 Drug Discovery and Evaluation has become a more and more difficult, expensive and time-consuming process. The effect of a new compound has to be detected by in vitro and in vivo methods of pharmacology. The activity spectrum and the potency compared to existing drugs have to be determined. As these processes can be divided up stepwise we have designed a book series "Drug Discovery and Evaluation" in the form of a recommendation document. The methods to detect drug targets are described in the first volume of this series "Pharmacological Assays" comprising classical methods as well as new

technologies. Before going to man, the most suitable compound has to be selected by pharmacokinetic studies and experiments in toxicology. These preclinical methods are described in the second volume „Safety and Pharmacokinetic Assays". Only then are first studies in human beings allowed. Special rules are established for Phase I studies. Clinical pharmacokinetics are performed in parallel with human studies on tolerability and therapeutic effects. Special studies according to various populations and different therapeutic indications are necessary. These items are covered in the third volume: „Methods in Clinical Pharmacology".

As a field, men's health is far behind women's health in terms of the availability of reliable, scientifically based information that men, their partners, and health care providers can rely on when seeking information and treatment. Moreover, integrative approaches are becoming more popular with men whose healthcare providers understand that most of the leading causes of morbidity and mortality in men, including cardiovascular disease, cancer, urologic disease, and sexual dysfunction, can be ameliorated using an integrative approach, with more emphasis on the patient-provider relationship, lifestyle change, and the use of proven complementary modalities. Integrative Men's Health provides an evidence-based perspective on the health problems that affect men and the ways in which such problems may be prevented or treated utilizing a broad armamentarium of approaches - from conventional tools to complementary modalities. All chapters take into consideration of all the factors that influence men's health including body, mind, and spirit in a way that neither rejects alternative approaches nor accepts any of them uncritically.

Integrative Cardiology is an exploration of a new and much-needed perspective in cardiac care: the intelligent synthesis of conventional medicine with alternative approaches not typically part of Western medical curriculum. More than a blending of two approaches, this new perspective in cardiology highlights specific gaps in conventional heart care, and examines how alternative approaches may be ideally suited to address these missed opportunities. Cardiology is an ideal specialty for an integrative approach. Heart disease is largely preventable. The influence of nutrition, physical activity, metabolic factors, and emotional state on heart health is unmistakable, and the wide-angle lens of integrative medicine is an ideal model to address these multifaceted needs. Most importantly, the focus of this work is directed at prevention. The approaches described in this book emphasize collaboration of the patient and health care provider--both seeking to obtain the best possible outcome taking into account the intangible, but vital, nuances of the patient's culture, beliefs, and preferences. The first section in this book describes the core elements of integrative cardiology, beginning with nutrition. Foundational chapters that follow include exercise, botanicals, aspirin, metabolic cardiology, acupuncture, spirituality, mind/body approaches, and energy medicine. Contributing authors, all of whom have a background in academic medicine, share the approaches they have found most effective in their own practices, referencing their work with the best scientific evidence available.

Dementia, Parkinson's Disease, headache, and neuropathy are all conditions for which narrowly focused medical interventions all too often fall short. The first book in its field, Integrative Neurology synthesizes complementary modalities with state-of-the-art medical treatment to offer a new vision for neurological care. The authors begin by looking inward at the crisis of stress and burnout that confronts all of medicine, but neurology in particular. It goes on to provide a selective yet in-depth review of important topics in neurological practice from the perspective of integrative medicine. Taking an evidence based approach throughout, chapters cover chronic diseases such as Multiple Sclerosis, Dementia, and Parkinson's Disease. The volume also address clinical issues such as headache, traumatic brain injury, navigating the endocannabinoid system and aging, nutrition and stroke, neuropathy, toxins and neurodevelopment, as well as the modalities of Ayurvedic Medicine and acupuncture. Integrative medicine is defined as a healing-oriented medicine that takes account of the whole person (body, mind, and spirit) as well as all aspects of lifestyle. It emphasizes the therapeutic relationship and makes use of appropriate therapies, both conventional and alternative. Series editor Andrew Weil, MD is Professor and Director of the Arizona Center for Integrative Medicine at the University of Arizona. Dr. Weil's program was the first such academic program in the US, and its stated goal is "to combine the best ideas and practice of conventional and alternative medicine into cost effective treatments without embracing alternative practices uncritically."

Integrative Addiction and Recovery offers an authentic model of comprehensive integrative modalities germane and specific to the field of addiction and recovery treatment. Although many treatment services for addiction include "holistic," "alternative," or "integrative" in their descriptions, they contain no substantive programs or services consistent with the mind, body, spirit paradigm contained within the integrative approach to health and healing. Consequently, many patients do not have the opportunity to benefit from the true spirit of an integrative approach within the discipline of addiction and recovery medicine. This book sets the standard for a bona fide integrative approach for others to follow, providing information that is immediately useful in clinical practice and rigorously evidence-based. Authored by world-class experts in the field of addiction medicine, Integrative Addiction and Recovery presents both scientific and

holistic data regarding a wide variety of holistic and conventional approaches to the treatment of substance abuse and behavioral addictions. Its chapters cover both conventional and holistic treatment and provide background for each of the major classes of drugs of abuse, including opiates, alcohol, tobacco, stimulants, sedative-hypnotics, hallucinogens and marijuana. It also includes chapters on the topics of food addiction and behavioral addictions such as gambling and shopping. The authors explore the major holistic modalities, providing background and theory in areas like acupuncture, Traditional Chinese Medicine, Homeopathy, Aromatherapy, and Ayurvedic Medicine, while at the same time providing spiritual approach chapters on Shamanism and Ibogaine, as well as more conventional issues with a holistic view including Co-Occurring Disorders and Psychosocial Treatment, and Group Support. The very complex issue of chronic pain and addiction is also addressed, along with relapse prevention strategies.
