This contributed book is the first to focus on the Clinical Learning Environment and Supervision (CLES) framework. The origin instrument version of the CLES-scale has been published in Finland in 2002, and has generated wide European and International interest. The CLES network has pursued Europe-wide research. This book brings a unique perspective of students' clinical practicum in healthcare education and discusses how the national quality system can be used in the continual development of student supervisory systems. The book first presents the theoretical and practical principles of clinical learning, then defines the challenges of clinical learning for mentorship, clinical staff and nurse

teachers. This volume also offers examples of the benefits and future perspectives of the CLES framework in healthcare education. It is aimed at researchers and clinical professionals who contribute to students' clinical learning at universities and healthcare organisations. It is especially suitable as a learning tool for clinical staff mentorship training courses and master's level healthcare education studies.

This book is designed to guide social workers in their work as field instructors. It is unique in that it presents a conceptual system that unites social work theory taught in the classroom to actual practice in a variety of community settings. This system gives the field instructor a model to guide the student through a process that focuses attention on common elements of all social work practice situations. Many examples are presented to illustrate the application of this process. The Practice of Field Instruction in Social Work is an invaluable text for anyone preparing to become a field instructor, for current field instructors, and for faculty members responsible for field coordination. The information presented here is based on current research and

teaching experience. The model presented in the book has been used with success in undergraduate and graduate programs throughout Canada and other countries.

**Professional Nursing Concepts:
Competencies for Quality**

Leadership Jones & Bartlett Publishers
The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care

as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles—including limits on nurses' scope of practice—should be removed so that the

health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Teaching in Nursing Springer Nature Teaching, Learning and Research in Higher Education offers a combination of critical perspectives and practical advice that is ideally suited for individuals interested in enhancing their practice through analysis and critique. The aim is to promote a critical understanding of one's own practices: to foster personal and professional formation through a reflexive engagement with one's environment and circumstances. At a practical level this means to continuously think about how to adjust

practice rather than following a formulaic approach derived from any particular educational theory. Teaching, Learning and Research in Higher Education argues that academics can find space for their own agency in the midst of institutional policies and practices that serve to frame, as well as delimit and constrain, what counts as good academic work in teaching and research. This text bridges a gap between those books that provide a high-level analysis of contemporary higher education, the more practical texts on how to be a good teacher in higher education, and those texts which aim to improve teaching through better understanding of the learning process. Topical chapters include: Teacher-learner relationship, Learning groups,

Practice-oriented learning, Teaching for diversity, e-learning, Assessment, Approaches to Staff Development, Quality assurance, Supervision and Research education, Doing research, and Teaching & Research. A must-have resource for higher education professions, academic developers, professionals, and anyone looking to improve their teaching and learning practices, Teaching, Learning and Research in Higher Education is also appropriate for continuing and professional development courses in the UK and teaching and learning courses in the US. Mark Tennant is Dean of the University Graduate School, University of Technology, Sydney. Cathi McMullen is Lecturer in the School of Marketing and Management at Charles Sturt University.

Dan Kaczynski is Professor in the Educational Leadership department at Central Michigan University.

Criteria for the Evaluation of Practical Nursing Programs

Routledge

Although service-learning and nursing would seem an obvious combination, nursing, as a profession within

academic, research, and health-care organizations has only recently begun to embrace the true spirit of the practice. The chapters in this book, fourth in the Service-Learning in the Disciplines Series, are rich with information, both theoretical and experiential, that describes ways in which nursing has begun to incorporate service-learning as a methodology into many diverse settings and with communities of interest.

This report describes a preceptorship model that provides student nurses with clinical practice in rural health facilities. The development and implementation of a preceptorship model reflects a partnership between nursing education

and nursing service--between the urban nursing school and the rural hospital. A five-stage preceptorship model is presented that includes development of guidelines, selection of participants, orientation of participants, implementation, and evaluation. The model draws on a literature review plus feedback from nurse preceptors and graduating nursing students. The model emphasizes the importance of clearly stated purposes and objectives; guidelines outlining the roles and responsibilities of the student, the preceptor, and the faculty liaison; and careful selection and preparation of all participants. In spring 1992, 24 students completed their senior practicums in rural hospitals using the preceptorship model; all were satisfied with the

experience, met their clinical objectives, and completed their learning contracts. Evaluations of the model by the faculty liaison person, preceptors, and students resulted in 18 recommendations to improve implementation of the model. The strongest preceptor recommendation was that students and preceptors work identical hours with identical patient assignments. Contains 53 references. Appendices include preceptor questionnaire, terminal nursing competencies, agreement between nursing school and health care facility, form for assessing potential preceptors, and evaluation forms for students and preceptors.
