Here is a major work by a Chilean poet thought by many to be the most brilliant and important new voice in the Spanish language. In its first American edition, this poetry is presented in Spanish and English, so that readers of both languages

may be listed to Zurita's voice. Anteparadise can be read as a creative response, an act of resistance by a young artist to the violence and suffering during and after the 1973 coup that toppled the democratically elected Allende government. Zurita thus follows the example of several Latin American poets such as the Peruvian César Vallejo and Chilean Nobel laureate Pablo Neruda, sharing their passion and urgency, but his voice is unique. *The Caring Class* John Wiley & Sons
El uso inadecuado de los antibióticos ha

comportado un nuevo y muy grave problema de salud pública: la aparición de bacterias multirresistentes (las llamadas «superbacterias»), causantes de infecciones difíciles de tratar y con un alto coste para la sociedad, que se ha visto acrecentado por la pandemia del Covid-19. Ahora más que nunca, es necesario amplio conocimiento y rigor científico sobre el valor de los antibióticos y la resistencia a los mismos. Este libro de Raquel Carnero y Luis Marcos, con un estilo ameno y las ilustraciones llenas de humor de Íñigo

Ansola, divulga para el público general el conocimiento actual sobre las bacterias, sus beneficios (que por supuesto los tienen y por eso debemos aprender a cuidar nuestra microbiota) y también sus perjuicios; expone los modos de combatir las infecciones, muestra el papel esencial de los antibióticos para lograrlo, y define los cambios necesarios para que dicho combate sea (o vuelva a ser) efectivo.

Blackness Without Ethnicity draws on fifteen years of his research in Bahia, Rio Suriname, and Amsterdam. Sansone uses his findings to explore the very different ways that race and ethnicity are constructed in Brazil and the rest of Latin America. He compares these Latin

American conceptions of race to dominate notions of race that are defined by a black-white polarity and clearly identifiable ethnicities, formulations he sees as highly influenced by the US and to a lesser degree Western Europe. Sansone argues that understanding more complex and ambiguous notions of culture and identity will expand the international discourse on race and move it away from American dominated notions that are not adequate to describe racial difference in other countries (and also in the countries where the notions originated). He also explores the effects of globalization on constructions of race.

From the winner of the first Lannan Prize for Cultural Freedom, a biting funny, kaleidoscopic vision of the first world through the eyes of the third Eduardo Galeano, author of the incomparable Memory of Fire Trilogy, combines a novelist's intensity, a poet's lyricism, a journalist's fearlessness, and the strong judgments of an engaged historian. Now his talents are richly displayed in Upside Down, an eloquent, passionate, sometimes hilarious exposé of our first-world

privileges and assumptions. In a series of lesson plans and a "program of study" about our beleaguered planet, Galeano takes the reader on a wild trip through the global looking glass. From a master class in "The Impunity of Power" to a seminar on "The Sacred Car"--with tips along the way on "How to Resist Useless Vices" and a declaration of "The Right to Rave"--he surveys a world unevenly divided between abundance and deprivation, carnival and torture, power and helplessness. We have accepted a reality we should reject, Galeano teaches us, one where machines are more precious than humans, people are hungry, poverty kills, and children toil from dark to dark. A work of fire and charm, Upside Down makes us see the world anew and even glimpse how it might be set right. "Galeano's outrage is tempered by intelligence, an ineradicable sense of humor, and hope." -Los Angeles Times, front page

Fundamental Genetics is a concise, non-traditional textbook that explains major topics of modern genetics in 42 mini-chapters. It is designed as a textbook for

an introductory general genetics course and is also a useful reference or refresher on basic genetics for professionals and students in health sciences and biological sciences. It is organized for ease of learning, beginning with molecular structures and progressing through molecular processes to population genetics and evolution. Students will find the short, focused chapters approachable and more easily digested than the long, more complex chapters of traditional genetics textbooks. Each chapter focuses on one topic, so that teachers and students can readily tailor the book to their needs by choosing a subset of chapters. The book is extensively illustrated throughout with clear and uncluttered diagrams that are simple enough to be reproduced by students. This unique textbook provides a compact alternative for introductory genetics courses.

