Eddas and Sagas

Penguin UK
Since natural
languages exist in two
different modalities -
the visual-gestural
modality of sign

languages and the auditory-oral modality of spoken languages – it is obvious that all fields of research in modern linguistics will benefit from research on sign languages. Although previous studies have provided important insights into a wide range of phenomena of sign languages, there are still many aspects of sign languages that have not yet been investigated thoroughly. The structure of subordinated clauses is a case in point. The study of these complex syntactic structures in the visual-gestural modality adds to our understanding of linguistic variation in the domain of subordination. Moreover, it offers new empirical and

theoretical evidence concerning possible structures and functions of subordination in natural languages. And last but not least, it answers the question to what extent the corresponding morphosyntactic and prosodic strategies depend on the modality of articulation and perception. This volume represents the first collection of papers by leading experts in the field investigating topics that go beyond the analysis of simple clauses. It thus contributes in innovative ways to recent debates about syntax, prosody, semantics, discourse structure, and information structure and their complex interrelation.

Walter de Gruyter GmbH & Co KG
 Based on the Workshop on Prosody and Meaning in Barcelona on September 17-18, 2009, this volume brings together researchers working on issues of the prosodic encoding and expression of sentence-level meaning. The contributions to the book result from a vivid exchange of research ideas and research methodologies on issues related to the relationship between prosody and meaning and from stimulating discussions and collaborative work between researchers coming from different perspectives.
Finnish: An Essential Grammar Routledge

The discovery of the importance of sign language in the deaf community is very recent indeed. This book provides a study of the communication and culture of deaf people, and particularly of the deaf community in Britain. The authors' principal aim is to inform educators, psychologists, linguists and professionals working with deaf people about the rich language the deaf have developed for themselves - a language of movement and space, of the hands and of the eyes, of abstract communication as well as iconic story telling. The first chapters of the book discuss the history of sign language use, its social aspects and the issues

surrounding the language acquisition of deaf children (BSL) follows, and the authors also consider how the signs come into existence, change over time and alter their meanings, and how BSL compares and contrasts with spoken languages and other signed languages. Subsequent chapters examine sign language learning from a psychological perspective and other cognitive issues. The book concludes with a consideration of the applications of sign language research, particularly in the contentious field of education. There is still much to be discovered about sign language and the deaf community, but the authors have succeeded in providing

an extensive framework on which other researchers can build, from which professionals can develop a coherent practice for their work with deaf people, and from which hearing parents of deaf children can draw the confidence to understand their children's world.

Dieses Wörterbuch umfasst diejenigen Wörter aus allen lebenden und toten Sprachen der indoeuropäischen Sprachfamilie, die einen vermeintlich gleichen Ursprung haben, und führt sie auf eine prototypische Form zurück. Der Lexikograph Stuart E.

Mann rekonstruiert damit den Zustand, den eine mögliche indoeuropäische Ursprungssprache gehabt haben könnte, bevor sie im Laufe der Geschichte zu dem heute vorhandenen Sprachenkomplex ausdifferenziert wurde.

The Meaning of Space in Sign Language

Walter de Gruyter GmbH & Co KG
For several reasons, mostly inherent to the different developments of generative grammar, an increasing number of publications have dealt with reduplication in the past 20 years. Reduplication lends itself perfectly as a test field for theories that opt for a non-segmental organization of phonology and morphology. As it happens frequently,

then, the discussion centers around a rather small set of data for which alternative analysis are offered, and which themselves are intended to contribute to the foundation of new theoretical developments. The present volume (which goes back to a conference on reduplication at the University of Graz, Austria) offers a broader approach to reduplication not only from different theoretical viewpoints, but especially for its phenomenology. Across theories a number of highly qualified authors deal with formal and functional perspectives, with typological properties, with semantics, comparative issues,

