This lost classic by famous anthropological theorist Leslie A. White, published now for the first time, represents twenty-five years of his scholarship on the anthropology of modern capitalism. Drawing out his now classic formulations of social organization, cultural evolution, and the relationship between technology, ecology, and culture, this major theoretical work traces a vast expanse of history from the earliest forms of

capitalism to the detailed inner workings of contemporary democratic institutions. A substantial foreword by Burton J. Brown, Benjamin Urish, and Robert Carneiro both situates this posthumous work within the history of anthropological theory and shows its importance to contemporary debates within the discipline.

The Marine Chronometers at Greenwich is the fifth, and largest, of the distinguished series of catalogues of instruments in the collections of the National Maritime Museum. Housed at the Royal Observatory Greenwich — the 'home of time' and the Prime Meridian of the world — this extraordinary collection, which includes the celebrated marine timekeepers by John Harrison (1693-1776), is generally considered to be the finest of its kind in existence. The book is however much more than just a catalogue, and includes an accessible and engaging history of the chronometer, revealing why these instruments were important in our scientific and cultural history, and explaining, in simple terms, how they worked and were used. A comprehensive Glossary and Bibliography are included to ensure any technicalities are explained and that the reader has suggestions for useful 'further reading'. Over 480 photographs and illustrations, including many fine macro-photographs and line drawings, illustrate the 'jewel-like' beauty of the chronometer's construction and explain the function and subtleties of its mechanism. A

chapter on 'How the Chronometer was Made', describes the fine sub-division of labour used to create these special machines, from bare metal, right up to delivery on board ship, and brief biographies of the makers tell the human story behind this important nineteenth-century industry. Another chapter, 'The Evolution of the Chronometer', aimed at collectors, historians and curators, provides clearly structured information on assessing and dating the chronometer, something many find difficult. And, for the dedicated specialist, there is extensive tabulated data on the technical structure of this important collection, a unique resource for future research.

In the Event of a Water Landing At 8:15 A.M. on October 14, 1947, Chuck Martin, the 26-year-old pilot of the Boeing 314 flying boat named Bermuda Sky Queen, attempted to do what had never been done before - land an 88,000 pound aircraft in thirty-five-foot high seas. The lives of sixty-eight passengers and crew on board depended on his ability. A mile away was the 327-foot US Coast Guard Cutter George M. Bibb. The cutter's crew watched as the plane descended. If Sky Queen survived the landing, getting the passengers to safety would be their job. Nine years later and half a world away, Captain Richard Ogg, flying the Pan American Airways Stratocruiser Sovereign of the Skies, was forced ditch the aircraft along with its forty-three

passengers and crew. The Coast Guard was nearby. Manning Ocean Station November was the US Coast Guard Cutter Pontchartrain. Once more, rescuing the survivors would be in their hands. In the Event of a Water Landing tells for the first time the full stories of the Bermuda Sky Queen and Sovereign of the Skies rescues, the only two completely successful open ocean ditchings in Commercial Aviation history. These two stories encompass many facets of ditchings: bad weather, engine failure, horrific sea conditions, and indomitable courage in the face of death. Between these two are tales of other ditchings as well as the journey we humans have undertaken from the beginning of transoceanic flight to today. Using the voices of passengers, flight crew, and those who rescued them, an amazing tale unfolds. Their vivid memories, interspersed with contemporary news reports, serve to flesh out the unemotional entries from official investigations. These ditchings and rescues embody the hopes, fears, and courage of people facing death hundreds of miles from land and the audacity of the men who risked their own lives to save them.

The Hesperian

Before radar, depth finders and satellite-guided navigation, long before the seafloor was charted with scientific precision, mariners relied on lighthouses to approach a coastline safely. South Carolina's history with lighthouses goes back nearly two and a half centuries. At Cape Romain, a windmill was converted into a lighthouse. St. Philip's Church in Charleston was converted into a beacon for seafarers to aid navigation to the Holy City. With such a long and storied past, the story of South Carolina's lighthouses is inseparable from its maritime history. Join author John Hairr as he recounts the fascinating history of these beacons that have shone above the shores of the Palmetto State.