Fundamental Genetics Mosby

Completely rewritten, updated, and expanded edition of the standard botany of the tuber-bearing solanums (potatoes), last revised in 1963. Describes more than 220 species of wild and cultivated potato,

giving full details of taxonomy, characteristics and range. Introductory chapters cover history, breeding and genetics, cytology and evolution, ecology and distribution, and detailed taxonomic descriptions. Lacks coverage only of the couch variety.  Accurate, reliable, objective, and comprehensive, Kaplan & Sadock's Synopsis of Psychiatry has long been the leading clinical psychiatric resource for clinicians, residents, students, and other health care professionals both in the US and worldwide. Now led by a new editorial team of Drs. Robert Boland and Marcia L. Verduin, it continues to offer a trusted overview of the entire field of psychiatry while bringing you up to date with current information on key topics and developments in this complex specialty. The twelfth edition has been completely reorganized to make it more useful and easier to navigate in today's busy clinical settings.

Global Dreams Simon and Schuster
 What really sets humankind apart from other species is our fondness of drugs.

This vale of tears, full of plants and animals to tame, was the breeding ground for cultures and civilizations with a penchant for developing the noble art of pharmacy. The Neolithic revolution marked the coming into being and development of great states and empires, with the consequential increase in headaches. But that was no big deal, since shamans, witch doctors, physicians, priests, apothecaries, and/or sorcerers sought, and sometimes found, remedies to relieve migraines and a wide range of ailments. After a taste of this Epic History of Pharmacy you'll doubtlessly feel better. You are holding a fully legal dose for a relaxing but at the same time frenzied trip: from the wild prehistoric Garden of Eden to the marmoreal and massive Rome, passing through Mesopotamia, Egypt, India, China, America, Persia and Greece. And all of it visually administered, in the form of a carefully formulated ointment of literary panacea seasoned with humor-coated pills of compressed cartoons.

Now in its third edition, this small and accessible guide contains essential information for the safe prescribing of the most commonly used drugs in the NHS. The Top 100 Drugs combines the best elements of a students' textbook with those of a prescribers' manual. It gives equal weight to essential information on the science of pharmacology as well as the real-world practicalities of prescribing, all in an accessible and clear format. Written by leaders in the field of clinical pharmacology, this popular book has been fully revised and updated to include the drugs used today, including monoclonal antibodies and antiviral drugs for COVID-19. With common indications, mechanism of action, adverse effects, important interactions and a clinical tip for each drug as well as questions to test knowledge, this book is key to helping students understand everything they need to know about the drugs they are likely to

use in practice. Compact and easy to follow - can be carried around on the wards Logically ordered - offers multiple ways to find the drug you are looking for A Clinical Tip for each drug, drawn from the authors' experience 100 self-assessment questions to encourage integration and revision of knowledge and understanding Fully updated to include the most commonly prescribed drugs today, based on original research led by the authors of over 1 billion community prescriptions and approximately 1 million hospital prescriptions All drug monographs extensively reviewed and updated Dedicated section emergency drugs Updated self-assessment material, now including calculation and prescription-writing questions, in addition to single-best-answer questions

Se discute mucho sobre la caída del Viejo Imperio romano: hay quien dice que se rompió la cadera antes y otros afirman en cambio, que se la fracturó después. Lo cierto que su vertebrada osamenta se hizo añicos señoriales por toda Europa. Todo un trauma en su momento. Nació la Edad

Media como todos, dolorida y sin memoria, pero poco a poco fue creciendo, llegando a la lozana época de la Universidad. Y aunque, ya talludita, casi se muere de peste, sobrevivió y acabó muriendo de escorbuto en mitad del Atlántico, ya en la ancianidad. Adéntrense en este mundo apasionante de bizantinos galenistas, musulmanes, aristotélicos, alambiques, jarabes y hospitales; de monasterios con botica, reliquias sin efectos secundarios y escuelas catedralicias. En el siglo XIII ya habían florecido de nuevo el comercio y las ciudades. Los burgueses eran profesionales variados entre los que había un espécimen muy importante y simpático: ¿el médico? ¡Qué va! El farmacéutico. Fue entonces cuando las dos profesiones se separaron formal y amistosamente.