the role of reduplication in language acquisition, the acquisition of reduplicative systems, sign languages, creoles and pidgins, general grammatical and cognitive principles; the picture is completed by a series of language or language-family specific studies as on Uto-Aztecan, Salish, Tupi-Guarani, Moroccan and Cairene Arabic, various African languages, Chinese, Turkish, Indo-European, languages from India, etc. The overall scope of the conference was to contribute to a new level of discussion of the phenomenon, across theories and across specializations and interests. Sign Language Research, Uses and Practices Walter de Gruyter GmbH & Co KG Sign languages are non-written languages. Given that the use of digital media and video recordings in documenting sign languages started only some 30 years ago, the life stories of Deaf elderly signers born in the 1930s-1940s have – except for a few scattered fragments in film – not been documented and are therefore under serious threat of being lost. The chapters compiled in this volume document important aspects of past and present experiences of elderly Deaf signers across Europe, as well as in Israel and the United States. Issues addressed include (i) historical events and

how they were experienced by Deaf people, (ii) issues of identity and independence, (iii) aspects of language change, (iv) experiences of suppression and discrimination. The stories shared by elderly signers reveal intriguing, yet hidden, aspects of Deaf life. On the negative side, these include experiences of the Deaf in Nazi Germany and occupied countries and harsh practices in educational settings, to name a few. On the positive side, there are stories of resilience and vivid memories of school years and social and professional life. In this way, the volume contributes in a significant way to the preservation of the cultural and linguistic

heritage of Deaf communities and sheds light on lesser known aspects against an otherwise familiar background. This publication has been made possible within the SIGN-HUB project, which has received funding from the European Union's Horizon 2020 research and innovation programme.

The Song of Spring

Helmut Buske Verlag

It has been argued that properties of the visual-gestural modality impose a homogenizing effect on sign languages, leading to less structural variation in sign language structure as compared to spoken language structure. However, until recently, research on sign languages was limited to a number of

(Western) sign languages. Before we can truly answer the question of whether modality effects do indeed cause less structural variation, it is necessary to investigate the similarities and differences that exist between sign languages in more detail and, especially, to include in this investigation less studied sign languages. The current research climate is testimony to a surge of interest in the study of a geographically more diverse range of sign languages. The volume reflects that climate and brings together work by scholars engaging in comparative sign linguistics research. The 11 articles discuss data from many

different signed and spoken languages and cover a wide range of topics from different areas of grammar including phonology (word pictures), morphology (pronouns, negation, and auxiliaries), syntax (word order, interrogative clauses, auxiliaries, negation, and referential shift) and pragmatics (modal meaning and referential shift). In addition to this, the contributions address psycholinguistic issues, aspects of language change, and issues concerning data collection in sign languages, thereby providing methodological guidelines for further research. Although some papers use a specific theoretical framework for

analyzing the data, the volume clearly focuses on empirical and descriptive aspects of sign language variation.

Educational videos are becoming an increasingly popular medium for transferring knowledge at universities. To ensure that all students have adequate access to the teaching content, the videos need to be provided in a manner that is barrier-free and accessible to all. Based on a careful planning process including the participation of affected persons, the following four components of accessibility are to be realized: audio description, translation

into German Sign Language (DGS), captions and transcription. What exactly has to be considered and how are the different components implemented? In this compendium, the team of the project “Learning to Read Data for All (DaLeLe4All)” bundles gathered insights for producing barrier-free and accessible videos with a focus on advice from practical experience. In particular, it covers the process of auditory and visual planning of the contents as well as the coordination and implementation of the individual components. *Penguin Readers Level 2: The Little Prince (ELT Graded Reader)* John Benjamins Publishing Company This second edition of

Finnish: An Essential Grammar has undergone profound revisions. The chapter on basic sentence structure has been rewritten and syntax has been given more space. Sections have been added on phrase types, simple clause types, and types of complex sentences. A section on discourse particles has been added. The vocabulary of the copious example sentences has been updated to give it a touch of the twenty-first century. The section on modern colloquial Finnish has been considerably expanded. Internet addresses helpful for any learner of Finnish are provided which make it possible to automatically analyse the grammatical structure of any Finnish

words and sentences. It gives not only a systematic account of the structures of the written language, but also features the characteristics of colloquial Finnish. No prior knowledge is assumed on the part of the reader and grammatical rules are clearly explained without jargon. Features include: pronunciation guide, including the tendencies in present-day colloquial Finnish thorough descriptions of morphology (word structure) and syntax (sentence structure) clear rules and an abundance of concrete examples inflection tables subject index internet addresses to online software for grammatical analysis of Finnish. This is the ideal reference source

both for those studying Finnish independently and for students in schools, colleges, universities and adult classes of all types.

