internet Protocol (IP) that connects the Internet. These networks churn out huge volumes of data that flow to computers for analysis.

[What is the Internet of Things, and how does it work?](#)

"Simply, the Internet of Things is made up of devices - from simple sensors to smartphones and

wearables - connected together," Matthew Evans, the IoT programme head at techUK, says.

[Internet of things - Wikipedia](#)

What is the Internet of Things? In a nutshell, the Internet of Things is the concept of connecting any device (so long as it has an on/off switch) to the Internet and to other connected devices. The IoT is a giant network of connected things and people - all of which collect and share data about the way they are used and about the environment around them.

A Simple Explanation Of 'The Internet Of Things'

The Internet of Toys are toys that connect to the internet. Similar to the Internet of Things, these toys can be controlled using a smartphone app, voice commands or using a Bluetooth connection. Connected toys are different from other toys because they collect, use, and share data via the internet. Examples of the Internet of Toys include: Connected action figures and dolls, robotic toys such as drones, and learning development toys that aim to teach children a new skill. What are the risks ...

What is IoT (Internet of Things) and How Does it Work?

The Internet of Things is made up of devices, whether it's smartphones and tablets, connected cars, or wearable tools. When you combine these devices with automated systems, artificial intelligence, and the cloud, it's possible to gather, analyse, and use data in a range of new and exciting ways. The internet of things, or IoT, is a system of interrelated computing devices, mechanical and digital machines, objects, animals or people that are provided with unique identifiers and the ability to transfer data over a network without requiring human-to-human or human-to-computer interaction.
