Transatlantic Relations at Stake Oxford University Press

This book is the inaugural volume in the new Springer series on Learning and Analytics in Intelligent Systems. The series aims at providing, in hard-copy and soft-copy form, books on all aspects of learning, analytics, advanced intelligent systems and related technologies. These disciplines are strongly related and mutually complementary; accordingly, the new series encourages an integrated approach to themes and topics in these disciplines, which will result in significant cross-fertilization, research advances and new knowledge creation. To maximize the dissemination of research findings, the series will publish edited books, monographs, handbooks, textbooks and conference proceedings. This book is intended for professors, researchers, scientists, engineers and students. An extensive list of references at the end of each chapter allows readers to probe further into those application areas that interest them most.

The Jevons Paradox and the Myth of Resource Efficiency Improvements BRILL

"This splendid work of scholarship . . . sums up with economy and power all that the written record so far deciphered has to tell about the ancient and complementary civilizations of Babylon and Assyria."—Edward B. Garside, *New York Times Book Review Ancient Mesopotamia—the area now called Iraq—has received less attention than ancient Egypt and other long-extinct and more spectacular civilizations. But*

numerous small clay tablets buried in the desert soil for thousands of years make it possible for us to know more about the people of ancient Mesopotamia than any other land in the early Near East. Professor Oppenheim, who studied these tablets for more than thirty years, used his intimate knowledge of long-dead languages to put together a distinctively personal picture of the Mesopotamians of some three thousand years ago. Following Oppenheim's death, Erica Reiner used the author's outline to complete the revisions he had begun. "To any serious student of Mesopotamian civilization, this is one of the most valuable books ever written."—Leonard Cottrell, *Book Week* "Leo Oppenheim has made a bold, brave, pioneering attempt to present a synthesis of the vast mass of philological and archaeological data that have accumulated over the past hundred years in the field of Assyriological research."—Samuel Noah Kramer, *Archaeology* A. Leo Oppenheim, one of the most distinguished Assyriologists of our time, was editor in charge of the *Assyrian Dictionary of the Oriental Institute* and John A. Wilson Professor of Oriental Studies at the University of Chicago.

In the year 2001, Prof. Dr. Ursula Kües was appointed at the Faculty of Forest Sciences and Forest Ecology of the Georg-August-University Göttingen to the chair Molecular Wood Biotechnology endowed by the Deutsche Bundesstiftung Umwelt (DBU). Her group studies higher fungi in basic and applied research. Research foci are on mushroom development and on fungal enzymes degrading wood and their applications in wood biotechnology. This

book has been edited to thank the DBU for all support given to the chair Molecular Wood Biotechnology. Contributions to the book are from scientists from Göttingen recognised in different fields of forestry and wood science. Chapters presented by members of the group Molecular Wood Biotechnology introduces into their areas of research. The book is designed for interested students of wood biology and wood technology but will also address scientists in the field.

Written by the author of the best-selling HyperText & HyperMedia, this book is an excellent guide to the methods of usability engineering. The book provides the tools needed to avoid usability surprises and improve product quality. Step-by-step information on which method to use at various stages during the development lifecycle are included, along with detailed information on how to run a usability test and the unique issues relating to international usability.* Emphasizes cost-effective methods that developers can implement immediately* Instructs readers about which methods to use when, throughout the development lifecycle, which ultimately helps in cost-benefit analysis. * Shows readers how to avoid the four most frequently listed reasons for delay in software projects.* Includes detailed information on how to run a usability test.* Covers unique issues of international usability.* Features an extensive bibliography allowing readers to find additional information.* Written by an internationally renowned expert in the field and the author of the best-selling HyperText & HyperMedia.

elektrophysiologische Untersuchung (EPU) ist sowohl als Nachschlagewerk als auch zur Unterstützung bei der Einarbeitung des Assistenzpersonals und junger Ärzte im EPU-Labor konzipiert. Sie führt den Leser in verständlicher Sprache und mit vielen farbigen Abbildungen - insbesondere anhand zahlreicher EKG-Beispiele - schrittweise an die einzelnen Komponenten einer elektrophysiologischen Untersuchung heran. Das Buch vermittelt Praxistipps zu allen gängigen Methoden einschließlich der kurativen Katheterablation. Kapitel zu den technischen und personellen Voraussetzungen im EPU-Labor sowie wichtigen Gesetzen, Verordnungen und Leitlinien runden die Information ab. Dieser Leitfaden bietet damit dem Assistenzpersonal die Möglichkeit, sich das notwendige Wissen anzueignen, um die diagnostischen und therapeutischen Eingriffe im EPU-Labor optimal vorbereiten und durchführen zu können.