Lexical Nonmanuals in German Sign Language

Walter de Gruyter
Research on

nonmanual elements – or ‘nonmanuals’ – in sign languages has focused on both the possible functions and the occurrence

(frequency and form)

of these elements in recent years. As a

matter of fact, research on

nonmanuals is still a quite uncharted

territory in Austrian Sign Language (ÖGS)

today, which has also initiated the study

given. In order to identify head and body

movements in ÖGS, these nonmanuals

were determined and

analyzed functionally via a new user-oriented methodology. Getting feedback of multiple native signers was a main part of this

method. Accordingly, you will find the findings of this study in this volume: various

functions such as negation, assertion, interrogativity,

conditionality, and many more can be

expressed nonmanually. Brand

new insights into sign language research are given, as well as

astonishing results: even (epistemic)

modality can be expressed by particular

head and body movements.

together can make anything possible. *Azerbaijani Vocabulary for English Speakers - 7000 Words* Walter de Gruyter GmbH & Co KG
Bringing together the research fields of sign language linguistics and information structure, this book focuses on the realization of modal particles and focus particles in three European sign languages: German Sign Language, Sign Language of the Netherlands, and Irish Sign Language. As a cross-linguistic investigation based on a systematic methodological approach, the study analyzes the results particularly with regard to nonmanual features expressed by articulators such as the body, head, and face.

The analyses of the data provide interesting insights into the syntax-prosody interface in sign languages and the interaction of syntax and prosody in general. Modal and focus particles have not been thoroughly investigated in sign languages. This volume presents the first study on this phenomenon and is thus an innovative contribution to the field. From a methodological and theoretical perspective, it draws on up-to-date linguistic tools and provides professionally elicited and annotated data. The book accounts for the results within existing theoretical models. Given its specific focus on nonmanuals, the book

contributes to recent debates on information structure and the syntax-prosody interface and will be of special interest to both sign and spoken language linguists. Sign Language Franklin Watts

from sentence to larger units such as text and discourse and accordingly from syntax to semantics and pragmatics. This has led to the development and application of corresponding discourse semantic and pragmatic theories such as, for instance, (S)DRT, Centering Theory, Accessibility Theory, QUD, Generalized Conversational Implicatures, Super Monsters and Gesture Semantics and new empirical approaches in the framework of experimental semantics and pragmatics or corpus linguistic discourse analysis. The contributions to this collected volume build on these developments and investigate the

linguistic foundations of narration from various perspectives. The contributions address topics such as speech and thought representation, free indirect speech, information structure, anaphora resolution, co-speech gestures, classifier constructions as well as role shift and constructed action. The volume provides new insights in the linguistic structures underlying narration in written, spoken, and sign languages from an experimental, developmental, historical, typological, and theoretical perspective. The contributions will appeal to theoretical linguists, sign language linguists, typologists, literary scholars, psycholinguists, and philosophers.

Over the past decades, the field of sign language linguistics has expanded considerably. Recent research on sign languages includes a wide range of subdomains such as reference grammars,

theoretical linguistics, psycho- and neurolinguistics, sociolinguistics, and applied studies on sign languages and Deaf communities. The SLDC series is concerned with the study of sign languages in a comprehensive way, covering various theoretical, experimental, and applied dimensions of sign language research and their relationship to Deaf communities around the world. The series provides a multidisciplinary platform for innovative and outstanding research in sign language linguistics and aims at linking the study of sign languages to current trends in modern linguistics, such as new experimental and

theoretical investigations, the importance of language endangerment, the impact of technological developments on data collection and Deaf education, and the broadening geographical scope of typological sign language studies, especially in terms of research on non-Western sign languages and Deaf communities.