La cultura peruana y la obra de los médicos en la emancipación Larousse
The number of elderly and disabled Americans in need of home health care is increasing annually, even as the pool of people—almost always women—willing to do this job gets smaller and smaller. The Caring Class takes readers inside the reality of home health care by following

the lives of women training and working as home health aides in the South Bronx. Richard Schweid examines home health care in detail, focusing on the women who tend to our elderly and disabled loved ones and how we fail to value their work. They are paid minimum wage so that we might be absent, getting on with our own lives. The book calls for a rethinking of home health care and explains why changes are urgent: the current system offers neither a good way to live nor a good way to die. By improving the job of home health aide, Schweid shows, we can reduce income inequality and create a pool of qualified, competent home health care providers who would contribute to the well-being of us all. The Caring Class also serves as a guide into the world of our home health care system. Nearly 50 million US families look after an elderly or disabled loved one. This book explains the issues and choices they face. Schweid explores the narratives, histories, and people behind home health care in the United States, examining how we might improve the lives of both those who receive care and those who provide it. *The Soils of Cuba* Yale University Press

Williams' Basic Nutrition & Diet Therapy is a market leader for a reason - it provides coverage of hot topics, emerging trends, and cutting edge research, plus all the essentials for providing the best nutrition care. You'll love it for the clear, conversational writing style and vivid illustrations that guide you from fundamental concepts of nutrition to the application of those concepts in clinical practice. UNIQUE! Content threads share features with other LPN/LVN titles from Elsevier for a consistent learning experience. Case studies in clinical care

chapters focus on related patient care problems. Critical thinking questions challenge you to analyze, apply, and combine concepts. Cultural Considerations boxes discuss how a patient's culture can affect nutritional concepts in practice. Clinical Applications and For Further Focus boxes highlight hot topics and analyze concepts and trends in depth. Chapter Challenges use true/false, multiple-choice, and matching questions to test your understanding of chapter content. Key concepts, key terms, and chapter summaries help you study more effectively and master essential content. Diet therapy guidelines include recommendations, restrictions, and sample diets for a number of major clinical conditions. Further Readings and Resources in each chapter provide focused and up-to-date print, multimedia, and online resources to supplement learning. Useful appendixes include information on cholesterol content, fiber content, cultural and religious dietary patterns, and more. NEW! Completely updated content incorporates Dietary Guidelines 2010 and Healthy People 2020 information throughout the text to ensure you have

the most up-to-date content available. NEW! Colorful and engaging design makes key content easy to find and more engaging with graphic artwork and vivid images of food. NEW! The early science of chemistry and microbiology were the source of most drugs until the revolution of genetic engineering in the mid 1970s. Then biotechnology made available novel protein agents such as interferons, blood factors and monoclonal antibodies that have changed the modern pharmacy. Over the past year, a new pharmacy of oligonucleotides has emerged from the science of gene expression such as RNA

splicing and RNA interference. The ability to design therapeutic agents from genomic sequences will transform treatment for many diseases. The science that created this advance and its future promise will be discussed. Phillip Allen Sharp is an American geneticist and molecular biologist who co-discovered RNA splicing. He shared the 1993 Nobel Prize in Physiology or Medicine with Richard J. Roberts for "the discovery that genes in eukaryotes are not contiguous strings but contain introns, and that the splicing of messenger RNA to delete those introns can occur in different ways, yielding different proteins from the same DNA sequence. He works in Institute Professor Koch Institute for Integrative Cancer Research, Massachusetts Institute of Technology (MIT), Cambridge, MA, US. Este libro recoge los resúmenes de la «Innovation in Pharmacy: Advances and Perspectives» que tuvo lugar en Salamanca (España) en septiembre de 2018. La ciencia primitiva de la química y la microbiología fue la fuente de la mayoría de las drogas hasta la revolución de la ingeniería genética a mediados de la década de 1970. Luego, la biotecnología

puso a disposición agentes proteínicos novedosos como interferones, factores sanguíneos y anticuerpos monoclonales que han cambiado la farmacia moderna. Durante el año pasado, surgió una nueva farmacia de oligonucleótidos a partir de la ciencia de la expresión génica, como el empalme de ARN y la interferencia de ARN. La capacidad de diseñar agentes terapéuticos a partir de secuencias genómicas transformará el tratamiento de muchas enfermedades. La ciencia que

creó este avance y su promesa futura será discutida. Phillip Allen Sharp es un genetista y biólogo molecular estadounidense que co-descubrió el empalme de ARN. Compartió el Premio Nobel de 1993 en Fisiología o Medicina con Richard J. Roberts por "el descubrimiento de que los genes en eucariotas no son cadenas contiguas, sino que contienen intrones, y que el empalme del ARN mensajero para eliminar esos

intrones puede ocurrir de diferentes maneras, produciendo diferentes proteínas de la misma secuencia de ADN. Trabaja en el Instituto Profesor Koch Institute for Integrative Cancer Research, Instituto Tecnológico de Massachusetts (MIT), Cambridge, MA, EE. UU.
