Detailed plans for helping
elementary students
experience deep
mathematical learning Do
you work tirelessly to
make your math lessons
meaningful, challenging,
accessible, and engaging?
Do you spend hours you
don't have searching for,
adapting, and creating

tasks to provide rich
experiences for your
students that supplement
your mathematics
curriculum? Help has
arrived! Classroom Ready-
Rich Math Tasks for
Grades 4-5 details more
than 50 research- and
standards-aligned, high-
cognitive-demand tasks
that will have your

students doing deep-problem-based learning. These ready-to-implement, engaging tasks connect skills, concepts and practices, while encouraging students to reason, problem-solve, discuss, explore multiple solution pathways, connect multiple representations, and justify their thinking. They help students monitor their own thinking and connect the mathematics they know to new situations. In other words, these tasks allow students to truly do

mathematics! Written with a strengths-based lens and an attentiveness to all students, this guide includes:

- Complete task-based lessons, referencing mathematics standards and practices, vocabulary, and materials
- Downloadable planning tools, student resource pages, and thoughtful questions, and formative assessment prompts
- Guidance on preparing, launching, facilitating, and reflecting on each task
- Notes on access and equity, focusing on students' strengths,

productive struggle, and distance or alternative learning environments. With concluding guidance on adapting or creating additional rich tasks for your students, this guide will help you give all of your students the deepest, most enriching and engaging mathematics learning experience possible.

These bold, bright flash cards are a great way to help children learn their times tables. Children can write their answers with the special pen provided, then wipe clean and repeat. Cards are colour-coded to help children find a particular table, and the cards can be shuffled and selected randomly as children's confidence grows. 132 cards include

all the times tables up to 12x12. Opportunities to see, say, hear and write times tables appeal to a range of learning styles. Comes with a special wipe-clean pen that is easy to wipe off the shiny cards.

Mental calculations and estimations are basic, everyday skills that are essential for real-life arithmetic operations and number sense. This book presents a much needed overview and analysis of

mental computation and estimation, drawing on contemporary research and empirical studies that were conducted on students, teachers and adults to cover all aspects of this complex field.

Mental Computation and Estimation analyses the implications that are involved in the research, teaching and learning of mathematics and delivers effective practices that will enhance everyday learning for students. Focusing on a range of international research and studies from the School of

Nature and Life Mathematics in Greece, it answers a number of important questions including: What mental calculations and estimations are, why they are important and what other mathematical concepts and cognitive behaviors are they related to? What strategies are used on mental additions, subtractions, multiplications and divisions and how are multiplication tables learned? What are the new trends in the teaching of mental

calculation and estimation? An invaluable resource for all those involved in the practice and research of mathematics education, Mental Computation and Estimation will also be a useful tool for researchers, policy makers and developers of educational programs.

Magazine Math Games/Fun To Teach
This book assembles into one volume summaries of school-based intervention research that relates to those who deal on a

regular basis with the growing body of students having high-incidence learning disabilities and/or behavior disorders: special educators, school psychologists, and clinical child psychologists. Chapter authors begin with an overview of their topic followed by a brief section on historical perspectives before moving on to the main section – a critical discussion of empirically based intervention procedures. In those instances where evidence-based

prescriptions can legitimately be made, authors discuss best practices and the conditions (e.g., classroom environment, teacher expertise) under which these practices are most effective. A final section deals with policy issues.

The most up-to-date and comprehensive vital resource for educators seeking ADD/ADHD-supportive methods *How to Reach and Teach Children and Teens with ADD/ADHD, Third Edition* is an essential guide for school personnel.

Approximately 10 percent of school-aged children have ADD/ADHD—that is at least two students in every classroom. Without support and appropriate

intervention, many of these students will suffer academically and socially, leaving them at risk for a variety of negative outcomes. This book serves as a comprehensive guide to understand and manage ADHD: utilizing educational methods, techniques, and accommodations to help children and teens sidestep their weaknesses and showcase their numerous strengths. This new 2016 edition has been completely updated with the latest information

about ADHD, research-validated treatments, educational laws, executive function, and subject-specific strategies. It also includes powerful case studies, intervention plans, valuable resources, and a variety of management tools to improve the academic and behavioral performance of students from kindergarten through high-school. From learning and behavioral techniques to whole group and individualized interventions, this indispensable guide is a

must-have resource for every classroom—providing expert tips and strategies on reaching kids with ADHD, getting through, and bringing out their best. Prevent behavioral problems in the classroom and other school settings Increase students' on-task behavior, work production, and academic performance Effectively manage challenging behaviors related to ADHD Improve executive function-related skills (organization, memory, time management) Apply

specific research-based supports and interventions to enable school success Communicate and collaborate effectively with parents, physicians, and agencies
The Student
The methods outlined in this guide offer teachers a variety of ways to stimulate interest, enhance concentration, increase understanding, and improve memory in their students. Chapter 1 discusses the LEARN (Learning Efficiently And Remembering

Mnemonics) system, a set of strategies that help students use a variety of processing styles to a greater advantage, and the 4M and VIP system, a set of strategies that incorporate Mnemonics, Metaphors, Mind maps, and Music; and Visual strategies, Imagery, and Positive suggestions. Chapter 2 provides an overview of visualization, its role in learning, and how it is used in these systems. Chapter 3 discusses Memory Foundations for Multiplication (MFM), a

multiplication system using mnemonics. Chapter 4 presents finger multiplication systems, and chapter 5 discusses several different patterns and strategies to help students with spelling. Chapter 6 presents reading, science, and social studies mnemonics. Chapter 7 discusses strategies for developing and using metaphors and other associative techniques. Chapter 8 covers an organizational technique called mind mapping, and chapter 9 presents ideas and

teaching suggestions for using music to enhance learning. Visual strategies are discussed in chapter 10, and imagery techniques are presented in chapter 11. Chapter 12 covers positive suggestions, including relaxation techniques and positive self-talk. Contains 74 references. (TJQ) *Methods, Aids and Devices for Teachers ... The Student* by Watson W.
