APPEARING LIVE AT THE FINAL TEST is an intense hybrid of contemporary real-world drama and mythic science fiction about a black newsstand operator, his wife and three neighbors in a Brooklyn-like neighborhood, whose lives take a cosmic punch from a nuclear bomb threat that launches them on an eerie and spellbinding journey. "APPEARING LIVE AT THE FINAL TEST is an extremely well-written novel--a pleasure to read, a wild ride of depression at some points, exhilaration at others. John Teton has raised some serious concerns regarding the fate of civilizations, and our consciousness is raised with this thought-provoking work." Eric Chaisson, Author, COSMIC EVOLUTION Professor of Astronomy and Physics, Tufts University Director, Wright Center for Science Education "APPEARING LIVE AT THE FINAL TEST is a genre-breaking story unlike any other. Its scenes range from a

scarily realistic depiction of an urban nuclear event to mind-stretching intergalactic travel,;all related in the author's savvy, wisecracking, original and sometimes hilarious hyperbolic voice." Craig A. Lambert, Ph.D.; Deputy Editor, HARVARD MAGAZINE Mr. Teton gives fictionalized treatment to "cosmic evolution," a complex and controversial theory which holds that evolution affects not just life on Earth, but extends back to the birth of the universe and continues to include changes in human civilization, culture, technology and beyond. The story benefits from a grounding in everyday human fears and troubles, along with mind-blowing scenes which venture into questions about creation and the role of human beings in it. The novel is chock-full of information about stars and the planets, and yet he clearly knows a thing or two about teenagers, old folks, sailing, marine biology, marriage, love, pop culture, terrorism, religious extremists and the media. Written by experts that include originators of some key ideas, chapters in the Handbook of Multiple Testing cover multiple comparison problems big and small, with guidance toward error rate control and insights on how principles developed earlier can be applied to current and emerging problems. Some highlights of the

coverages are as follows. Error rate control is useful for controlling the incorrect decision rate. Chapter 1 introduces Tukey's original multiple comparison error rates and point to how they have been applied and adapted to modern multiple comparison problems as discussed in the later chapters. Principles endure. While the closed testing principle is more familiar, Chapter 4 shows the partitioning principle can derive confidence sets for multiple tests, which may become important as the profession goes beyond making decisions based on p-values. Multiple comparisons of treatment efficacy often involve multiple doses and endpoints. Chapter 12 on multiple endpoints explains how different choices of endpoint types lead to different multiplicity adjustment strategies, while Chapter 11 on the MCP-Mod approach is particularly useful for dose-finding. To assess efficacy in clinical trials with multiple doses and multiple endpoints, the reader can see the traditional approach in Chapter 2, the Graphical approach in Chapter 5, and the multivariate approach in Chapter 3. Personalized/precision medicine based on targeted therapies, already a reality, naturally leads to analysis of efficacy in subgroups. Chapter 13 draws attention to subtle logical issues in inferences on subgroups and their mixtures, with a principled solution that resolves these issues. This chapter has implication toward meeting the ICH E9 R1 Estimands requirement. Besides the mere multiple testing methodology itself, the handbook also covers related topics like the statistical task of model selection in Chapter 7 or the estimation of the proportion of true null hypotheses (or, in other words, the signal prevalence) in Chapter 8. It also contains decision-

theoretic considerations regarding the admissibility of multiple tests in Chapter 6. The issue of selected inference is addressed in Chapter 9. Comparison of responses can involve millions of voxels in medical imaging or SNPs in genome-wide association studies (GWAS). Chapter 14 and Chapter 15 provide state of the art methods for large scale simultaneous inference in these settings. *Technoliteracy, Discourse, and Social Practice: Frameworks and Applications in the Digital Age* Carson-Dellosa Publishing This book constitutes the refereed proceedings of the 20th International Conference on Product-Focused Software Process Improvement, PROFES 2019, held in Barcelona, Spain, in November 2019. The 24 revised full papers 4 industry papers, and 11 short papers presented were carefully reviewed and selected from 104 submissions. The papers cover a broad range of topics related to professional software development and process improvement driven by product and service quality needs. They are organized in topical sections on testing, software development, technical debt, estimations, continuous delivery, agile, project management, microservices, and continuous experimentation. This book also includes papers from the co-located events: 10 project papers, 8 workshop papers, and 4 tutorial summaries. There is commonly-held belief that some people learn better than others because they are born that way. However, research indicates that many people who learn better are simply more strategic: they use effective strategies and techniques to improve their learning. Further, these strategies and techniques can be taught to students.

