What happens to "orphan" diseases that aren't big enough profit centers for the pharmaceutical industry or get caught

in the web of government funding and academic research? Augie Nieto found out in the spring of 2005: At forty-seven years old he was diagnosed with ALS. Devastated, Augie struggled with depression and attempted suicide. When he awoke from a coma, with friends and family surrounding him, his sense of faith and mission were renewed. Fast-forward one year: Augie and his wife, Lynne, were profiled as "Real Heroes" on the Today show. Their determination to beat the disease had already led to major overhauls in the way ALS research was conducted. In partnership with the Muscular Dystrophy Association, Augie had

set up a foundation and lab to coordinate and oversee ALS research and testing across the globe. By centralizing operations and championing an entrepreneurial approach to medical research, Augie and his team accomplished remarkable results in less than two years. Part inspiration, part business innovation, Augie's Quest illustrates how one person can make a meaningful difference. Praise for Augie Nieto: George H. W. Bush, former U.S. president: "Your contributions to the fitness industry are well known, and your dedication an inspiration." Lance Armstrong, seven-time "Le Tour de France" champion: "I think it says a lot about Augie, the fact that everybody

came together regardless of whether or not it's for competing gyms or competing companies that make equipment. They all say, this is one of our own; this is a guy who's committed his life to our industry and has been dealt a serious blow. We're going to be there for him, we're going to say, we're here for you and we're part of the Quest." Arnold Schwarzenegger, governor of California: "Your success has been incredible. But you are so much more than just a successful businessman. You are the greatest husband, a great father, and a terrific friend. PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly

as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need hardly say that any suggestions addressed to the case of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to

dispel this idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is dependent on nothing but enough wind to curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, - and can make his arrangements for a day, weeks beforehand whereas the stream-fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of

a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, -such as many of our northern streams are, - the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and

the other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we dont deny that. In an

untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing... New York Teachers College Press Providing a strong counter voice to today's standards-based reform, this book features powerful ideas on teacher education, curriculum, and school administration in an accessible lecture style by Larry Cuban, an experienced teacher, administrator, and acclaimed author. Based on Cuban's Julius and Rosa Sachs Lectures for 2001-2002, this volume is a must-read for everyone interested in improving our schools. AIA Guide to the Twin Cities St. Martin's

The future of learning depends absolutely on the future of teaching. In this latest and most important collaboration, Andy Hargreaves and Michael Fullan show how the quality of teaching is captured in a compelling new idea: the professional capital of every teacher working together in every school. Speaking out against policies that result in a teaching force that is inexperienced, inexpensive, and exhausted in short order, these two world authorities--who know teaching and leadership inside out--set out a groundbreaking new agenda to transform the future of teaching and public education. Ideas-driven, evidence-

based, and strategically powerful, Professional Capital combats the tired arguments and stereotypes of teachers and teaching and shows us how to change them by demanding more of the teaching profession and more from the systems that support it. This is a book that no one connected with schools can afford to ignore. This book features: (1) a powerful and practical solution to what ails American schools; (2) Action guidelines for all groups--individual teachers, administrators, schools and districts, state and federal leaders; (3) a next-generation update of core themes from the authors' bestselling book, "What's Worth Fighting for in Your

School?" [This book was co-published with the Ontario Principals' Council.].

Currently, many states are adopting the Next Generation Science Standards (NGSS) or are revising their own state standards in ways that reflect the NGSS. For students and schools, the implementation of any science standards rests with teachers. For those teachers, an evolving understanding about how best to teach science represents a significant

transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach. That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science, their familiarity with a range of instructional strategies, and the skills to implement those strategies in the classroom. Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers' learning across their careers, from their initial training to continuing professional development. A teacher's capability to

improve students' scientific understanding is heavily influenced by the school and district in which they work, the community in which the school is located, and the larger professional communities to which they belong. Science Teachers' Learning provides guidance for schools and districts on how best to support teachers' learning and how to implement successful programs for professional development. This report makes actionable recommendations for science teachers' learning that take a broad view of what is known about science education, how and when teachers learn, and education policies that directly and

indirectly shape what teachers are able to learn and teach. The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers. Science Teachers' Learning will be a valuable resource for classrooms, departments, schools, districts, and professional organizations as they move to new ways to teach science. The recent development of light

rail transit in the Twin Cities has been an undeniable success. Plans for additional lines progress, and our ways of shopping, dining, and commuting are changing dramatically. As we embrace riding the new Hiawatha light rail line, an older era comes to mind—the age when everyone rode the more than 500 miles of track that crisscrossed the Twin Cities. In *Twin Cities by Trolley*, John Diers and Aaron Isaacs offer a rolling snapshot of Minneapolis and St. Paul from the 1880s to the 1950s, when the streetcar system shaped the growth and character of the entire metropolitan area. More than 400 photographs and 70 maps let the reader follow the tracks from

Stillwater to University Avenue to Lake Minnetonka, through Uptown to downtown Minneapolis. The illustrations show nearly every neighborhood in Minneapolis and St. Paul as it was during the streetcar era. At its peak in the 1920s and early 1930s, the Twin City Rapid Transit Company (TCRT) operated over 900 streetcars, owned 523 miles of track, and carried more than 200 million passengers annually. Recounting the rise and fall of the TCRT, *Twin Cities by Trolley* explores the history, organization, and operations of the streetcar system, including life as a streetcar operator and the technology, design, and construction of the cars. Inspiring fond

memories for anyone who grew up in the Twin Cities, *Twin Cities by Trolley* leads readers on a fascinating and enlightening tour of this bygone era in the neighborhood and the city they call home. John W. Diers has worked in the transit industry for thirty-five years, including twenty-five years at the Twin Cities Metropolitan Transit Commission. He has written for *Trains*, and has served on the board of the Minnesota Transportation Museum. Aaron Isaacs worked with Metro Transit for thirty-three years. He is the author of *Twin City Lines—The 1940s* and *The Como-Harriet Streetcar Line*. He is also the editor of *Railway Museum Quarterly*.

"Biochar is the carbon-rich product when biomass (such as wood, manure, or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil

amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics

and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines"--Provided by publisher.
