The neuro rehab text that mirrors how you learn and how you practice! Take an evidence-based approach to the neurorehabilitation of adult and pediatric patients across the lifespan that reflects the APTA's patient management model and the WHO's International Classification of Function (ICF). You'll study examination and interventions from the body structure/function impairments and functional activity limitations commonly encountered in patients with neurologic disorders. This book provides unique views on assessing and treating motor, cognitive, balance, and swallowing problems after neurological diseases, especially for the elderly. It shows that brain emotion and motor control networks are tightly integrated via the cingulate motor cortex and other hubs, and introduces how the brain, brainstem, and spinal cord work together to form a big central pattern generator (CPG) to control human walking.

The book also highlights the core of motor training for stroke patients, that is, how to build a rational mode to exert force, and introduces a brief tool for assessing cognitive function. It also shows how to assess fall risks in community-dwelling elderly people, and introduces a sequential water swallowing test, a special protocol of FEES, and the oropharyngeal electrical-vibration stimulation to improve swallow function.

The phrase Sports Medicine is not specific to one career/profession. It instead, encompasses a group of professionals from various disciplines whose focus is the health of an athlete. Athletes can be all ages and play on all different levels. A person interested in becoming an orthopedic sports medicine specialist must complete four years of medical school. After their undergraduate schooling is completed, training continues with a five-year residency in orthopedics. In order to sub-specialize, which is the case with an orthopedic sports medicine, another two to four years of training is required. This book is a practical guide to the field of sports science and the treatment of sports

injuries. Written for students in sports science and medicine, trainees and specialists in sports medicine and related disciplines. The book presents the clinical management of both acute and chronic sports injuries and medical problems alongside the background and basic science of sports medicine. Hopefully the present book will be useful for the students of physical education and sports sciences and other related courses.