Thus, understanding how we learn enriches our lives and the lives of others. Written by leading experts on learning, this book situates this topic within the broader context of educational psychology research and brings it to a wider audience. With chapters on how the mind works, evidence-based recommendations about how to enhance learning from both the perspective of students and teachers, and clear explanations of key learning concepts and ideas, this short volume is designed for any education course that includes learning in the curriculum. It is indispensable for pre- and in-service teachers and student researchers alike.

This book comprises select peer-reviewed proceedings of the medical challenge - C-NMC challenge:

Classification of normal versus malignant cells in B-ALL white blood cancer microscopic images. The challenge was run as part of the IEEE International Symposium on Biomedical Imaging (IEEE ISBI) 2019 held at Venice, Italy in April 2019. Cell classification via image processing has recently gained interest from the point of view of building computer-assisted diagnostic tools for blood disorders such as leukaemia. In order to arrive at a conclusive decision on disease diagnosis and degree of progression, it is very important to identify malignant cells with high accuracy. Computer-assisted tools can be very helpful in automating the process of cell segmentation and identification because morphologically both cell types appear similar. This particular challenge was run on a curated data set of more than 14000 cell images of very high quality. More than 200 international teams participated in the challenge. This book covers various solutions using machine learning and deep learning approaches. The book will prove useful for academics, researchers, and professionals interested in building low-cost automated diagnostic tools for cancer diagnosis and treatment.

“This profusely illustrated and thoroughly researched book conveys a wealth of information” about the USAF’s B-1 bomber (Aviation History Magazine). When the B-52 Stratofortress entered operational service with the US Air Force in 1955, work was already underway on defining its successor. The B-70 Valkyrie, a Mach 3 jet bomber, was one option. Although two XB-70A prototypes flew, the B-70 never went into production. Out

of the subsequent Advanced Manned Strategic Aircraft program came the B-1A bomber, which flew at high speed and low altitude to evade enemy air defenses. But the B-1A was cancelled in favor of fitting the B-52 with cruise missiles. The B-1, known as the BONE, was revived in 1981 as the improved B-1B to boost American military power and serve as a symbol of American strength at the peak of Cold War tensions. The B-1B entered service in 1986 with several deficiencies. The resolution of most of these issues coincided with the end of the Cold War. After the Cold War, the B-1B lost its primary nuclear mission but remained relevant by transforming into a high-speed, long-range, high-payload delivery platform for conventional precision-guided munitions. The first combat use of the B-1B was in 1998 in Iraq. The BONE has proved a highly effective combat aircraft in Afghanistan, Iraq, Libya, Syria, and the former Yugoslavia. This extensively illustrated book traces the BONE’s long development and operational history in detail. “A must-read book . . . a great reference for historians, pilots, engineers, and even policy makers. Both the writing and photos are excellent.” —Air & Space Power History

Annual Report of the State Board of Live Stock Commissioners ... Springer Nature

All astrophysicists are acquainted with the fundamental works of S. Chandrasekhar [6] and M. Schwarzschild [1] concerning the internal structure of stars. Although both of these works accentuate the principal mathematical devices of the theory (and use, for this reason, notations that are rather perplexing for the non-specialist), the work of Schwarzschild is distinguished by care in demonstrating the physical

meaning of the principal equations, while that of Chandrasekhar makes every effort not to skip a single step in the calculations. On the other hand, Schwarzschild, who considers his two introductory chapters as simple reviews of results which are already known, passes a bit rapidly over certain difficult arguments, and Chandrasekhar never goes far enough in the analysis of the physical mechanisms involved. From another point of view, the excellent review articles published in the Encyclopedia of Physics [5] by M. H. W. W. Rubel, P. Ledoux, and others, and those published in Stars and Stellar Systems [4] by H. Reeves, B. Stromgren, R. L. Sears and R. R. Brownlee, and others, are principally intended for research workers who are already initiated into the theory of internal structure. These

monographs are on a level that is clearly too high for the general physicist who is approaching these astrophysical questions for the first time, and more particularly for the post-graduate student.
