### Assessment and Intervention for English Language Learners Myself

As the United States continues to be a nation of immigrants and their children, the nation's school systems face increased enrollments of students whose primary language is not English. With the 2001 reauthorization of the Elementary and Secondary

Education Act (ESEA) in the No Child Left Behind Act (NCLB), the allocation of federal funds for programs to assist these students to be proficient in English became formula-based: 80 percent on the basis of the population of children with limited English proficiency<sup>1</sup> and 20 percent on the basis of the population of recently immigrated children and youth. Title III of NCLB directs the U.S. Department of Education to allocate funds on the basis of the more accurate of two allowable data sources: the number of students reported to the federal government by each state education agency or data from the American Community Survey (ACS). The department determined that the ACS estimates are more accurate, and since 2005, those data have been basis for the federal distribution of Title III funds. Subsequently, analyses of the two data sources have raised concerns about that decision, especially because the two allowable data sources would allocate quite different amounts to the states. In addition, while shortcomings were noted in the data provided by the states, the ACS estimates were shown to fluctuate between years, causing concern among the states about the unpredictability and unevenness of program funding. In this context, the U.S. Department of Education commissioned the National Research Council to address the accuracy of the estimates from the two data sources and the factors that influence the estimates. The resulting book also considers means of increasing the accuracy of the data sources or alternative data sources that could be used for allocation purposes.

### *Current Index to Journals in Education* Harper Collins

This book presents evidence-based practices for appropriate assessment of and school-based services for young English language learners. It identifies and addresses the challenges of assessing and intervening with these students at the curricular, instructional, environmental, and individual levels, particularly the complexities of determining the presence or absence of learning disabilities. Case studies and comparisons with fluent English speakers illustrate the screening and evaluation process - including multi-tier system of supports (MTSS) and response to intervention (RTI) - and proactive intervention planning in core literacy and math domains. Together, these chapters model

effective teaching practice, advocacy, and teamwork with parents and colleagues as well as policy development toward meeting the needs of this diverse student population. This invaluable guide: Examines challenges of data collection when working with English language learners. Traces the development of dual-language fluency and competence. Discusses language-acquisition issues affecting oral language assessment. Reviews commonly used assessment and intervention tools in use with English learners. Features specialized chapters relating to reading, writing, and mathematics competencies. Can be used regardless of first language spoken by students. Assessment and Intervention for English Language Learners is an essential resource for researchers, professionals, and graduate students in diverse fields including school and clinical child psychology; assessment, testing, and evaluation; language education; special education; and educational psychology.

### **Scott Foresman Reading** Guilford Press

Complex factors affect young children and their families in today's increasingly diverse world characterized by globalization, the transnational movement of people, and neo-liberal government policies in western and industrialized countries. This book focuses on three of these factors—culture, language and learning—and how they affect children's development and learning in the context of their communities, families and schools.

Taking an ecological perspective, it challenges normative and hegemonic views of young children's language, literacy and numeracy development and offers examples of demonstrated educational practices that acknowledge and build on the knowledge that children develop and learn in culturally specific ways in their homes and communities. The authors highlight issues and perspectives that are particular to Indigenous people who have been subjected to centuries of assimilationist and colonialist policies and practices, and the importance of first or home language maintenance and its cognitive, cultural, economic, psychological and social benefits. It is well known that the number of non-English speakers is on the rise in the United States. What is less well known is that the largest proportion of this population is children under the age of 5. These young English language learners (ELLs) often demonstrate achievement gaps in basic math and reading skills when they start school. How best to educate this important and growing preschool population is a pressing concern for policymakers and practitioners. The chapters in this important book provide up-to-date syntheses of the research base for young ELLs on critical topics such as demographics, development of bilingualism, cognitive and neurological benefits of bilingualism, and family relationships, as well as classroom, assessment, and teacher-preparation practices. Contributors: Linda M. Espinosa, Margaret Freedson, Claudia Galindo, Fred Genesee, Donald J. Hernandez, José E. Náñez Sr., and Flora V. Rodríguez-Brown "This is a must-have for those who are working directly or indirectly with young English language learners." —Olivia Saracho, University of Maryland, College Park, Maryland
