Answering six

mark
questions in
your GCSE is
much more
than just
writing down
six correct
things. There
is a skill to
answering
them that
needs to be
practiced.
Here I have
written 25
questions on
each subject,
given you the
answers and
guided you
through how
to answer to
get full marks.
The more you
practice, the
more

confident
you'll be in the
exam!

he aim of this book is to provide a comprehensive and accessible text for students, covering Papers 1 and 2 in the latest OCR GCSE J277 Computer

Science specification. It will be invaluable as a course text for students throughout the course. It is divided into eight sections, each broken down into manageable chapters of roughly one lesson. Sections 6 and 7 of the textbook cover algorithms and programming fundamentals with a theoretical approach to provide students with experience of writing, tracing and

debugging pseudocode solutions without the aid of a computer. These sections would complement practical programming experience. Each of the eight sections cover one of the major topics in this course, and each subtopic contains sample examination questions from past papers, which can be set as homework.
