TORRES ANGELINA

Asterix and the Great Crossing Routledge

Nicht nur wir Deutsche lieben den kleinen frechen Gallier und seinen dicken ("Nein, ich bin nicht dick!"? Freund Obelix: Asterix' Abenteuer wurden in unzählige Sprachen und Dialekte übersetzt und jeweils in den nationalen Kontext eingebettet. Mal sehr frei, manchmal wirklich genial. Man denke nur an die Namen, auch wenn es Methusalix schlimmer hätte treffen können: In Finnland wurde er zu Senilix, in den USA zu Arthritix. Jörg Fündling schildert die Geschichte des Comics, porträtiert Texter, Zeichner und Übersetzer und zeigt, welches Echo die einzelnen Bände hervorgerufen haben, welche wir besonders gerne lesen – und warum zum Beispiel Asterix bei den Goten gerade nicht. Eindrucksvoll beleuchtet der Althistoriker, wie sich die Antike in Asterix spiegelt und wie einzelne politische Ereignisse oder auch Charaktere – antike wie zeitgenössische – im Comic verarbeitet wurden.

Theme park studies is a growing field in social and cultural studies. Nonetheless, until now little attention has been dedicated to the choice of the themes represented in the parks and the strategies of their representation. This is particularly interesting when the theme is a historical one, for example ancient Greece. Which elements of classical Greece find their way into a theme park and how are they chosen and represented? What is the "entertainment" element in ancient Greek history, culture and myth, which allows its presence in commercial structures aiming to people's fun? How does the representation of Greece change against different cultural backgrounds, e.g. in different European countries, in the USA, in China? This book frames a discussion of these representations within the current debates about immersive spaces, uses of history and postmodern aesthetics, and analyses how ancient Greece has been represented and made "enjoyable" in seven different theme parks across the world, providing an original and ground-breaking contribution to theme park studies and classical reception.

Comics are a pervasive art form and an intrinsic part of the cultural fabric of most countries. And yet, relatively little has been written on the translation of comics. Comics in Translation attempts to address this gap in the literature and to offer the first and most comprehensive account of various aspects of a diverse range of social practices subsumed under the label 'comics'. Focusing on the role played by translation in shaping graphic narratives that appear in various formats, different

contributors examine various aspects of this popular phenomenon. Topics covered include the impact of globalization and localization processes on the ways in which translated comics are embedded in cultures; the import of editorial and publishing practices; textual strategies adopted in translating comics, including the translation of culture- and language-specific features; and the interplay between visual and verbal messages. Comics in translation examines comics that originate in different cultures, belong to quite different genres, and are aimed at readers of different age groups and cultural backgrounds, from Disney comics to Art Spiegelman's Maus, from Katsuhiro Ōtomo's Akira to Goscinny and Uderzo's Astérix. The contributions are based on first-hand research and exemplify a wide range of approaches. Languages covered include English, Italian, Spanish, Arabic, French, German, Japanese and Inuit. The volume features illustrations from the works discussed and an extensive annotated bibliography. Contributors include: Raffaella Baccolini, Nadine Celotti, Adele D'Arcangelo, Catherine Delesse, Elena Di Giovanni, Heike Elisabeth Jüngst, Valerio Rota, Carmen Valero-Garcés, Federico Zanettin and Jehan Zitawi.

The Complete Guide to Asterix Papercutz

Derived from the renowned multi-volume International Encyclopaedia of Laws, this practical analysis of competition law and its interpretation in Austria covers every aspect of the subject - the various forms of restrictive agreements and abuse of dominance prohibited by law and the rules on merger control; tests of illegality; filing obligations; administrative investigation and enforcement procedures; civil remedies and criminal penalties; and raising challenges to administrative decisions. Lawyers who handle transnational commercial transactions will appreciate the explanation of fundamental differences in procedure from one legal system to another, as well as the international aspects of competition law. Throughout the book, the treatment emphasizes enforcement, with relevant cases analysed where appropriate. An informative introductory chapter provides detailed information on the economic, legal, and historical background, including national and international sources, scope of application, an overview of substantive provisions and main notions, and a comprehensive description of the enforcement system including private enforcement. The book proceeds to a detailed analysis of substantive prohibitions, including cartels and other horizontal agreements, vertical restraints, the various types of abusive conduct by the dominant firms and the appraisal of concentrations, and then goes on to the administrative enforcement of competition law, with a focus on the antitrust authorities' powers of investigation and the right of defence of suspected companies. This part also covers voluntary merger notifications and clearance decisions, as well as a description of the judicial review of administrative decisions. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable time-saving tool for business and legal professionals alike. Lawyers representing parties with interests in Austria will welcome this very useful guide, and academics and researchers will appreciate its value in the study of international and comparative competition law.

The first course of the International School on Physics with Low Energy Antiprotons was held in Erice, Sicily at the Ettore Majorana Centre for Scientific Culture, from September 26 to October 3, 1986.

The purpose of this School is to review the physics accessible to experiments using low energy antiprotons, in view of the new era of the CERN LEAR ring opened by the upgrade of the antiproton source at CERN (ACOL). In 1986 the first course covered topics related to fundamental symmetries. These Proceedings contain both the tutorial lectures and the various contributions presented during the School by the participants. The contributions have been organized in six sections. The first section is devoted to gravitation, a particularly "hot" topic in view of recent speculations about deviations from Newton's and Einstein's theories. Section II covers various problems related to the matter-antimatter symmetries such as comparison of the proton and antiproton, inertial masses or spectroscopy of antihydrogen or other antiprotonic atoms. CP and CPT violations in weak interaction are presented in Section III. The test of symmetries in atomic physics experiments and the strong CP problem are covered in Section IV. Section V groups contributions related to high precision measurements of simple systems like protonium, muonium or the anomalous moment of the muon. The last section is devoted to the experimental challenge of polarizing antiproton beams.