Ancient Mesopotamia Saint-Paul
Nazi Germany and Southern Europe, 1933-45 is about transnational fascist discourse. It addresses the cultural and scientific links between Nazi Germany and Southern Europe focusing on a hybrid international environment and an intricate set of objects that include individual, social, cultural or scientific networks and events.

Using Southeast Asia as an example, this book tests theory about the relation between modernity, nationalism, and ethnic identity. The author develops his own typology to better fit the formation of political identities such as the Indonesian, Malay, Chinese, Acehnese, Batak and Kadazan.

Spaces of Experience Steinkopff

This pertinent and highly original volume explores how ideas of Europe and processes of continental political, socio-economic, and cultural integration have been intertwined since the nineteenth century. Applying a wider definition of Europeanization in the sense of "becoming European", it will pay equal attention to counter-processes of

disentanglement and disintegration that have accompanied, slowed down, or displaced such trends and developments. By focusing on the practices, agents, and experience of Europeanization, the volume strives to bring together the history of ideas and the history of human actions and conduct, two approaches that are usually treated separately in the field of European studies.

The art world is tough, the rules are a mystery, and only the lucky few make money' - so how can galleries succeed? What makes a commercial art gallery successful? How do galleries get their marketing right? Which potential customer group is the most attractive? How best should galleries approach new markets while still serving their existing audiences? Based on the results of an anonymous survey sent to 8,000 art dealers in the US, UK, and Germany, Magnus Resch's insightful examination of the business of selling art is a compelling read that is both aspirational and practical in its approach.

Reconsidering Europeanization

Springer

Winner of the EDRA book prize for 2012. In cities around the world, individuals and groups are reclaiming and creating urban sites, temporary spaces and informal gathering places. These 'insurgent public spaces' challenge conventional views of how urban areas are defined and used, and how they can transform the city environment. No longer confined to traditional public areas like neighbourhood parks and public plazas, these guerrilla spaces express the alternative social and spatial relationships in our changing cities. With nearly twenty illustrated case studies, this volume shows how instances of insurgent public space occur across the world. Examples range from community gardening in Seattle and Los Angeles, street dancing in Beijing, to the transformation of parking spaces into temporary parks in San Francisco. Drawing on the experiences and knowledge of individuals extensively

engaged in the actual implementation of these spaces, Insurgent Public Space is a unique cross-disciplinary approach to the study of public space use, and how it is utilized in the contemporary, urban world. Appealing to professionals and students in both urban studies and more social courses, Hou has brought together valuable commentaries on an area of urbanism which has, up until now, been largely ignored.

Various disciplines that deal with Achaemenid rule offer starkly different assessments of Persian kingship. While Assyriologists treat Cyrus's heirs as legitimate successors of the Babylonian kings, biblical scholars often speak of a "kingless era" in which the priesthood took over the function of the Davidic monarch. Egyptologists see their land as uniquely independently minded despite conquests, while Hellenistic scholarship tends to evaluate the interface between Hellenism and native traditions without reference to the previous two centuries of Persian rule. This volume brings together in dialogue a broad array of scholars with the goal of seeking a broader context for assessing Persian kingship through the anthropological concept of political memory.

Over the last few years, Linux has grown both as an operating system and a tool for personal and business use.

