 -A memoir- I have cancer! Now what? Living on the beautiful Caribbean island of Curaçao, at twenty-seven years old, that was the question I had to ask myself. Out of the blue, I was hit with a life-changing diagnosis and as my "normal" life stood still, I hopped on the scariest roller coaster of my life. I invite you to join me on this ride and read inside my mind. The mind of an optimist-the glass-half-full-of-sarcasm kind. While the experience was bumpy and lumpy, it was also filled with epiphanies, cancer perks, friendship, family, gratitude, and hope. So, at definite risk of sounding

like a Hallmark card, this is not a story of tragedy, instead it is one of triumph. This is a book about learning the hard life lessons and coming out of it more positive, empowered, and resilient than before. Better and balder\* through it all.\*okay maybe that was just me.

"Human-Computer Interaction and Management Information Systems: Foundations" offers state-of-the-art research by a distinguished set of authors who span the MIS and HCI fields. The original chapters provide authoritative commentaries and in-depth descriptions of research programs that will guide 21st century scholars, graduate students, and industry professionals. Human-Computer Interaction (or Human Factors) in MIS is concerned with the ways humans interact with information, technologies, and tasks, especially in business, managerial, organizational, and cultural contexts. It is distinctive in many ways when compared with HCI studies in other disciplines. The MIS perspective affords special importance to managerial and organizational contexts by focusing on analysis of tasks and outcomes at a level that considers organizational effectiveness. With the recent advancement of technologies and development of many sophisticated applications, human-centeredness in MIS has become more critical than ever before. This book focuses on the basics of HCI, with emphasis on concepts, issues, theories, and models that are related to understanding human tasks, and the interactions among humans, tasks, information, and technologies in organizational contexts in general.
