### Reading in the Science Classroom Oswaal Books

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery—from the Big Bang through the end of time. \*Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

### Physical Chemistry Oswaal Books

A groundbreaking history of the human mind told through our experience of dreams—from the earliest accounts to current scientific findings—and their essential role in the formation of who we are and the world we have made. "A resounding case for the mystery, beauty and cognitive importance of dreams." —The New York Times  
 What is a dream? Why do we dream? How do our bodies and minds use them? These questions are the starting point for this unprecedented study of the role and significance of this phenomenon. An investigation on a grand scale, it encompasses literature, anthropology, religion, and science, articulating the essential place dreams occupy in human culture and how they functioned as the catalyst that compelled us to transform our earthly habitat into a human world. From the earliest cave paintings—where Sidarta Ribeiro locates a key to humankind's first dreams and how they contributed to our capacity to perceive past and future and our ability to conceive of the existence of souls and spirits—to today's cutting-edge scientific research, Ribeiro arrives at revolutionary conclusions about the role of dreams in human existence and evolution. He

explores the advances that contemporary neuroscience, biochemistry, and psychology have made into the connections between sleep, dreams, and learning. He explains what dreams have taught us about the neural basis of memory and the transformation of memory in recall. And he makes clear that the earliest insight into dreams as oracular has been elucidated by contemporary research. Accessible, authoritative, and fascinating, The Oracle of Night gives us a wholly new way to understand this most basic of human experiences.

The majority of public school principals are now required to

supervise and evaluate early childhood teachers and classrooms, yet many do not have a sufficient understanding of child development and early childhood pedagogy to lead for equity. This practical and comprehensive resource addresses this critical gap by presenting current research on child development, an understanding of the elements of high-quality early childhood classrooms, essential information on trauma-responsive practices, and strategies for reducing bias and preventing the use of exclusionary discipline with young children. School leaders learn about the pivotal role they can play in improving equity for young children, their families, and the early childhood workforce. Each chapter includes key take-aways and central questions that can be used for individual reflection or to guide group discussions. Authentic examples, illustrations, and actionable strategies help readers to successfully implement the content in their school. Principals as Early Learning Leaders is essential reading for principals, vice principals, administrators, and others responsible for leading preschool and pre-K programs for equity. The first IUPAC Manual of Symbols and Terminology for Physicochemical Quantities and Units (the Green Book) of which this is the direct successor, was published in 1969, with the object of 'securing clarity and precision, and wider agreement in the use of symbols, by chemists in different countries, among physicists, chemists and engineers, and by editors of scientific journals'. Subsequent revisions have taken account of many developments in the field, culminating in the major extension and revision represented by the 1988 edition under the simplified title Quantities, Units and Symbols in Physical Chemistry. This 2007, Third Edition, is a further revision of the material which reflects the experience of the contributors with the previous editions. The book has been systematically brought up to date and new sections have been added. It strives to improve the exchange of scientific information among the readers in different disciplines and across different nations. In a rapidly expanding volume of scientific literature where each discipline has a tendency to retreat into its own jargon this book attempts to provide a

readable compilation of widely used terms and symbols from many sources together with brief understandable definitions. This is the definitive guide for scientists and organizations working across a multitude of disciplines requiring internationally approved nomenclature.

Nelson Slade Bond (1908-2006) had a remarkable career as a science fiction writer. He wrote extensively for books, radio, television and the stage, and especially the pulp magazines. Like Ray Bradbury, he did his journeyman work in the science fiction pulps before graduating to the higher-paying "slick" magazines like Bluebook. The quality of his work was such that Arkham House, Gnome Press, Prime Press, and Doubleday issued collections of his early short stories. At Wildside Press, we were fortunate enough to work with him in his twilight years, and we reprinted his "Lancelog Biggs, Spaceman" collection, as well as a solo work, "That Worlds May Live," and made him the Featured Author of an early issue of Adventure Tales magazine. This volume includes: TROUBLE ON TYCHO SHADRACH THE LORELEI DEATH BEYOND LIGHT CAPTAIN CHAOS COLOSSUS OF CHAOS DICTATOR OF TIME LIGHTER THAN YOU THINK REVOLT ON IO THE BALLAD OF VENUS NELL THE CASTAWAY THE ULTIMATE SALIENT THE BALLAD OF BLASTER BILL If you enjoy this volume, search your favorite ebook store for "Wildside Press MEGAPACK" to see the 400+ other entries in the series, covering science fiction, modern authors, mysteries, westerns, classics, adventure stories, and much, much more!