Simultaneously becoming more user friendly and more powerful as a back-end system, Linux has achieved new plateaus: the newer filesystems have solidified, new commands and tools have appeared and become standard, and the desktop--including new desktop environments--have proved to be viable,

stable, and readily accessible to even those who don't consider themselves computer gurus. Whether you're using Linux for personal software projects, for a small office or home office (often termed the SOHO environment), to provide services to a small group of colleagues, or to administer a site responsible for millions of email and web connections each day, you need quick access to information on a wide range of tools. This book covers all aspects of administering and making effective use of Linux systems. Among its topics are booting, package management, and revision control. But foremost in Linux in a Nutshell are the utilities and commands that make Linux one of the most powerful and flexible systems available. Now in its fifth edition, Linux in a Nutshell brings users up-to-date with the current state of Linux. Considered by many to be the most complete and authoritative command reference for Linux available, the book covers all substantial user, programming, administration, and networking commands for the most common Linux distributions. Comprehensive but concise, the fifth edition has been updated to cover new features of major Linux distributions. Configuration information for the rapidly growing commercial network services and community update services is one of the subjects covered for the first time. But that's just the beginning. The book covers editors, shells, and LILO and GRUB boot options. There's also coverage of Apache, Samba, Postfix, sendmail, CVS, Subversion, Emacs, vi, sed, gawk, and much more. Everything that system administrators, developers, and power users need to know about Linux is referenced here, and they will turn to this book again and again.

The Jevons Paradox, which was first expressed in 1865 by William Stanley Jevons in relation to use of coal, states that an increase in efficiency in using a resource leads to increased use of that resource rather than to a reduction. This has subsequently been proved to apply not just to fossil fuels, but other resource use scenarios. For example, doubling the efficiency of food production per hectare over the last 50 years (due to the Green Revolution) did not solve the problem of hunger. The increase in efficiency increased production and worsened hunger because of the resulting increase in population. The implications of this in today's world are substantial. Many scientists and policymakers argue that future technological innovations will reduce consumption of resources; the Jevons Paradox explains why this may be a false hope. This is the first book to provide a historical overview of the Jevons Paradox, provide evidence for its existence and apply it to complex systems. Written and edited by world experts in the fields of economics,

ecological economics, technology and the environment, it explains the myth of efficiency and explores its implications for resource usage (particularly oil). It is a must-read for policymakers, natural resource managers, academics and students concerned with the effects of efficiency on resource use.

In *Perceiving God*, William P. Alston offers a clear and provocative account of the epistemology of religious experience. He argues that the "perception of God"—his term for direct experiential awareness of God—makes a major contribution to the grounds of religious belief. Surveying the variety of reported direct experiences of God among laypersons and famous mystics, Alston demonstrates that a person can be justified in holding certain beliefs about God on the basis of mystical experience. Through the perception that God is sustaining one in being, for example, one can justifiably believe that God is indeed sustaining one in being. Alston offers a detailed discussion of our grounds for taking sense perception and other sources of belief—including introspection, memory, and mystical experience—to be reliable and to confer justification. He then uses this epistemic framework to explain how our perceptual beliefs about God can be justified. Alston carefully addresses objections to his chief claims, including problems posed by non-Christian religious traditions. He

also examines the way in which mystical perception fits into the larger picture of grounds for religious belief. Suggesting that religious experience, rather than being a purely subjective phenomenon, has real cognitive value, *Perceiving God* will spark intense debate and will be indispensable reading for those interested in philosophy of religion, epistemology, and philosophy of mind, as well as for theologians.

Building on the form-critical assessment of the Lukan ascension story (LK 24:50-53; Acts 1:1-12) as a rapture story, and motivated by the consideration that the 'monotheistic principle' almost inevitably must have led to a reestimate of the meaning and function of rapture in comparison with heathen rapture stories (immortalisation and deification!), the present study seeks to investigate the Lukan ascension story in the light of the first-century Jewish rapture traditions (Enoch, Elijah, Moses, Baruch, Ezra, etc.). The author argues that first-century Judaism provides a more plausible horizon of understanding for the ascension story than the Graeco-Roman rapture tradition, and that Luke develops his 'rapture christology' not as a reinterpretation of the primitive exaltation kerygma (G. Lohfink), but as a response to the eschatological question, i.e. the delay of the parousia, so as to secure the unity of salvation history.
